passive components

KOA SPEER ELECTRONICS, INC.

KOA SPEER ELECTRONICS, INC.

From Concept to Reality

Our wide range of passive component solutions will help you make the leap

Whether you're designing the car of tomorrow or connecting the Internet of Things, you need cutting-edge product solutions to bring your design to fruition. At KOA Speer, we're the ideal partner to help you do just that. Our constantly expanding line of passive components will give you the solution to make your concept a reality!

Quality 1st

You expect product quality from any component that makes it into one of your designs. But in today's competitive global marketplace, there's so more to the quality equation. At KOA Speer, our Quality 1st initiative reinforces our organization wide focus on serving you at the highest possible level.

ISO 9001:2015 CERTIFIED IATF16949:2016 CERTIFIED

Our commitment to quality in everything we do is paying off... in the past two years we've received ten major customer quality awards. We're the industry's most recognized and awarded supplier for achieving the highest product quality, on-time delivery and responsive customer service.

KOA SPEER... More Than Just Resistors

Resistors

Current Sense Resistors Selection Guide

KOA offers complete family of Current Sense Resistors capable of sensing large to small currents with ultra-low resistance

Applications: Current management sensor including charge/discharge of secondary batteries • Current control sensor of motors and DC/DC converters • Circuit protecting sensor by overcurrent detection

Current Sense Resistors

Current Ratings (A)

Specifications

		Current Ratings (A)	Resistance	Rated Power	Size	Tolerance
		1 – 10 – 100 – 1000				
Large Current Shunt Resistors • Metal Plate Resistive Element • Large Current, High Precision	HSAN2P4015 	600	0.1m/0.2mΩ	18W/36W	40x15mm	±5%
		0.1 – 1 – 10 – 100 Current (A)	Resistance Range	Rated Power	Size (Inch)	Tolerance
Power Shunt Chip Resistors • Metal Plate Resistive Element • Large Current, High Precision	New PSJ2 	54.8 – 244.9	0.2m~4mΩ	5W~12W	3920	±1%
	New PSL2	126.5 – 212.1	0.2m~0.5mΩ	8W/9W	2512	±1%
	PSG4 	89.4 – 141.4	0.5m/1mΩ	10W/8W	2725	±1%

Alphabetical Index

KOA SPEER ELECTRONICS, INC.

Restrictions of Hazardous Solutions

At KOA, we know taking care of the environment is important. That is why we have taken the steps to ensure we offer a product that fits your needs while adhering to global environmental regulations. In 2006, we complied with the EU's RoHS Directive, allowing us to offer products that are RoHS compliant, and in 2007 we met guidelines outlined in the IT Products Pollution Control Act for the People's Republic of China. In addition, we are now enforcing stricter chemical regulations set by Europe through watching the chemical input of our products. Our laboratory is now ISO/IEC 17025 certified, and we are constantly working to think of ways to improve our technology, such as by offering halogen-free specifications. By actively addressing our environmental impact today, you can be certain KOA will be there in your future.

EU RoHS COMPLIANT

What is EU RoHS?

The Restriction of Hazardous Substances Directive (2002/95/EC), (RoHS), has become effective on July 1 of 2006 requiring the usage restriction of following six hazardous substances in the manufacture of electrical and electronic equipment placed on the market. This directive was amended on 8 June 2011, to Directive 2011/65/EU of the European Parliament and of the Council and each EU member state must adopt it into national law by 2 January 2013. RoHS 2002/95/EC before the amendment is replaced by RoHS 2011/65/EU where the restricted materials or maximum concentration value remain unchanged.

- Lead (0.1wt%)
- Mercury (0.1wt%)
- Cadmium (0.01wt%)
- Hexavalent Chromium (0.1wt%)
- PBBs (Polybrominated biphenyls) (0.1wt%)
- PBDEs (Polybrominated diphenyl ethers) (0.1wt%)

* The percentage in parentheses shows the maximum concentration value in the homogeneous material.

The restriction of applications in the annex in the directive is exempted. KOA's products applicable with this exemption to EU RoHS are as follows (as of July, 2016):

- Copper alloy containing up to 4% lead by weight
- Lead in high melting temperature type solders (i.e. lead-based alloys containing 85% by weight or more lead)
- Electrical and electronic components containing lead in a glass or ceramic other than dielectric ceramic in capacitors, e.g. piezoelectronic devices, or in a glass or ceramic matrix compound.

To meet EU RoHS, you have to choose lead (Pb) free material for termination surface material when our product has both type designation, leaded and lead free.
Please contact our sales representatives for details.

Revised Chinese RoHS

(Management Methods for the Restriction of the Use of Hazardous Substances in Electrical and Electronic Products)

Chinese RoHS became effective in March 2007 and the Revised Chinese RoHS was promulgated in January 2016 and became effective on July first 2016. However, the Compliance management catalogue of the second step (inclusion restriction) is not established at the present moment, so only the first step (obligation for applying identification) is valid.

Index page of this catalog shows the products that contain six hazardous substances less than threshold level, indicated by O-mark.

For each product, we disclose the content information of the six hazardous substances directed by Chinese RoHS. Please contact our sales representatives for details.

REACH

"Regulation concerning the Registration, Evaluation, Authorization and Restriction of Chemicals" (REACH) has been enforced on June 1 of 2007 in EU area.

This regulation is aiming at safety evaluation and risk management of chemical substances, which are required to register according to the amount if used in businesses. Substance of Very High Concern (SVHC) must be registered if it is included in article. Information on such substances is also required through supply chain.

KOA SPEER ELECTRONICS, INC.

Caution & Terms

general precautions

Precautions

All product specifications and data are subject to change without prior notice. Be sure to request and confirm the latest technical specifications before you order or use a part.

The following precautions apply to all products

General

- For precautions in general, refer to "JEITA RCR-1001B Safety application guide on components for using electronic and electrical equipment" issued by JEITA.

Application

- Confirm application parameters before the use of products, and please contact KOA in advance when products are to be used in critical, high-reliability equipment such as transportation (automobiles, airplanes, trains, boats, and ships), medical equipment, space equipment, energy, traffic, and information facilities. Unless the particular conditions and scope of liability is defined in mutually accepted contract documents, KOA will not be liable for issues arising from design or use in these applications.
- Consider sufficient fail-safe design if the products are used in high-reliability applications. Ensure the safety of the whole system by using proactive and redundant circuits to avoid unsafe operation due to a single product failure.

Environment for Use

- Unless otherwise specified, these products are not to be used in special environments. Examine and confirm performance and reliability before you use KOA products in any of the following environments:
  1. Under direct sunlight, exposed to the outside or to dust.
  2. In liquids such as water, oil, organic solvent, or liquid chemicals or in areas where these liquids are used.
  3. In locations where the products are exposed to salt-water breezes or corrosive gases, including SO2, H2S, Cl2, NH3, NO2, etc.
  4. In locations with high static electricity and strong electromagnetic waves.
  5. In locations subject to condensation from dew.
  6. When the products or PCBs are sealed and coated by resin or other coating materials.
  7. In locations where the products are exposed to the fumes of lubricating oil.

Sulfuration

- Products with silver-based electrodes may increase in resistance in atmospheres containing sulfur gases (H2S, SO2, etc.) or when exposed to sulfide compounds. Take anti-sulfur measures in these environments.

Anti-pulse Characteristics

- If transient overloads such as power pulse or voltage/current surges are applied to KOA products, performance and reliability may be degraded. Contact KOA for data on antipulse characterstics and design help.
- Pay attention to discharges between terminations (arc-over) when high voltages are applied.

Storage

- Store KOA products in dust-free areas and keep them away from extreme temperatures; moisture; condensation; direct sunlight; salt-water breezes; corrosive gases such as SO2, H2S, Cl2, NH3, NO2, etc.; or fumes from lubricating oil. Use desiccants if necessary.
- Please contact KOA for conditions and length of storage.

Storage of the Products with Lead-free Termination

- Solderability may degrade faster for products with Pb-free terminals than for products with Pb-bearing terminals.

Mounting

- Avoid physical damage or shock to the products, which may happen by holding them with hard tools like pliers or tweezers or by imperfect mounting-machine alignment. This damage may affect electrical characteristics or lead to disconnection or cracking.
- If the bottom point of the mounting nozzle is too low, a product could be pushed onto the PCB, which may deteriorate electrical characteristics or lead to cracking. Decelerate the nozzle just before mounting, and mount the product after correcting PCB deformations.
- Do not use products that have fallen during mounting or that have already been removed from a PCB.
- Contact KOA if PCBs are molded or sealed by coating material after component mounting.
- Do not stack PCBs after mounting, because this may damage the components.
- The electrical characteristics of film-type resistors and sensors may be changed by electrostatic overvoltage. Keep electrostatic discharge away from components when assembling and handling by monitoring machines and human contact.
- Prevent or eliminate the introductino of ionic substances like salt, salinity, or sweat, as these substances may degrade resistance due to moisture or corrosion.

Soldering

- Perform soldering within the tempreature, time, and number of cycles specified for the product or its precautions. If a product is exposed to high temperatures for long periods of time, its color or electrical characterics may change or disconnection may occur.
- Prevent any external force from being applied to the products until solder has cooled.
- Handle carefully to prevent mechanical stresses, such as from the bending or warping of a PCB, on the solder fillet.
- Confirm that solder flux residue does not affect the product.
- Confirm that components are in place when conductive adhesive is used in place of solder.

Precautions for Soldering with Lead-free Solder

- In Pb-free soldering, temperature may be higher than in the use of eutectic solder. Confirm that soldering is acceptable under actual conditions.
- Solder fillets may lift off double-sided boards with through holes. Confirm the solder strength on actual board material before assembly.

Washing

- Confirm that solder flux residue does not remain after washing, because it may cause deterioration of moisture and corrosion resistance.
- Confirm reliability in advance when using no-clean solder, water, or a soluble agent.
- Since Pb-free solder may contain many ionic materials, use RMA type solder or flux or wash sufficiently.
- Wash thoroughly after soldering to remove ionic substances like sweat and salinity. Control the washing agent appropriately to remove all ionic substances. Consult KOA when using a washing agent such as acid, alkaline, or organic solvent other than alcohol.
- Ultrasonic washing may damage products due to vibration resonance. High hydraulic pressure may also damage products. Ask KOA in advance for washing conditions.
- Dry products thoroughly after washing.

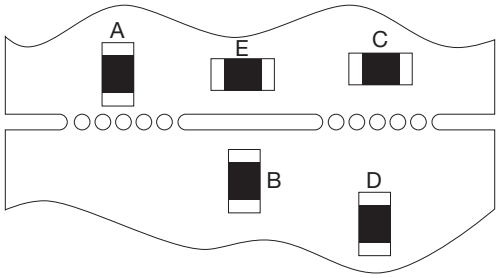
Dispose of the Products

- Observe appropriate laws and regulations for handling and disposal of products or packing materials.

The following precautions apply to surface mount devices

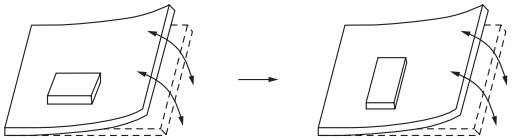
Precautions Related to PCB Bending Stress

- Arrange the long side of chip components parallel with the direction of the smaller coefficient of thermal expansion in anisotropic PCBs.
- Cracking of the solder fillet may occur with thermal cycling, because of mismatch of coefficients of thermal expansion between the board and the component. Pad size, amount of solder, and amount of heat radiating from the PCB must be designed carefully, especially with large components of 5 mm x 2.5 mm or larger.
- If products are mounted near a depaneling line, the termination or component may be damaged by large stresses during depaneling. Mount the products as shown in the following figure to minimize depaneling stress.



The level of stress on terminations A>B≠C>D>E

- Use proper layouts to avoid stress from warping, bending, or deformation of the board in order to avoid solder cracking or component damage.



Large stress Small stress

- Pay careful attention to products mounted near the edge of the board or near connectors, since stresses may happen during connection.
- Pay careful attention to layout when products are mounted near large components, when solder solidifies, it creates a stress in directions based on the large components, and cracking may occur.
- Design solder pads to be equal. If solder pads differ in size, they may change electrical characteristics or cause cracking and tombstoning when solder is cooling.

Mounting and Soldering

- Poor mounting machine adjustment may cause cracking, chipping, or alignment errors. Check and inspect the mounting machine in advance.
- Set backup pins in an appropriate layout to avoid damage to components mounted on the back of the board. Do not set these pins at nozzle positions.
- Adjust the bottom dead point of a dispenser away from the board when you apply adhesive to avoid damage to components mounted on the back of the board.
- Confirm that products solder properly if wave soldering is used.
- Pay close attention to amount of solder, since an improper amount may create a large stress on the component and cause cracking or malfunctions.

Soldering with a Soldering Iron

- Solder using a soldering iron at the temperature specified in the technical specifications or precautions for each product.
- Perform preheating as much as possible.
- Keep the tip of the soldering iron away from the body and the product terminal.
- Avoid physical damage or shock to components when using hard tools like pliers and tweezers.

The following precautions apply to through-hole devices

Mechanical Stress

- Play close attention to vibration resonance after mounting.
- Do not add additional bending or twisting stresses to the product.
- Fix large components firmly.
- When lead wires are to be bent, use a large radius of curvature to avoid excessive stress on the terminal joint. Excessive stresses may cause the lead wire to separate from the electrode cap and damage the product.
- Do not add excessive stresses to the product body when lead wires are cut or held by the mounting machine.

Temperature Rise

- Pay close attention to heat radiation and interaction with other components, since large resistors general a large amount of heat when the rated power is applied.

Higher Power Ratings

In some cases, KOA will increase the power rating for a given component. Often, the older power rating and newer power rating are both given on the specification, in order to create a transition period. During this time, the new power rating will often have a note asking for discussion with KOA.

A higher power rating is based on appropriate resistance stability, but other ratings and parameters still require attention. For example, voltage rating is based on a separate failure mechanism and will not be increased in the same ratio. In mid- and high-value resistors, power dissipation will still be kept lower than the new rating by the voltage limit. In addition, using a resistor at a higher power than its previous rating will create a greater rise in temperature on the surface of the component. This temperature rise should be checked for acceptability and to make sure that the layout does not place the resistor near a board material or component that could be damaged by greater heat.

derating curves

Introduction of the Derating Curves Based on the Terminal Part Temperature

Background

Recent studies have led to better practices for miniaturizing high-power components in high-temperature automotive environments. Applications that require high-temperature resistors have increased dramatically. Recently, derating guidelines based on the resistor's terminal temperature, such as the diagram in figure 1, have been introduced to respond to these requirements.

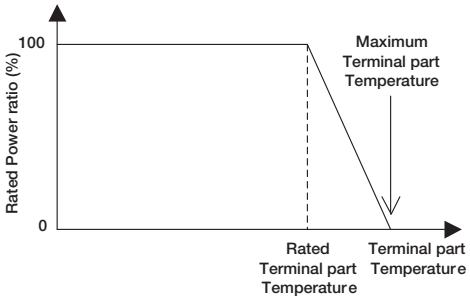

Figure 1. Derating curve based on the terminal part temperature

Derating by terminal temperature has already been used for metal-plate current-sense resistors with very low resistance values (such as the PSB and PSE series). These resistors are used to sense large currents in inverters and converters, and nearby switching elements or high-current conductors can lead to a local temperature increase at the resistor terminal beyond the temperature generated by the resistor itself. The techniques learned in designing these applications are now being extended to general-purpose components.

Overview of the Establishment of the Derating Curves Based on Ambient Temperature

The traditional derating curve, which is based on ambient temperature, was defined by IEC and JIS during the vacuum tube era, long before the appearance of surface-mount resistors. At the time, there were no printed circuit boards, and cylindrical resistors with lead wires were held above the board by lug terminals, as shown in figure 2.

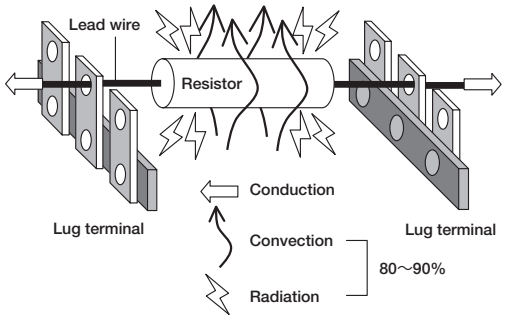

Figure 2. Heat dissipation of cylindrical resistors

Regardless of the shape of the resistor, the heat generated by its use is dissipated through three pathways. One path is conduction through solids such as the terminal. The second path is convection, usually heat transfer into the air by natural convection. The third path is radiation of infrared. Of these pathways, conduction increases with the area of solid connected the resistor. Convection and radiation increase with the total surface area of the resistor.

When cylindrical resistors with lead wires are mounted on lug terminals, the lead wire is long and thin, so the thermal resistance to conduction is high, and heat dissipation through that path is low. On the other hand, the dissipation of heat by convection and radiation is high, because the surface area of the resistor is large. Simulation shows that 80% to 90% of the heat from a cylindrical, lead-wire resistor is dissipated directly into the ambient air. The temperature of the resistor can be calculated by adding the temperature rise caused by self-heating to the ambient temperature. Because the ambient is sufficient to estimate the thermal resistance for most of the heat dissipation, the traditional derating curve was based on it.

Heat Dissipation of Surface Mount Resistors

Figure 3 shows the main heat dissipation paths for modern surface mount resistors. This type of resistor has only a small surface area, so convection and radiation have proportionally less heat dissipation. On the other hand, since the device is directly connected to the PCB pattern by a large part of the surface area, conduction will be the primary path for heat dissipation. In general, conduction through the terminal to the board represents over 90% of the heat dissipation, even when convection and radiation are presumed to be at their maximum levels. Therefore, the terminal temperature, on the main heat pathway, is the best location to monitor for controlling power dissipation.

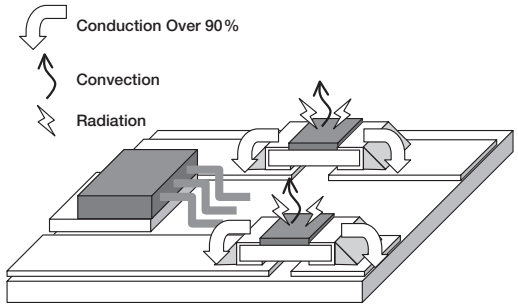

Figure 3. Heat dissipation of surface mount resistors

Derating Curve Suitable for the Surface Mount Resistor

As shown in figure 4, when a given amount of power is applied to the resistor, any given point on the resistor's surface will have the same temperature rise over the terminal temperature, regardless of ambient temperature. This is because there is very little heat dissipation from the resistor's surface to the ambient air.

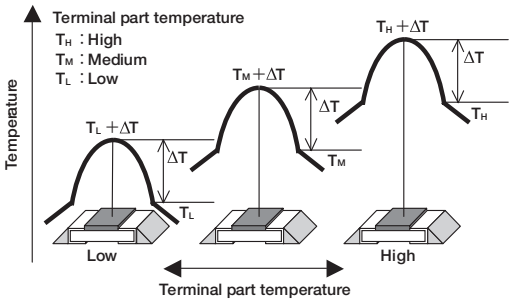

Figure 4. Contributing factor to the temperature of the surface mount resistor

However, surface temperatures at a given power will differ between different PCB designs, since the terminal temperature will be different. When resistors are mounted close to each other or other heat-generating devices, as shown in figure 5, there is a possibility that the temperature will be higher than the 70°C ambient temperature threshold used in the traditional JIS/IEC derating curve.

The traditional derating curve bsaed on ambient tempreature usually uses 70°C as the ambient temperature above which parts are to be derated. There will be no problem if resistors are used with sufficient electrical and thermal margin, but recent trends to miniaturization, high power density, and high-temperature use have reduced margins on design.

Redefining derating based on terminal temperature is a way to better represent the capabilities of the part. KOA will provide a derating curve suitable for surface mount resistors, based on testing under conditions where power rating is defined in terms of terminal temperature (as seen in terms & definitions).

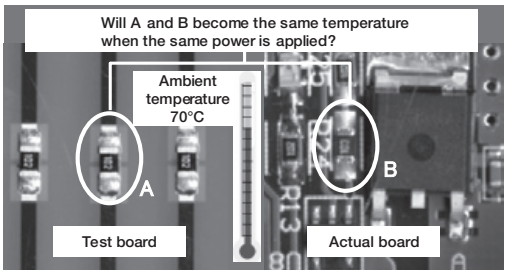

Figure 5. Temperature differs depending on the board

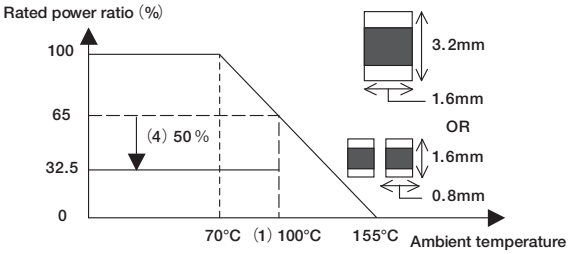
How to Use the Derating Curve Based on the Terminal Part Temperature

Here are some examples on using terminal temperature derating that lead to greater factors of safety, reduction in number of resistors, or use of a smaller component. The prior conditions will be the following (Be aware that the terminal part temperature does not always become 120°C when the ambient temperature is 100°C):

(1) Ambient temperature of the board: 100°C

(2) Terminal temperature of the surface mount resistor: 120°C

(3) Actual power load: 0.05W



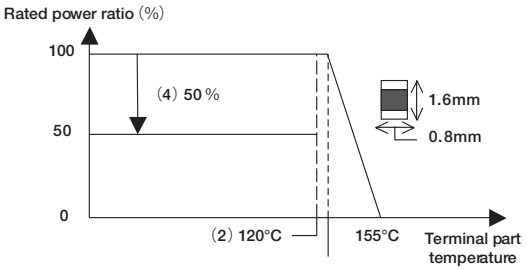
Necessary rated power= (3) 0.05/0.325=0.154W
1 piece of 2A (2012mm rated power 0.25W)
2 pieces of 1E size (1005mm rated power 0.1W)

Figure 6. Selection by the traditional derating curve

(4) Required margin of safety below rating according to designer's internal guidelines: 50%

The required power rating for the resistor using the ambient-temperature derating curve is calculated from conditions (1), (3), and (4). Figure 6 shows this result. For KOA's RK73B resistor series, one piece of 2A size, or two pieces of 1W size will be required.

However, when a resistor is selected using the terminal-temperature derating curve, which is better suited to surface-mount parts, conditions (2), (3), and (4) show that a single 1E (0402) size RK73B resistor would be sufficient.



100% until terminal part temperature is 125°C

Necessary rated power= (3) 0.05/0.5=0.1W
1 piece of 1E size (1005mm) rated power 0.1W

Figure 7. Selection using a terminal-temperature derating curve

As seen above, the number of resistors and the mounting area can be reasonably reduced by using the proper derating curve based on terminal temperature, and this will lead to cost savings.

Type	Power Rating	Rated Ambient Temp.	Rated Terminal Part Temp.
SG73S 2A	0.25W	70°C	125°C
SG73P 2A	0.5W	—	100°C

Table 1. Rating column of products with 2 rated power

Derating curve suitable for the surface mount resistor

As shown in Table 1, for the surface mount resistors, there are products that have 2 rated powers for the same type in the rating column. The high rated power is basically available and applicable only to boards with adequate heat dissipation design for example multilayer boards, DCB (direct copper bonding) boards and single layer boards with wide heat dissipation area land. Therefore, the horizontal axis of the derating curve for high rated power is only defined with the terminal part temperature and please be careful that the conventional derating curve defined by the ambient temperature cannot be used in this case. For these products, "-" will be shown in the rated ambient temperature column which means "Not Applicable."

In addition, we implement load life tests for the products with high rated power by using a test board that can specially control the terminal part temperature.

In the case of Table 1, there will be 3 derating curves as shown from Figure 8 to Figure 10.

How to use each derating curve is shown as the following.

When 0.25W is the rated power

When the terminal part temperature can be measured:

The derating curve in Figure 8 can be applicable and it can be used with rated power 0.25W up to terminal part temperature 125°C. The derating curve with the horizontal axis based on the terminal part temperature supersedes the conventional derating curve with the horizontal axis based on the ambient temperature. Therefore, even when the ambient temperature exceeds 100°C, it can be used with rated power 0.25W as long as the terminal part temperature is below 125°C.

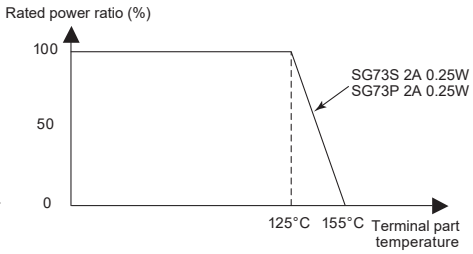


Figure 8. Derating curve of 0.25W rated power based on terminal part temperature

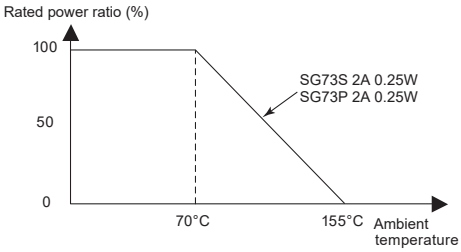

Figure 9. Derating curve of 0.25W rated power based on ambient temperature

When the terminal part temperature is not measured and only the ambient temperature is measured:

The product may be used by derating the load power from the ambient temperature 70°C according to the conventional derating curve shown in Figure 9. However, as mentioned in the past descriptions, the temperature of the resistor differs according to the wiring patterns and heat generating components nearby, even when the ambient temperature is the same, so it is not a derating method with good precision.

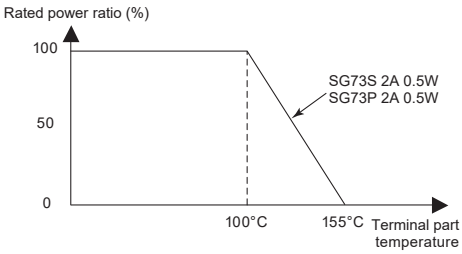

Figure 10. Derating curve of 0.5W rated power based on terminal part temperature

When 0.5W is the rated power

Managing the terminal part temperature is the requirement to apply the rated power 0.5W. Only the derating curve with the horizontal axis based on the terminal part temperature as shown in Fig.10 can be used but it can assure up to the high power. The product can be used with 0.5W if the terminal part temperature is below 100°C.

Caution & Terms

resistors

Precautions for the Resistors

Refer to the precautions of common matters for all products in the beginning of this catalog.

General in Fixed Resistors

- For basic precautions of using resistors, refer to the technical report "JEITA RCR-2121B Safety application guide for fixed resistors for use in electronic equipment" issued by JEITA.
- When the resistors are operated in ambient temperature above the rated temperature, the power rating must be derated according to the derating curve.
- Resistors in general may emit flame, fire or smoke when overload is applied.
- Flame retardant resistors may emit smoke or appear red hot when overload is applied but are unlikely to emit flame or fire.
- When the resistors are sealed and coated by coating materials such as resin, deterioration of the resistor by thermal stress or resin may affect the characteristics. Confirm with KOA for the performance and reliability specifications in advance.

  When the resin absorbs moisture, the resistance to moisture and corrosion of the resistor may deteriorate, so be aware.
- When the resistor is coated, potted or molded by resin materials, the curing stress could cause peeling of protective coating and cracking of solder fillet, resulting in resistance change and disconnection. Do not coat nor seal the flame retardant coated resistors.
- Allow enough time for cooling after mounting metal film resistors, before washing off the flux. Residues of ionic substances may deteriorate resistances to moisture and corrosion.
- KOA can only guarantee safety when the average power is below the rated power, When power, exceeding the rated power, is applied for a short duration, please contact us with the surge voltage or current waveform for advice.
- Cylindrical film resistors have inductance due to the spiral trimming.

  Please be aware when using in a high-frequency circuit.
- The flame retardant resistors are weak against mechanical stress compared with the general resistors due to the special coating. Please do not apply impact, vibration or pinching with pliers, tweezers to the resistor body. Do not apply any external force to the protective coating until drying is fully completed after washing.

Chip Resistor Array and Networks

- Misalignment of the mounting, abnormal solder amount or a loading direction mistake in the flow soldering process could cause a solder bridge to the neighboring terminations.
- Adhesive of ionic residuals on the resistor or board could cause migration between the neighboring terminations.

Wirewound Type Resistors

- Wirewound type resistors have inductances and parasitic capacitances resulting from the winding structure. Therefore, they could resonate when used in a high frequency circuit.

Fusing Resistors

- Confirm beforehand that the overload condition of the abnormal situations are within the fusing characteristics.
- Contact KOA in advance when excess overload above the rated voltage is continuously applied, since there is a possibility of damage accumulated in the resistor.
- The arc phenomenon may occur when high voltage is applied again after fusing by over current. Make sure to use the product below the maximum open circuit voltage.
- Contact KOA about the maximum open circuit voltage, it varies depending on the product type and resistance.
- The fusing characteristics could change when the resistors are coated, potted and molded by resin materials.

Terms and Definitions

Nominal Resistance

- Designed resistance value usually indicated on the resistor.

Power Rating

- Maximum allowable power at rated temperature. Some of our chip resistor arrays and networks specify the power rating for the entire package, as opposed to each element.

Rated Temperature

- Maximum ambient temperature at which the power rating may be applied continuously. The rated ambient temperature refers to the temperature around the resistor mounted inside the equipment, not to the air temperature outside the equipment.

Derating Curve

- Plot that expresses the relation between ambient temperature and the maximum allowable power, which is generally expressed in percentage.

Rated Voltage

- Maximum allowable D.C. or A.C. voltage, to be continuously applied to a resistor or a resistor element.

  Rated Voltage (V) = $\sqrt{\text{Rated Power (W) X Nominal Resistance Value (}\Omega\text{)}}$

  Rated voltage shall be the calculated value or max. working voltage, whichever is lower.

Critical Resistance

- The maximum nominal resistance value at which the rated power can be applied without exceeding the maximum working voltage. The rated voltage is equal to the max. working voltage at the critical resistance value.

Max. Working Voltage

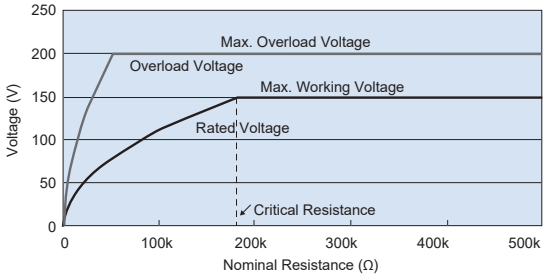
- Maximum D.C. or A.C. voltage that can be continuously applied to the terminations of a resistor. However, the maximum value of the applicable voltage is the rated voltage at the critical resistance value or lower.

Overload Voltage

- Allowable voltage which is applied for 5 sec. according to the short time overload test. Overload voltage shall be 2.5 times of rated voltage or max. overload voltage, whichever is lower.

Maximum Overload Voltage

- Largest value of overload voltage



Example of Various Voltage of RK73G 2A

Dielectric Withstanding Voltage

- A.C. voltage (rms) that can be applied to a designated spot between the electrode and the outer coating for one minute according to the proof test.

Temperature Coefficient of Resistance (T.C.R.)

- Relative variation of resistance between two given temperatures when temperature is changed by 1K, which is calculated by the following formula.

$$\text{T.C.R. } (\times 10^{-6}/\text{K}) = \frac{R-R_0}{R_0} \times \frac{1 \times 10^6}{T-T_0}$$

R : Resistance value (Ω) at T

R_0 : Resistance value (Ω) at T_0

T : Measured test temperature (°C)

T_0 : Measured base temperature (°C)

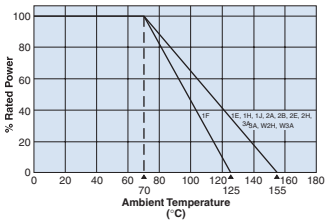
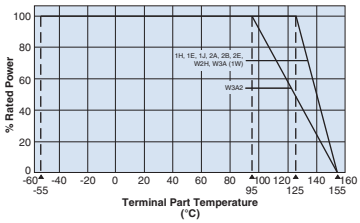
Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the above derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower

If any questions arise on whether to use the "Rated Ambient Temperaute" or the "Rated Terminal Part Temperature" in your usage conditions, please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details, refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of our catalog. Temperature rise at high power will depend on PCB layout. Be sure to contact factory prior to use and monitor terminal part temperature.

Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower

* 1F: E-24. 1H: 1.0~9.1, 1M~10MΩ: E-24. If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of the catalog. While using under high power, the temperature of the product may increase depending on the condition of heat dissipation from PCB. Be sure to check the terminal part temperature as well as precautions to use on delivery specification before use.

environmental applications

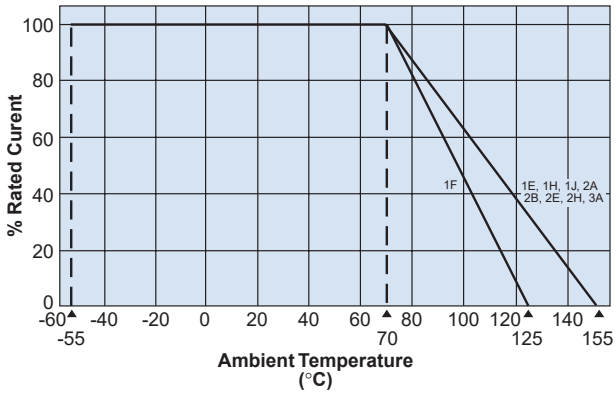
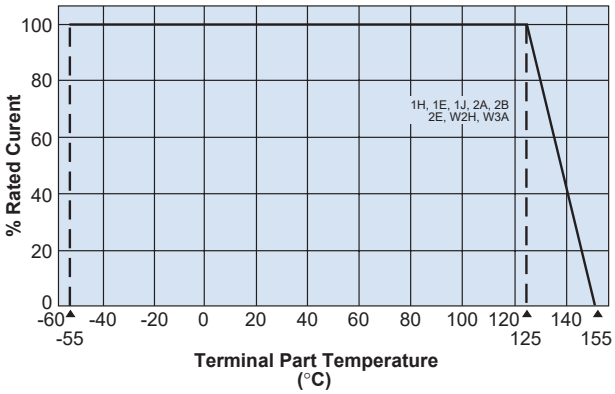
Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a current rating shall be derated in accordance with the above derating curve.



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to “Introduction of the derating curve based on the terminal part temperature” in the beginning of our catalog before use.

Performance Characteristics

KOA SPEER ELECTRONICS, INC.

RN73H

metal film chip resistor (for automotive, high reliability)

EU RoHS COMPLIANT

features

- High precision type ±0.05% is available with standard products
- Improved moisture resistance by glass passivation layer
- High reliability and high stability at elevated temperatures
- Low current noise
- Products with lead-free terminations meet EU RoHS requirements
- Rated ambient temperature: 85°C, rated up to +155°C
- AEC-Q200 Qualified: 0402 (1E), 0603 (1J), 0805 (2A), 1206 (2B), 1210 (2E)

dimensions and construction

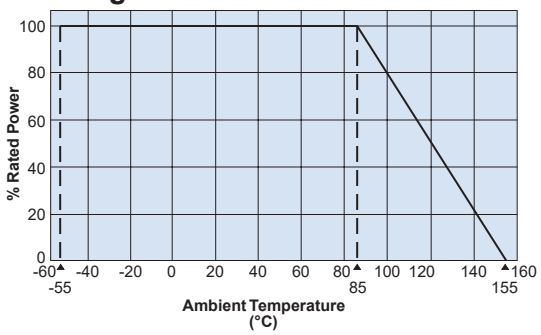
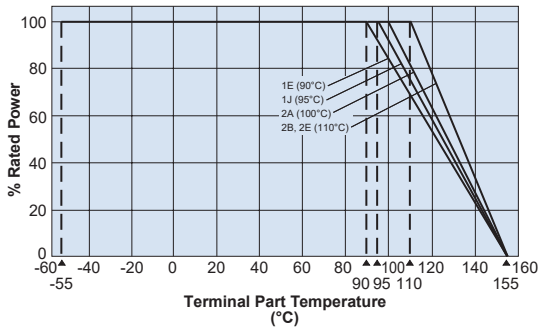
Derating Curve



For resistors operated at an ambient temperature of 85°C or above, a power rating shall be derated in accordance with the above derating curve.



For resistors operated terminal part temperature of described for each size or above, a power rating shall be derated in accordance with derating curve. Please refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of our catalog before use.

* Depends on resistance value, please contact KOA Speer for details.

Precautions for Use

- The properly and electrostatically measured taping materials are used for the components, but attention should be paid to the fact that there is some danger the parts absorb on the top tapes to cause a failure in the mounting and the parts are destructed by static electricity (1J, 2A, 2B, 2E: 1kV and more, 1E: 0.5kV and more at Human Body Model 100pF, 1.5kΩ) to change the resistance in the conditions of an excessive dryness or after the parts are given vibration for a long time as they are packaged on the tapes. Similarly, care should be given not to apply the excessive static electricity when mounting on the boards.
- Ionic impurities such as flux etc. that are attached to these products or those mounted onto a PCB, negatively affect their moisture resistance, corrosion resistance, etc. The flux may contain ionic substances like chlorine, acid, etc. while perspiration and saliva include ionic impurities like sodium (Na +), chlorine (Cl−) etc. Therefore these kinds of ionic substances may induce electrical corrosion when they invade into the products. Either thorough washing or using RMA solder and flux are necessary since lead free solder contains ionic substances. Washing process is needed, before putting on moisture proof material in order to prevent electrical corrosion.
- The upper electrodes could be peeled off when a heat-resistant masking tape is attached to the mounted chip resistors and then detached from them. It is confirmed that the adhesiveness gets stronger due to the exposure to heat under mounting. Accordingly, we recommend the use of masking tape be refrained. If the use of heat-resistant masking tape is unavoidable, please make sure that the adhesives on the tape do not directly come in contact with the product.
- When high-pressure shower cleaning is implemented, there is a possibility of exfoliation of the top electrodes caused by the water pressure stress so please avoid the implementation.
- If the implementation is unavoidable, then please evaluate the products beforehand.

For Surface Temperature Rise Graph see Environmental Applications. Additional environmental applications can also be found at www.koaspeer.com

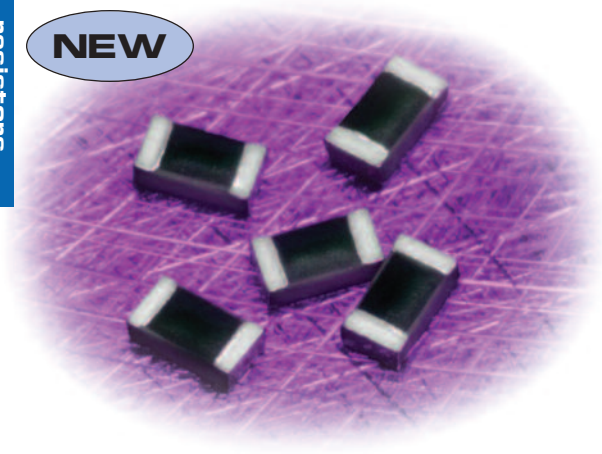
KOA SPEER ELECTRONICS, INC.

RN73R

metal film flat chip resistors (high reliability)



EU RoHS COMPLIANT

features

- SMD metal film resistors
- High precision type ±0.05% is also available as standard
- High performance T.C.R. ±5×10^{-6}/K is also available as standard
- Low current noise
- Improved moisture resistance by high humidity protective coating
- Suitable for control circuits in various industrial equipment
- Suitable for both flow and reflow solderings
- Products meet EU-RoHS requirements

	±0.5%	±0.25%	+155°C, 1000 hours

Precautions for Use

- The properly and electrostatically measured taping materials are used for the components, but attention should be paid to the fact that there is some danger the parts absorb on the top tapes to cause a failure in the mounting and the parts are destructed by static electricity (1kV and more: 1J, 2A, 2B, 2E 0.5kV and more: 1E, Human Body Model 100pF 1.5kΩ) to change the resistance in the conditions of an excessive dryness or after the parts are given vibration for a long time as they are packaged on the tapes. Similarly, care should be given not to apply the excessive static electricity when mounting on the boards.
- Ionic impurities such as flux etc. that are attached to these products or those mounted onto a PCB, negatively affect their moisture resistance, corrosion resistance, etc. The flux may contain ionic substances like chlorine, acid, etc. while perspiration and saliva include ionic impurities like sodium (Na^+), chlorine (Cl^-) etc. Therefore these kinds of ionic substances may induce electrical corrosion when they invade into the products. Either thorough washing or using RMA solder and flux are necessary since lead free solder contains ionic substances. Washing process is needed, before putting on moisture proof material in order to prevent electrical corrosion.
- The upper electrodes could be peeled off when a heat-resistant masking tape is attached to the mounted chip resistors and then detached from them. It is confirmed that the adhesiveness gets stronger due to the exposure to heat under mounting. Accordingly, we recommend the use of masking tape be refrained. If the use of heat-resistant masking tape is unavoidable, please make sure that the adhesives on the tape do not directly come in contact with the product.
- When high-pressure shower cleaning is implemented, there is a possibility of exfoliation of the top electrodes caused by the water pressure stress so please avoid the implementation.
- If the implementation is unavoidable, then please evaluate the products beforehand.

HRK73

high temperature flat chip resistors

NEW

EU RoHS COMPLIANT

features

- Maximum operating temperature is 200°C. Suitable for conductive glue mounting.
- Excellent heat resistance and weather reistance are ensured by the use of metal glaze thick film
- High stability and high reliability with the triple-layer structure of electrode
- Applicable to various kinds of automatic mounters for taping, etc
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

Derating Curve

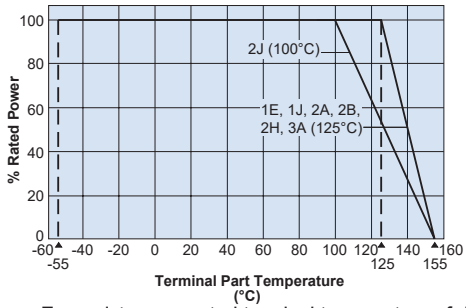
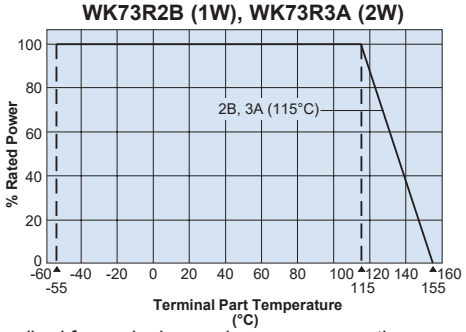
For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

WK73R2B (1W), WK73R3A (2W)





For resistors operated terminal temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve above.
Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.
If you want to use at rated power (*1), use derating curves based on the terminal part temperature on the right side graph.

High Temperature Exposure	±1%	±0.2%	+155°C, 1000 hours

features

- Superior to RK73B/RK73H series in surge/pulse withstanding voltage
- Untrimmed, superior surge/pulse and ESD withstanding
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified: 0603(1J), 0805(2A), 1206(2B), 1210(2E), 2010(2H/W2H), 2512(3A/W3A)

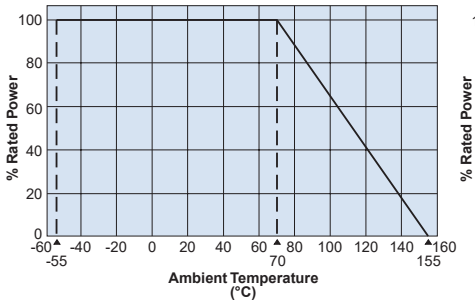
If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

environmental applications

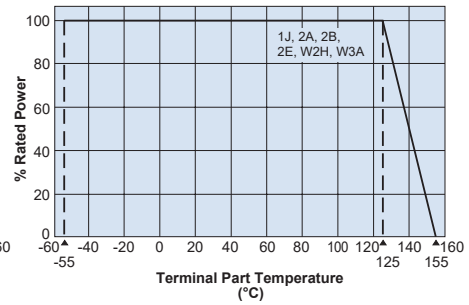
Derating Curve

SG73



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

SG73

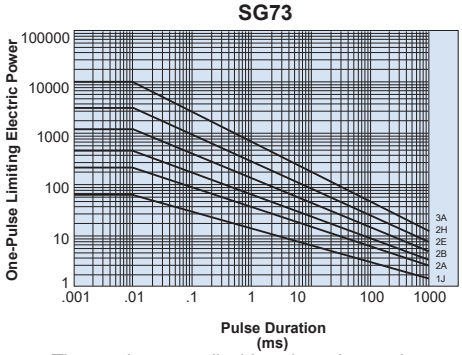


For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

One-Pulse Limiting Electric Power

SG73



The maximum applicable voltage is equal to the max. overload voltage. Please contact factory for resistance characteristics of continuous applied pulse.

Performance Characteristics

environmental applications

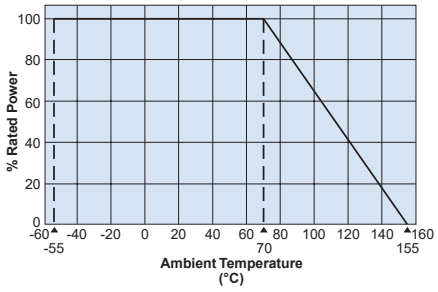
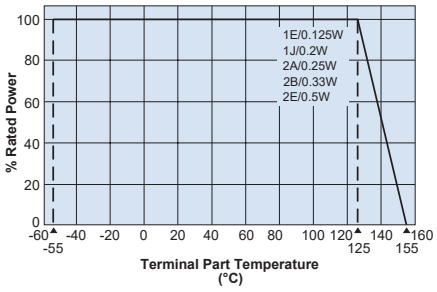
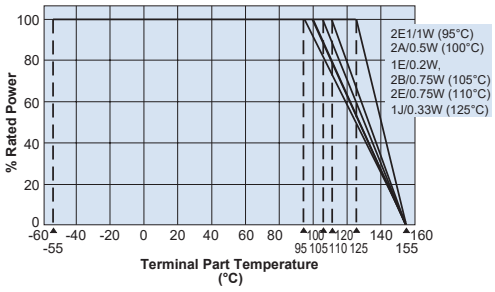
Derating Curve







For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

If you want to use the rated power of *2,*3 please use the derating curve based on the terminal part temperature on the right hand side.

Additional environmental applications can also be found at www.koaspeer.com

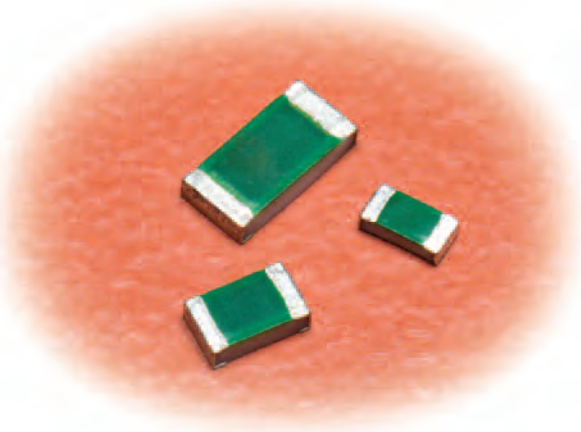
KOA SPEER ELECTRONICS, INC.

SG73G

endured pulse power flat chip resistors (ultra precision grade)

EU RoHS COMPLIANT



features

- Superior to RK73 series chip resistors in pulse withstanding voltage and high power
- High precision resistor with T.C.R. ±50x10^{-6}/K and tolerance ±0.25%, ±0.5%
- Suitable for both reflow and flow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower

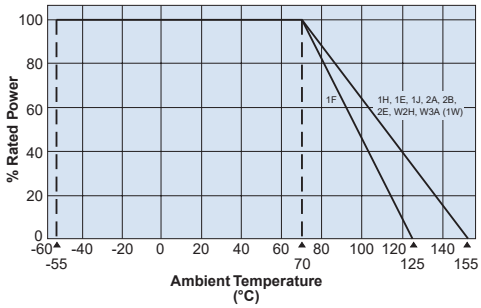
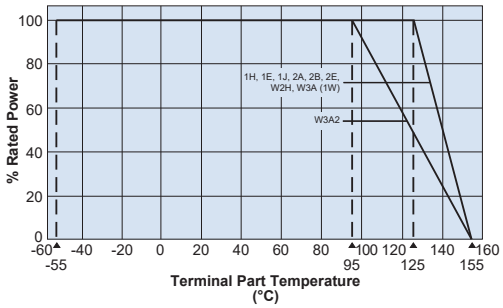
*The nominal resistance value for RK73H1F (F:±1%) is E24

If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves in the terminal part temperature" in the beginning of the catalog.
While using under high power, the temperature of the product may increase depending on the condition of heat dissipation from PCB.
Be sure to check the terminal part temperature as well as precautions to use on delivery specification before use.

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the above derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

KOA SPEER ELECTRONICS, INC.

RK73G-RT

flat chip resistor
(ultra precision grade, anti-sulfuration)

EU RoHS COMPLIANT

features

- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material
- Metal-glaze thick film resistor for surface mounting
- High precision resistor with T.C.R. ±50x10^{-6}/K and tolerace ±0.25%
- Suitable for both flow and reflow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

KOA SPEER ELECTRONICS, INC.

WK73-RT

higher power, wide terminal type flat chip resistors (anti sulfuration)

EU RoHS COMPLIANT

features

- Anti-sulfuration type, wide-side termination (reverse-geometry) type flat chip resistor
- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material
- Suitable for both flow and reflow solderings
- This products meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

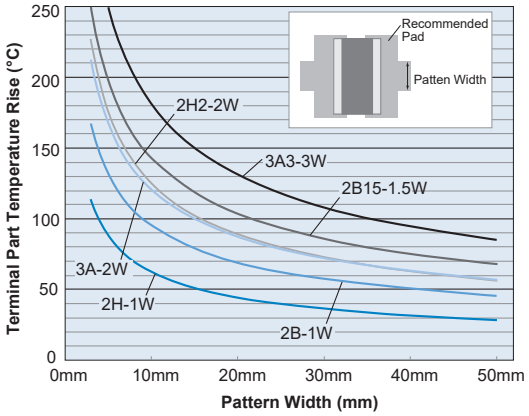
environmental applications

Device Temperature Data



Room Temperature 25°C
PCB: FR-4 t=1.6mm Cu foil thickness=35μm
While using under high power, the temperature of the product may increase depending on the condition of heat dissipation from PCB.
Be sure to check the terminal part temperature as well as precautions for use on delivery specifications before use.

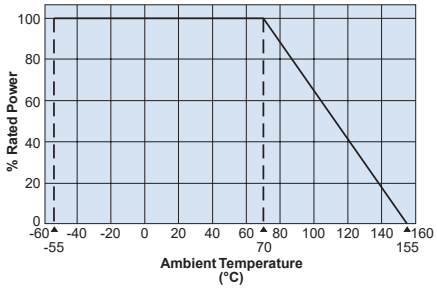
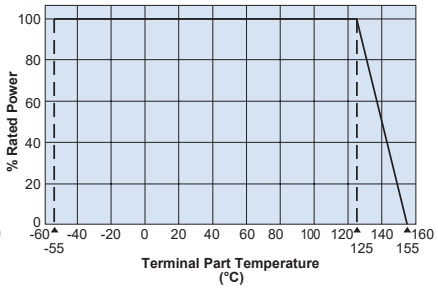
If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

environmental applications

Derating Curve



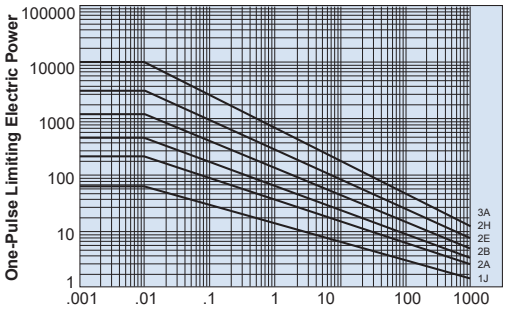
For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

One-Pulse Limiting Electric Power



The maximum applicable voltage is equal to the max. overload voltage. Please contact factory for resistance characteristics of continuous applied pulse.

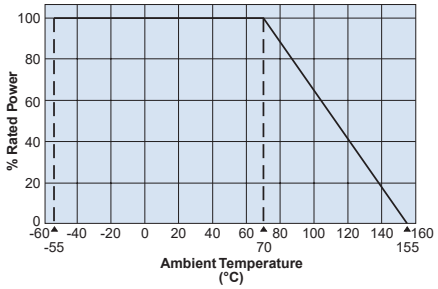
*1 Cold T.C.R. (-55°C ~ +25°C) is ±150x10^{-6}/K *2 If you want to use the rated power of *2, *3 please reference below. *3 Applies when power rating is 0.4W or lower.

Rated voltage = $\sqrt{\text{Power rating x resistance value}}$ or max. working voltage, whichever is lower

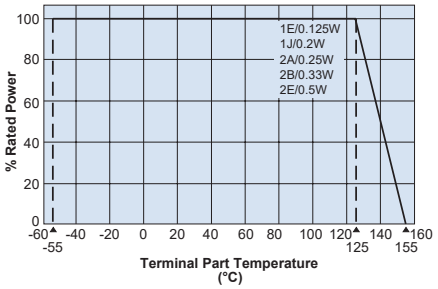
If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog. Also, contact KOA prior to usage and for the max. working voltage and max. overload voltage.

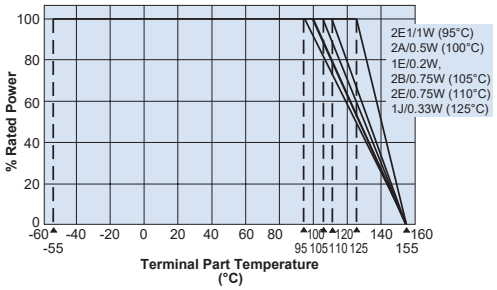
environmental applications

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.





For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

*2, *3 If you want to use the rated power of *2, *3, please use the derating curve based on the terminal part temperature on the right hand side.

Additional environmental applications can also be found at www.koaspeer.com

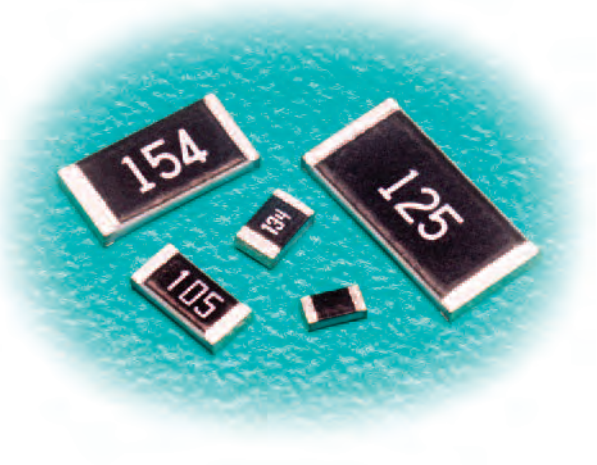
HV73-RT

flat chip resistors for high voltage (anti-sulfuration)

EU RoHS COMPLIANT



features

- Superior to RK73 series in maximum working voltage
- Suitable for flow and reflow solderings
- Products meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- Excellent anti-sulfuration characteristics due to using high sulfuration-proof inner top electrode material

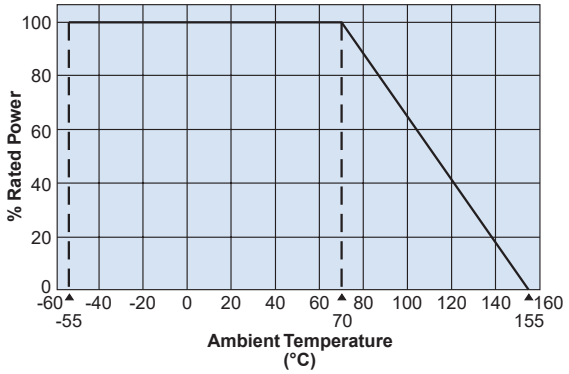
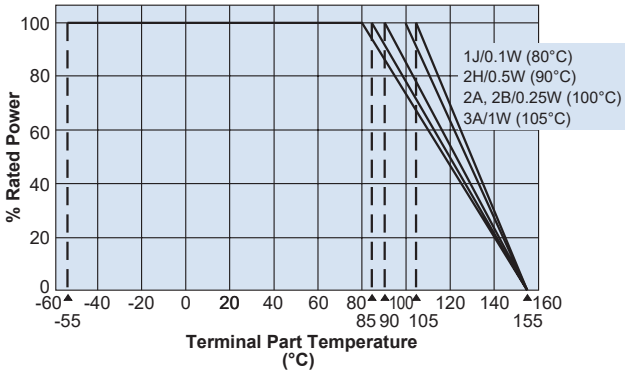
If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

environmental applications

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the above derating curve.
Please refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of our catalog before use.

KOA SPEER ELECTRONICS, INC.

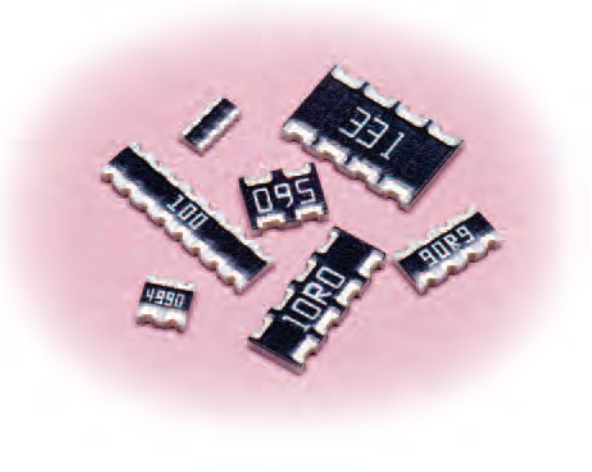
CN-RT

anti sulfuration chip networks (concave termination)

EU RoHS COMPLIANT



features

- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material
- More advancement in the mounting density than individual chip resistors
- Mounting cost reduction by decreasing the number of parts mounting times
- Higher self-alignment effect in reflow-soldering process
- Suitable for an image recognition mounter due to square corner design
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.

KOA SPEER ELECTRONICS, INC.

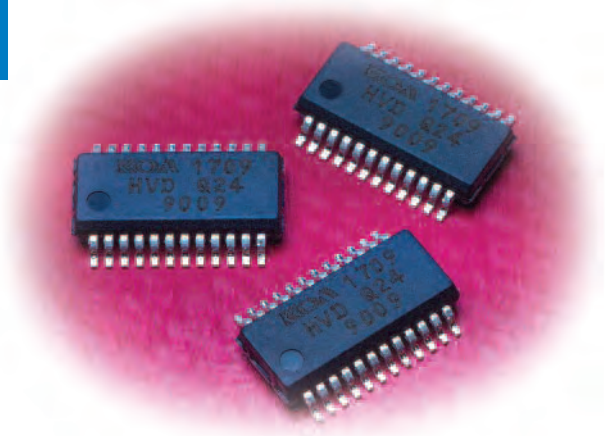
HVD

thin film network resistors for high voltage divider

EU RoHS COMPLIANT



features

- High precision high voltage divider
- Maximum resistance value 11.5MΩ, maximum working voltage 1000V, maximum resistance ratio 1:1000
- Relative precision of pair resistors are guaranteed
- Higher integration saves board space and overall assembly costs
- Excellent reliability with standard molded IC package
- Suitable for reflow soldering
- Products meet EU RoHS requirements
- AEC-Q200 qualified

CN__A

convex termination with scalloped corners resistor array

EU RoHS COMPLIANT

features

- Manufactured to type RK73 standards
- Less board space than individual chips
- Isolated resistor elements
- Convex terminations with scalloped corners
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified: CN1J4A only

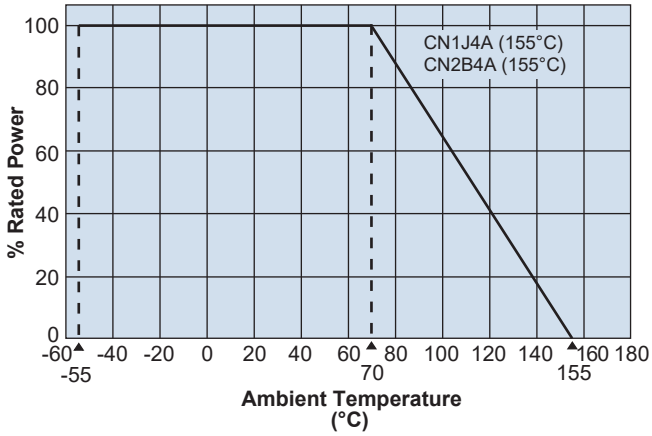
CN2B4A	1/8W (.125W)			—		—	10Ω - 1MΩ	200V	400V	

* Note that network resistors generate higher heat rather than single flat chip resistors even under rated power output

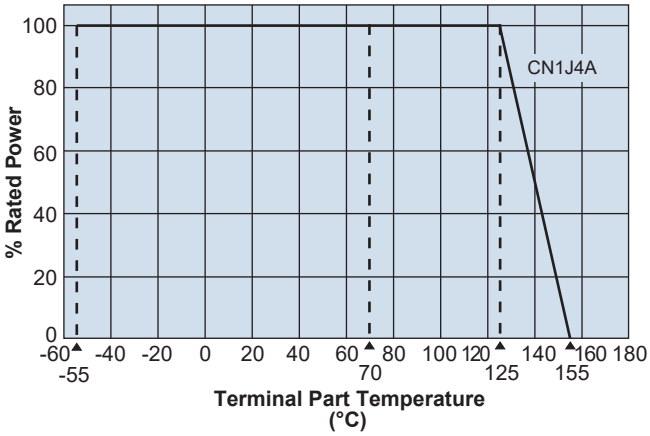
If any questions should arise whether to use the “Rated Ambient Temperature” or the “Rated Terminal Part Temperature,” please give priority to the “Rated Terminal Part Temperature.” Prior to use and for more details refer to “Introduction of the derating curves on the terminal part temperature” in the beginning of the catalog.

environmental applications

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to “Introduction of the derating curve based on the terminal part temperature” in the beginning of our catalog before use.

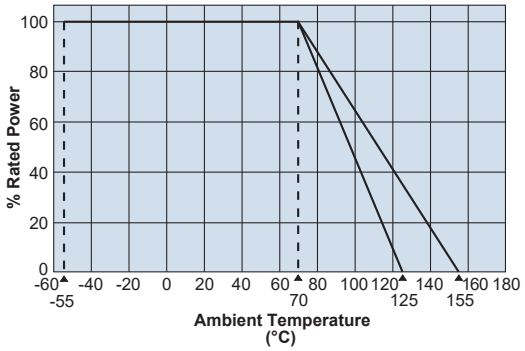
environmental applications

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

KOA SPEER ELECTRONICS, INC.

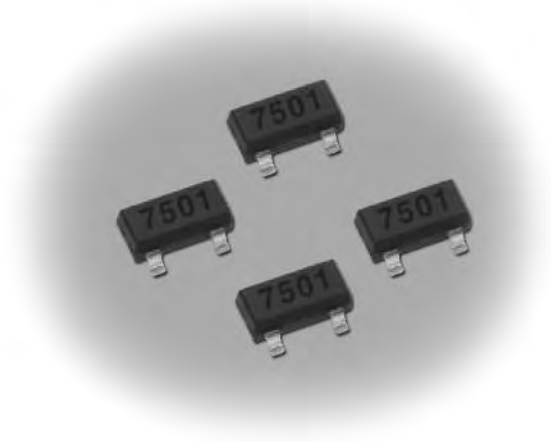
RTY

precision voltage divider

EU RoHS COMPLIANT



features

- Expanded flexibility of component layout
- Relative precision of pair resistors are guaranteed
- Relative resistance tolerance 0.05% ~
- TCR tracking 5x10^{-6}K~

ordering information

ratings

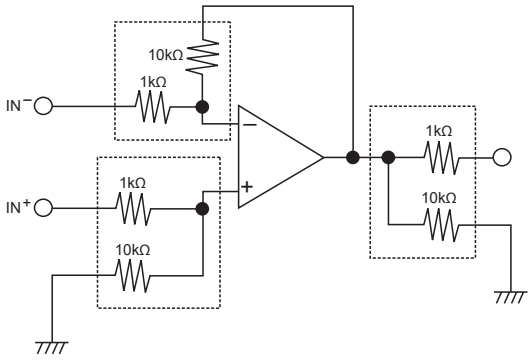
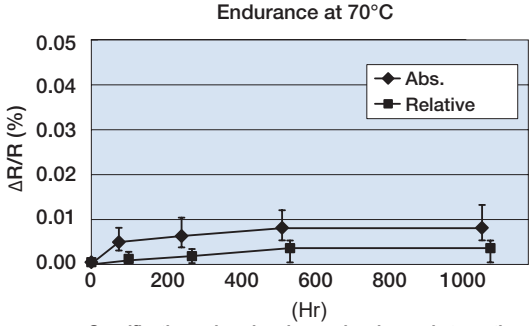
Package Symbol	Package	Number of Pins	Package Power Rating (W)
S03	SOT-23	3	0.2

example of application



typical characteristics

Endurance at 70°C (Typical: 1kΩ, 8 resistors/package)



merit of thin film resistor networks

Metal thin film resistors formed by sputtering method have very similar characteristic among pair resistors. When their characteristic of T.C.R., aging, etc. for relative precision is requested, it's very suitable to apply thin film resistor networks to utilize the characteristic as above.

11/15/17

EU RoHS COMPLIANT

features

- Thin film construction
- Surface mount package
- Stable resistor technology
- High component density
- Products with lead-free terminations meet EU RoHS and China RoHS requirements

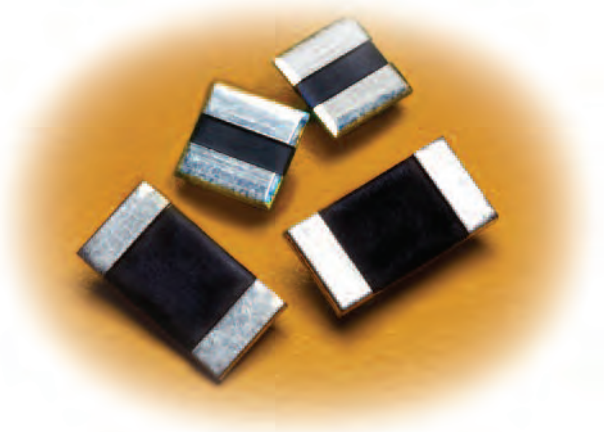
PSI, PSE

chip type power shunt resistor

EU RoHS COMPLIANT



features

- Smooth current flow, suitable for large current detecting
- Flat structure, applicable for strong mounting
- Automatic mounting machines are applicable
- Products with lead-free terminations meet EU RoHS and China RoHS requirements
- AEC-Q200 Qualified

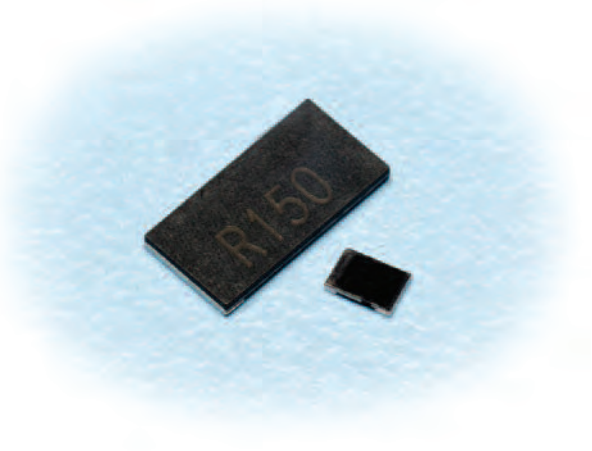
TLR1E, 2A

metal plate chip type low resistance resistor

EU RoHS COMPLIANT



features

- SMD type of small size, metal plate low resistance resistor for current detection
- Low height suitable for use of small equipment such as mobile phone
- High reliability and performance with T.C.R ±100×10^{-6}/K
- Suitable for reflow soldering (Not suitable for flow soldering)
- Products meet EU RoHS requirements
- AEC-Q200 Qualified 0805 (2A)

TLR-2B, 2H, 3A, 3AW

metal plate current sense resistor

EU RoHS COMPLIANT

current sense

features

- Ultra-low TCR (+50ppm/°C) available
- Metal alloy: superior corrosion and heat resistance
- Applications include current sensing, voltage division and pulse applications
- Ultra low resistance (0.5mΩ - 20mΩ)
- Suitable for reflow soldering (Not suitable for flow soldering)
- Products with lead-free terminations meet EU RoHS and China RoHS requirements
- AEC-Q200 Qualified

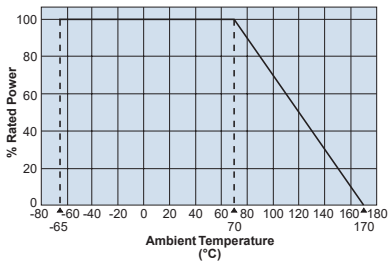
** Please reference High Temperature Performance Characteristics in the below table

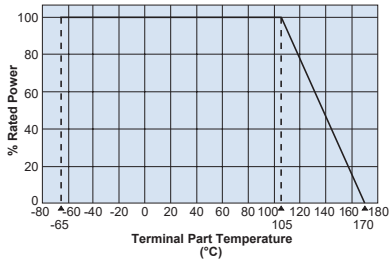
If any questions should arise whether to use the “Rated Ambient Temperature” or the “Rated Terminal Part Temperature,” please give priority to the “Rated Terminal Part Temperature.” Prior to use and for more details refer to “Introduction of the derating curves on the terminal part temperature” in the beginning of the catalog.

environmental applications

Derating Curve



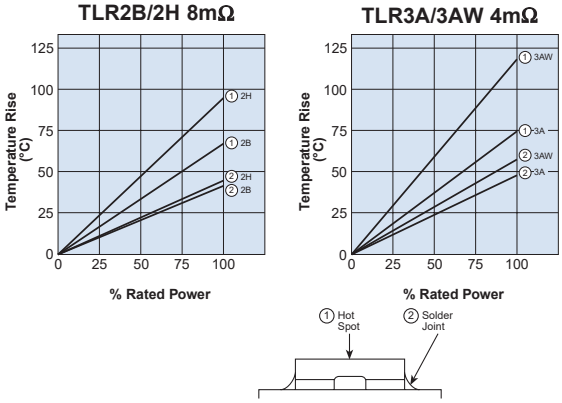
For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to “Introduction of the derating curve based on the terminal part temperature” in the beginning of our catalog before use.

Temperature Rise



Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Performance Characteristics

EU RoHS COMPLIANT

features

- SMD type of small size, metal plate low resistance resistor for current detection
- Low height suitable for use of small equipment such as mobile phone
- High reliability and performance with T.C.R ±100×10^{-6}/K
- Suitable for reflow soldering (Not suitable for flow soldering)
- Products meet EU RoHS requirements
- AEC-Q200 Qualified

Low Temperature Exposure			-55°C, 1000 hours
High Temperature Exposure			155°C, 1000 hours

Note: Please contact factory for the TLRZ Performance Characteristics

features

- SMD Type of small size, low resistance resistor for current detection
- Carrier metal plate inside, resistor of high radiation of heat structure (3AW, 3AP)
- High reliability and performance with low T.C.R.
- Automatic mounting machines are applicable
- Suitable for reflow soldering (Not suitable for flow soldering)
- Products with lead-free terminations meet EU RoHS requirements
- AEC-Q200 Qualified

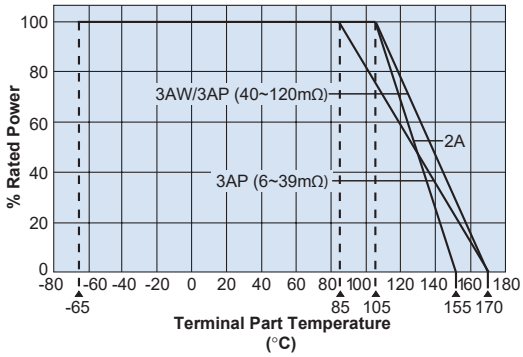
environmental applications

Derating Curve



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

Temperature Rise

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Performance Characteristics

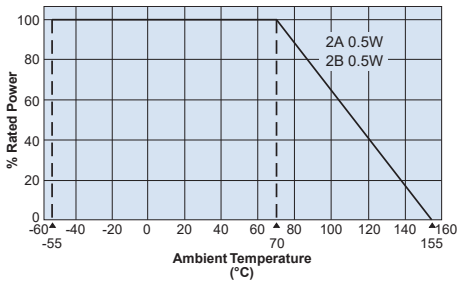
* Rated voltage = $\sqrt{\text{Power Rating X Resistance Value}}$

** Please keep the resistor operating according to the derating curve of the terminal part temperature based on the specified power rating.

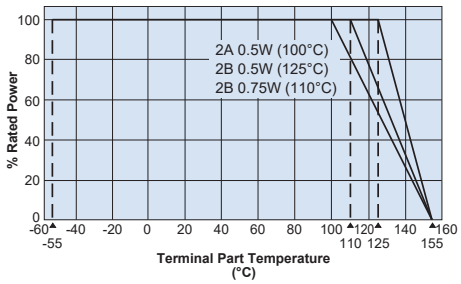
If any questions should arise whether to use the “Rated Ambient Temperature” or the “Rated Terminal Part Temperature,” please give priority to the “Rated Terminal Part Temperature.” Prior to use and for more details refer to “Introduction of the derating curves on the terminal part temperature” in the beginning of the catalog.

environmental applications

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, the power rating shall be derated in accordance with the above derating curve.



For resistors operated at a terminal part temperature of described for each size or above, the power rating shall be derated in accordance with the above derating curve.
Please refer to “Introduction of the derating curve based on the terminal part temperature” in the beginning of our catalog prior use.

Performance Characteristics

features

- Very low resistance, high precision reliability
- Utilization of thick film
- Low T.C.R. achieved (±100 ppm/°C)
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.

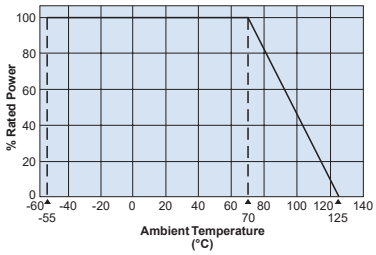
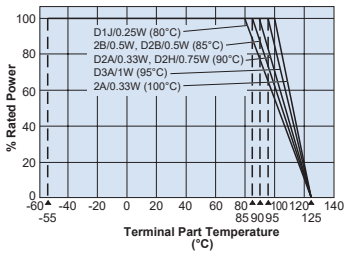
If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

environmental applications

Derating Curve



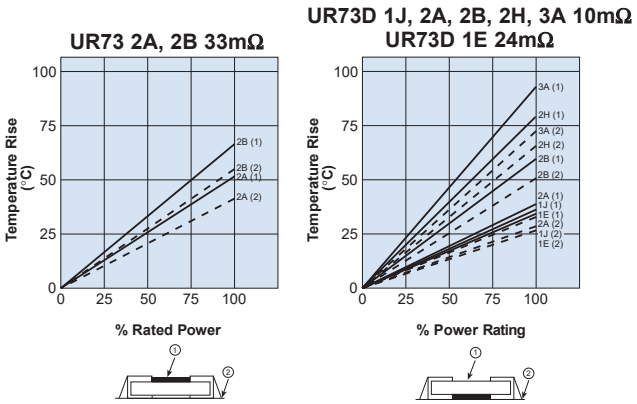
For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog prior use.

Surface Temperature Rise



Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

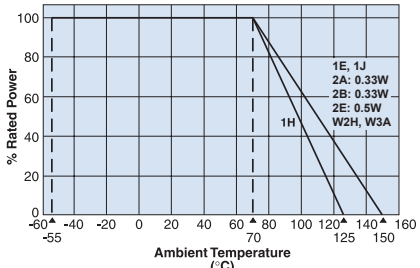
If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

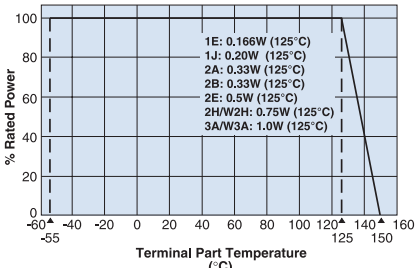
[1] Prior to use, refer to the "Higher Power Ratings" in the beginning of catalog. Rated voltage = √Power rating x resistance value or max. working voltage, whichever is lower

environmental applications

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" on the beginning of our catalog before use.

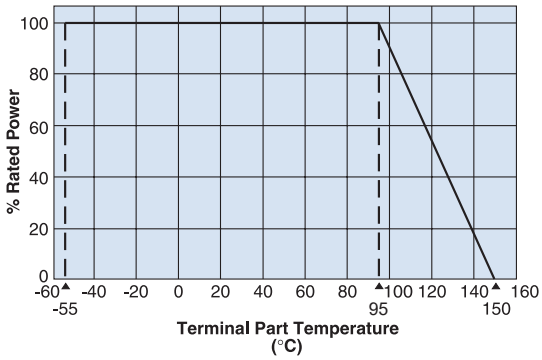
Prior to use and for more details refer to “Introduction of the derating curves on the terminal part temperature” in the beginning of the catalog.

environmental applications

Derating Curve



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve. Please refer to “Introduction of the derating curve based on the terminal part temperature” in the beginning of our catalog before use.

Performance Characteristics

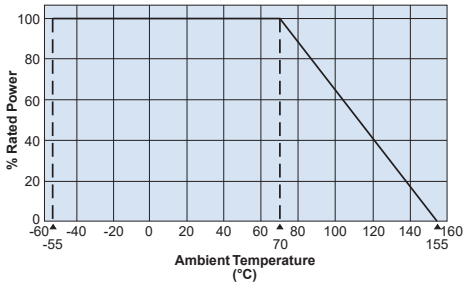
*1 A power rating is guaranteed at the terminal part temperature
If any questions should arise whether to use the “Rated Ambient Temperature” or the “Rated Terminal Part Temperature,” please give priority to the “Rated Terminal Part Temperature.” Prior to use and for more details refer to “Introduction of the derating curves on the terminal part temperature” in the beginning of the catalog.

*2 A power rating shall be guaranteed with a method shown in the Performance Characteristics. Please contact factory prior to use.

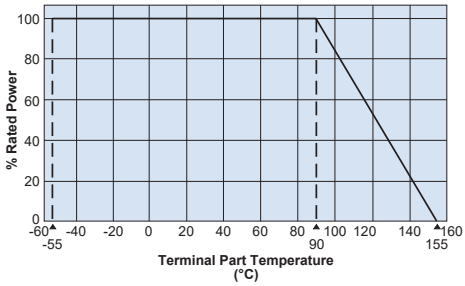
*3 Please contact factory for T.C.R. of RD41
Operating Temperature Range: -55°C to +155°C

environmental applications

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.



For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to “Introduction of the derating curve based on the terminal part temperature” in the beginning of our catalog before use.

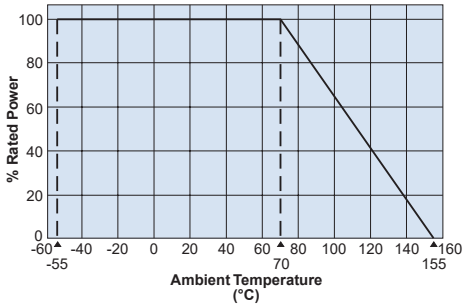
Operating temperature: -55°C ~ +155°C

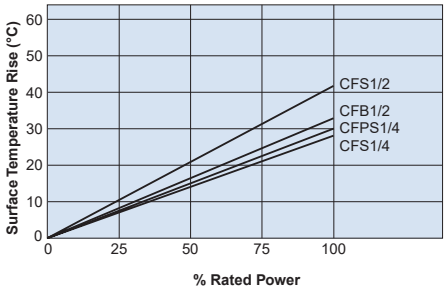
environmental applications

Derating Curve

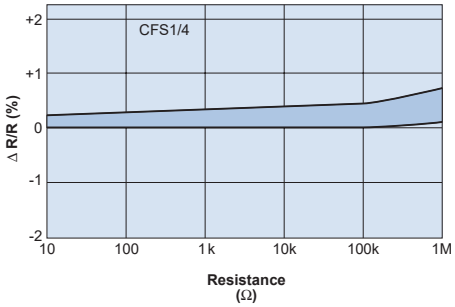


For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Surface Temperature Rise



Load Life @ 70°C, 1000 Hr



Performance Characteristics

Parameter	Requirement ΔR ±(% + 0.05Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	Measuring points are at 10mm ±1mm from the end cap.
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C
Overload (Short time)	±1%	±0.5%	Rated voltage x 2.5 or max. overload voltage for 5 seconds, whichever is lower
Resistance to Solder Heat	±1%	±0.5%	260°C ±5°C, 10 seconds ± 1 second
Terminal Strength	No lead-coming off and loose terminals	—	Twist 360°C, 5 times
Rapid Change of Temperature	±1%	±0.5%	-55°C (30 minutes), +125°C (30 minutes), 5 cycles
Moisture Resistance	±5%	±2.5%	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±3%	±1.5%	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Resistance to Solvent (CFS & CFPS only)	No abnormality in appearance. Marking shall be easily legible.	—	Ultrasonic washing with Isopropyl alcohol for 2 minutes. Power: 0.3W/cm², f: 28kHz, temp: 35°C±5°C
Flame Retardant (CFS & CFPS only)	No evidence of flaming or self-flaming	—	Flame test: The test flame shall be applied and removed for each 15 seconds respectively to repeat the cycle 5 times. Overload flame retardant: Power (AC) corresponding to 2, 4, 8, 16 and 32 times the power rating shall be applied for each 1 minute until disconnection occurs. However the applied voltage shall not exceed 4 times the maximum operating voltage.

KOA SPEER ELECTRONICS, INC.

MF, MFS, RK

general purpose metal film leaded resistor

EU RoHS COMPLIANT

features

- Semi-precision metal film resistors
- Meets requirements of MIL-R-22684
- Suitable for automatic machine insertion
- MFS two times the power rating of the standard body type
- Products with lead-free terminations meet EU RoHS and China RoHS requirements
- AEC-Q200 Qualified: MF1/4, MFS1/4, MFS1/2

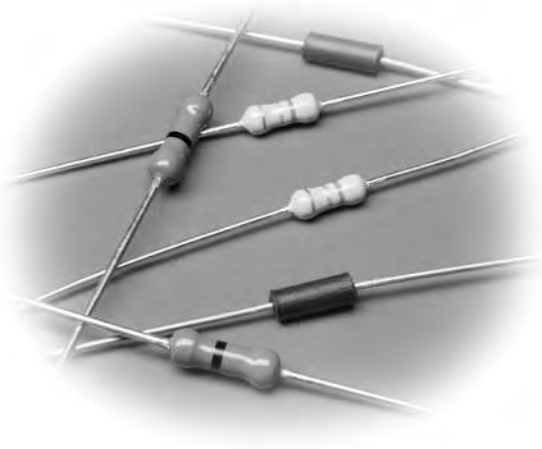
Resistance to Solvent	No abnormality in appearance. Marking shall be easily legible	—	The resistor shall be immersed for 5 seconds in IPA
Impulse	No such abnormalities as short-circuit, burnout, breakdown, etc.	—	Discharge from 1000pF capacitor 50 pulses. Internal 2.5 seconds. Charge voltage: 1.25kV (RK1/4), 2.5kV (RK1/2) and 6kV (RK1)



features

- Type Z are conformal coated
- Type J are molded
- Suitable for automatic machine insertion
- Size compatible with 1/8, 1/4 and 1/2 watt resistors
- Marking: Type Z are tan color, single black band identifier
  Type J are black, no marking
- Products with lead-free terminations meet EU RoHS and China RoHS requirements

12/24/13

features

- Excellent anti-surge characteristics
- Stable characteristics of moisture resistance up to high resistance range
- RCR50 +(1MΩ - 12MΩ), RCR50EN (1MΩ - 12MΩ) and RCR60 (1MΩ - 12MΩ) are discharge resistors recognized by UL1676 and c-UL(CSA-C22.2 No.1-M94)
- RCR25EN (100kΩ~33MΩ), RCR50EN (100kΩ - 33MΩ) and RCR60 (100kΩ - 56MΩ) is approved by EN6234-68-1 G.10 safety
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- Surface mount style “N” forming is suitable for automatic mounting

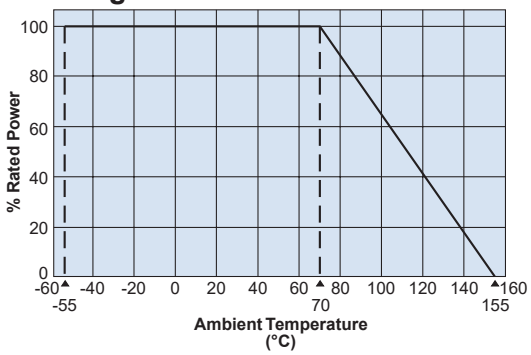
environmental applications

Derating Curve

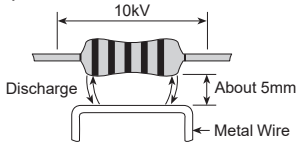


For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Notice of Surge Load

Surge withstanding load voltage for the resistors cannot be guaranteed when the undermentioned 4 items get to a remarkable overload in comparison with the conditions shown by surge withstanding voltage in Anti-surge characteristics. Please contact KOA in advance if such a case is anticipated.

1. Peak voltage to be applied
2. Pulse width
3. Conditions of protecting insulation around the resistor
4. Situation of proximity conductivity object



For example: In the figure, a metal wire is placed less than 5mm away from the resistor body, there is such a case that causes an electric discharge by a surge load 10kV and then destroys the outer coating.

EU RoHS COMPLIANT

features

- Miniature construction can endure to high voltage and high power
- Excellent in anti-surge characteristics
- Wide resistance range of 0.5MΩ - 10GΩ and small T.C.R.
- Product meets EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in resistor element and brass cap.

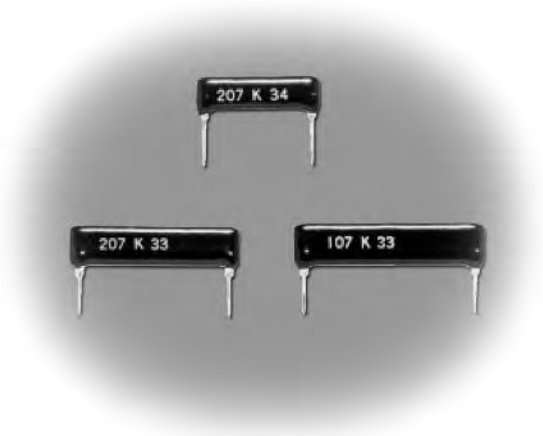
RK92

thick film resistors for high voltage

EU RoHS COMPLIANT



features

- High resistance resistors for high voltage circuits
- Thin SIP shape
- The flame retardant coats corresponding to UL94V-0 are used
- Thick film resistors (RuO_2) ensure high stabilities in life and change in aging
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.

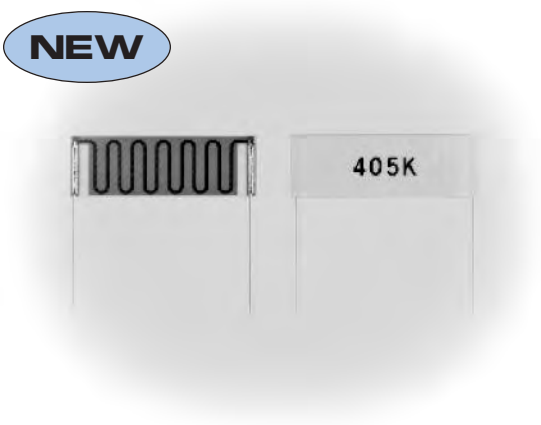
RK92-L

thick film resistors for high voltage

EU RoHS COMPLIANT

NEW



features

- Resistors excellent in overload capability
- Thin SIP shape
- Thick film resistors (RuO_2) ensure high stabilities in life and change in aging
- Meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.

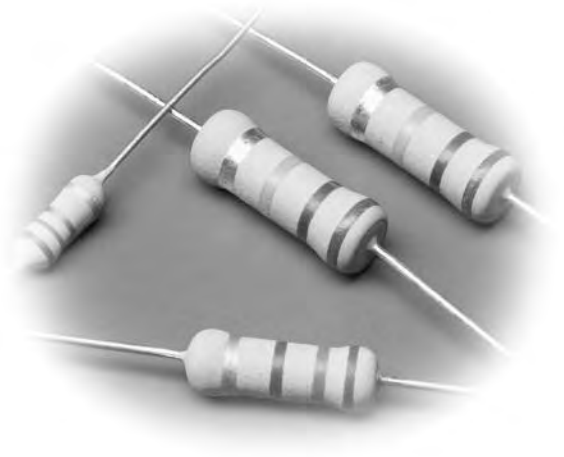
EU RoHS COMPLIANT



features

- KOA original bulk ceramic resistors
- Coated with UL94V0 flameproof material
- Excellent in anti-pulse characteristics
- Non-inductive resistors
- Products with lead-free terminations meet EU RoHS requirements. RoHS regulation is not intended for Pb-glass contained in the electrode.
- Higher reliability against disconnection compared to wirewound resistors and film resistors
- AEC-Q200 Qualified

Derating Curve

For resistors operated at an ambient temperature of 40°C or higher, the power rating shall be derated in accordance with this derating curve.

Performance Characteristics

Parameter	Requirement Δ R ±(%+0.05Ω) Limit	Typical	Test Method
Resistance	Within regulated tolerance	—	Resistance: 1kΩ, 2kΩ, 5kΩ — Measurement Voltage: 10V; Resistance: 10kΩ, 15kΩ — Measurement Voltage: 30V; 25°C
T.C.R.	-1200±300ppm/°C	—	+25°C/-40°C and +25°C/+125°C
Voltage Coefficient	0 ~ -0.2%/V	—	Rated voltage and rated voltage x 10%
Overload	2	0.3	Rated voltage x 2.5 or max. overload voltage for 5 seconds, whichever is less
Load Life at High Voltage Pulse	30	—	Continuous 250h high voltage pulse on the test circuit (Refer to JIS D5111) CPCN1/2, CPCN1 in insulation oil
Resistor Body Strength	No mechanical damages	—	CPCN1/2: Holding Distance 5.0 ± 0.2mm; CPCN1: 9.0 ± 0.3mm; CPCN2N/2NS: 12.3 ± 0.3mm; CPCN3: 12.3 ± 0.3mm; Time: 10 seconds; Force: 98N (10kgf); CPCN3: 490N (50kgf)
Rapid Change of Temperature	5.0	—	-55°C (15 minutes), +155°C (15 minutes), 500 cycles
Moisture Resistance	5.0	0.9	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Load Life	5.0	0.7	40°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Low Temperature Operation	5.0	0.7	-40°C, 24 hours
High Temperature Exposure	5.0	2.0	+200°C, 1000 hours

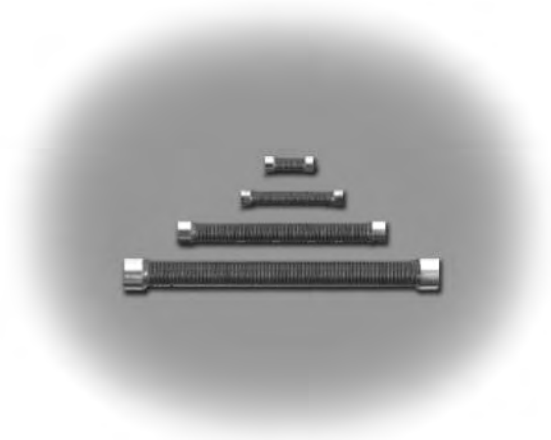
The resistance measurement before and after the examination should be performed in room temperature with difference ±1°C.

PSN, PV, PSO, PN, PWW, PAP

high voltage power resistors

KOA SPEER ELECTRONICS, INC.

EU RoHS COMPLIANT



features

- PSO is made completely moisture preventive to be PSN that can be used under high moisture environment
- PN is a non-inductive type and can be used for high frequency
- PWW resistors, which are non-inductive wirewound resistors for high voltage with resistance wires wound on insulation pipes
- PAP resistors are non-inductive wirewound resistors with inductance less than PWW, can be used for pulse wave measurement, impulse generators, etc. and have the same dimensions as PWW resistors

MOS

reduced size metal oxide power type leaded resistor

features

- Small size power type resistor
- Coated with UL94V0 equivalent flameproof material
- Suitable for automatic machine insertion
- Products with lead-free terminations meet EU RoHS and China RoHS requirements
- Surface mount style “N” forming is suitable for automatic mounting

EU RoHS COMPLIANT

leaded resistors

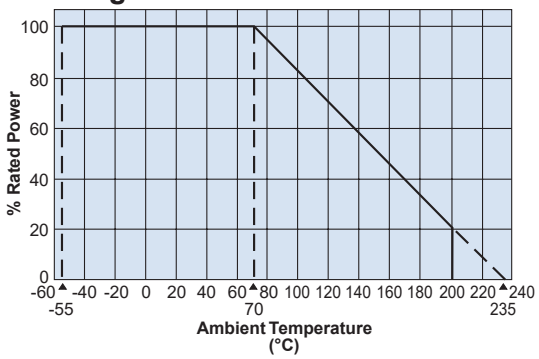
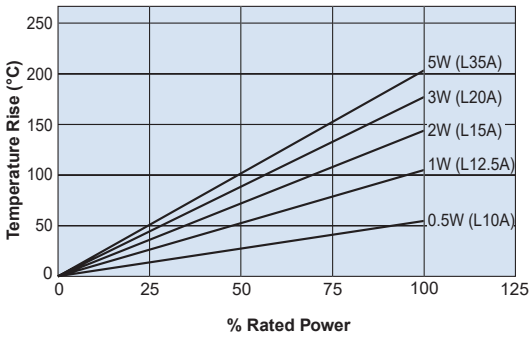
environmental applications

Derating Curve



Surface Temperature Rise



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Performance Characteristics

Parameter	Requirement ∆ R ±(% + 0.05Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	Measuring points are at 10mm ±1mm from the end cap.
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C
Overload (Short time)	±(2% +0.1Ω)	±1%	Rated voltage x 2.5 for 5 seconds
Resistance to Solder Heat	±1%	±0.5%	260°C ±5°C, 10 seconds ± 1 second
Terminal Strength	No lead-coming off and loose terminals	—	Twist 360°C, 5 times
Rapid Change of Temperature	±1%	±0.5%	-55°C (30 minutes), +155°C (30 minutes), 5 cycles
Moisture Resistance	±(5%+0.1Ω)	±2.5%	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±(5%+0.1Ω)	±2.5%	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Resistance to Solvent	No abnormality in appearance. Marking shall be easily legible	—	Ultrasonic washing with isopropyl alcohol for 2 minutes. Power: 0.3W/cm³, f: 28kHz, Temp: 35°C ±5°C
Flame Retardant	No evidence of flaming or self-flaming	—	Flame test: the test flame shall be applied and removed for each 15 seconds respectively to repeat the cycle 5 times. Overload flame retardant: power (AC) corresponding to 2, 4, 8, 16 and 32 times the power rating shall be applied for each 1 minute until disconnection occurs. However the applied voltage shall not exceed the value of 4 times of the maximum operating voltage

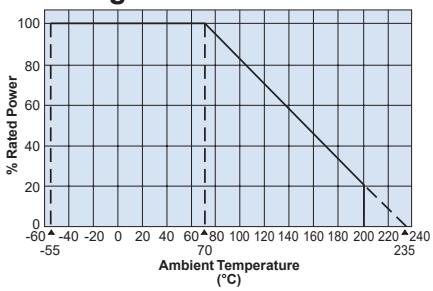
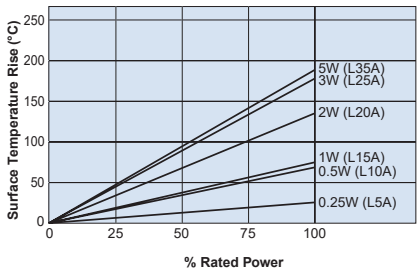
Rated Ambient Temperature: +70°C

environmental applications

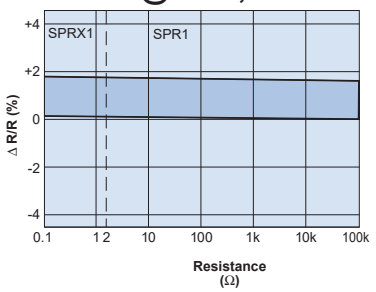
Derating Curve



Surface Temperature Rise



Load Life @ 70°C, 1000 Hr



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Performance Characteristics

Parameter	Requirement Δ R ±(% + 0.05Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	Measuring points are at 10mm ±1mm from the end cap.
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C
Overload (Short time)	±(1%+0.1Ω)	±0.5%	Rated voltage x 2.5 or max. overload voltage for 5 seconds, whichever is lower
Resistance to Solder Heat	±1%	±0.5%	260°C ±5°C, 10 seconds ± 1 second
Terminal Strength	No lead-coming off and loose terminals	—	Twist 360°C, 5 times
Rapid Change of Temperature	±1%	±0.5%	-55°C (30 minutes), +155°C (30 minutes), 5 cycles
Moisture Resistance	±(3%+0.1Ω):1/4W-2W ±(5%+0.1Ω):3W,5W	1.5: 1/4W-2W 2.5: 3W, 5W	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±(3%+0.1Ω):1/4W-2W ±(5%+0.1Ω):3W,5W	1.5: 1/4W-2W 2.5: 3W, 5W	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Resistance to Solvent	No abnormality in appearance. Marking shall be easily legible	—	Ultrasonic washing with isopropyl alcohol for 2 minutes. Power: 0.3W/cm³, f: 28kHz, Temp: 35°C ±5°C
Flame Retardant	No evidence of flaming or self-flaming	—	Flame test: the test flame shall be applied and removed for each 15 seconds respectively to repeat the cycle 5 times. Overload flame retardant: power (AC) corresponding to 2, 4, 8, 16 and 32 times the power rating shall be applied for each 1 minute until disconnection occurs. However the applied voltage shall not exceed the value of 4 times of the maximum operating voltage

KOA SPEER ELECTRONICS, INC.

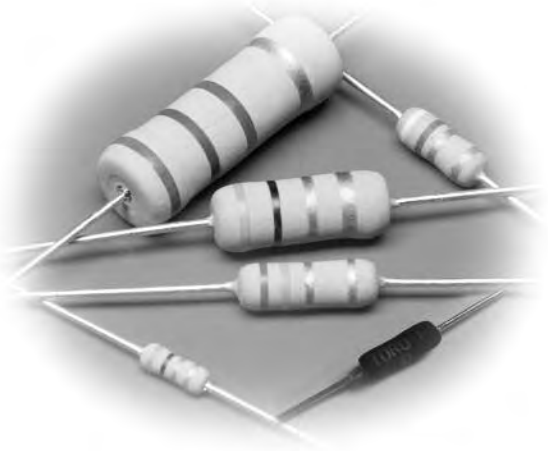
CW, CWP, CWH

coat-insulated, precision coat-insulated and miniature wirewound leaded resistors



EU RoHS COMPLIANT

features

- Flameproof silicone coating equivalent (UL94V0)
- CWH resistors meet MIL-PRF-26 (U characteristics)
- CWH high precision resistors with T.C.R. less than ±50x10^{-6}/K
- Suitable for automatic machine insertion
- Various types of formings are available
- Excellent in pulse characteristic
- Products with lead-free terminations meet EU RoHS and China RoHS requirements
- CW1SS has UL1412 approval (File No. E320246)
- Surface mount style “N” forming is suitable for automatic mounting CW, CWP

features

- Resistors meeting MIL-R-26E (U and V characteristics) and surface temperature (hot spot) 350°C max.
- Resistors with a wide range of 0.1Ω ~ 62kΩ, covering applications from precision to power
- RW☐N type resistors are non-inductive wound and can be used in high frequency applications.
- Products with lead-free terminations meet EU RoHS and China RoHS requirements

KOA SPEER ELECTRONICS, INC.

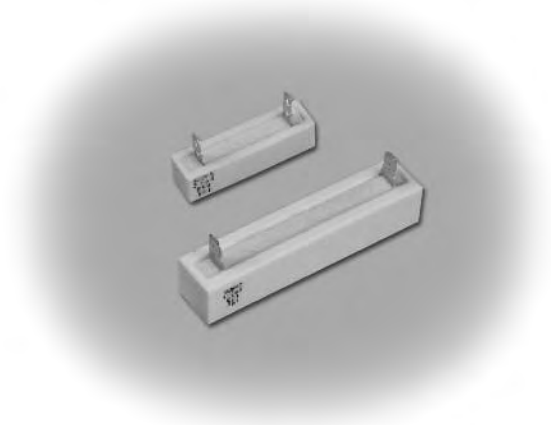
BGRV, BSRV

rectangular type wirewound resistors with glass core (for automotive)
rectangular type metal oxide film resistors (for automotive)



features

- High power resistors
- Uses flame-retardant insulated ceramic case
- Excellent in anti-pulse and in rush current
- Suitable for high reliable applications like automotives
- AEC-Q200 qualified.
- Products meet EU RoHS requirements

EU RoHS COMPLIANT

leaded resistors

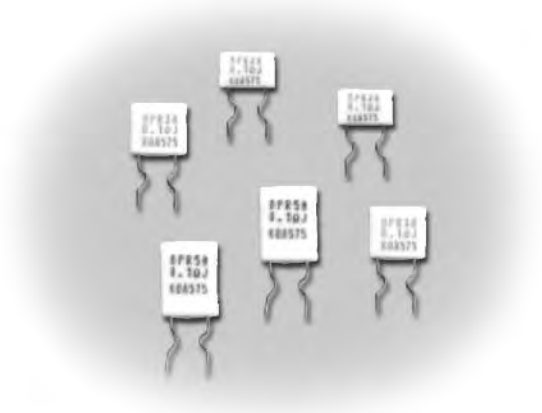
EU RoHS COMPLIANT



features

- Power type current detecting resistors
- Flame retardant resistors in ceramic case
- Automatic insertion for a 5mm pitch between terminals is applicable (26 type, 58 type)
- Low inductance
- Space saving
- Marking: Alpha/numeric marking
- Products with lead-free terminations meet EU RoHS requirements

Resistance to Solder Heat	±2.0%	±1.0%	260°C ± 5°C, 10 seconds ± 1 second
Moisture Resistance	±5.0%	±3.0%	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±5.0%	±3.0%	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	±3.0%	±2.0%	+125°C, 100 hours
Resistance to Solvent	No evidence of damage to protective coating and marking	—	After immersing the sample in I.P.A for 60 seconds ± 10 seconds, the resistor surface should be rubbed with absorbent cotton 10 times

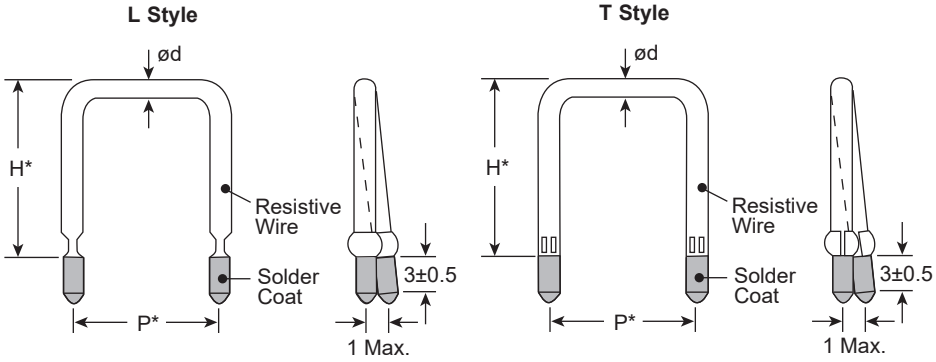
12/18/12

EU RoHS COMPLIANT

features

- The super low resistance (3mΩ ~) is suitable for high power current detection
- Pitches and heights adjustable according to mounting conditions
- All custom-made products
- Easy soldering
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.

dimensions and construction



* Please consult with factory about dimensions “P” and “H”
T style is applied for the diameter of ø 2.3 or above

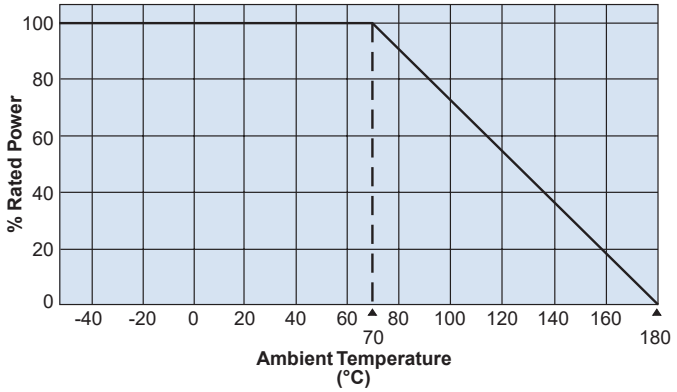
environmental applications

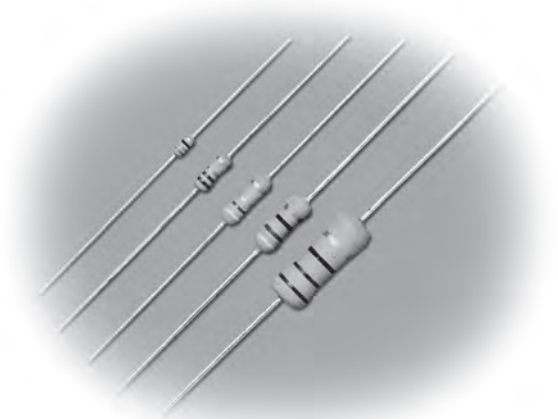
Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Performance Characteristics

Parameter	Requirement Δ R ±% Limit	Typical	Test Method
Resistance	Within specified tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C
Resistance to Soldering Heat	±2.0%	±1.6%	350°C ± 10°C, 3 seconds
Moisture Resistance	±3.0%	±2.7%	Power rating x 1/10, 40°C, 90% - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±5.0%	±3.0%	Rated voltage, 70°C, 1000 hours 1.5 hr ON, 0.5 hr OFF cycle



features

- Functions as a resistor in normal condition
- Quick fusing protects circuit from excessive overload at an abnormal time
- Flame-retardant coating equivalent to UL94 V-0
- Products meet EU RoHS requirements

EU RoHS COMPLIANT

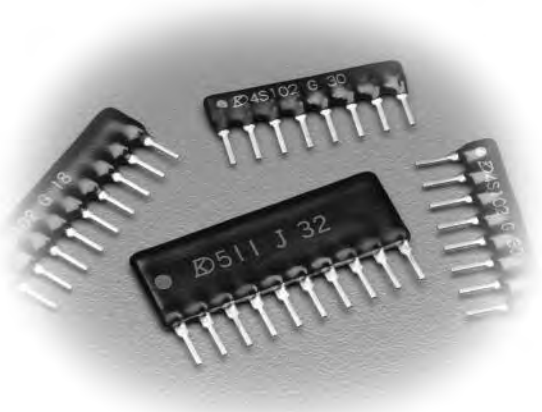
RKC, RKH, RKL

thick film SIP resistors

EU RoHS COMPLIANT



features

- Various types of standard circuits in different sizes and power are available. (Seated height 0.20" (5.08mm), 0.26" (6.5mm), 0.42" (10.7mm) Max.)
- Higher temperature soldering of the leads prevents terminals from loosening during board assembly
- For automatic insertion machines, stick magazines (the tip of lead terminal is cut to a V shape) and taping packages (TBA: All leads taping, TPA, TUA: 3 leads taping) are applicable.
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.

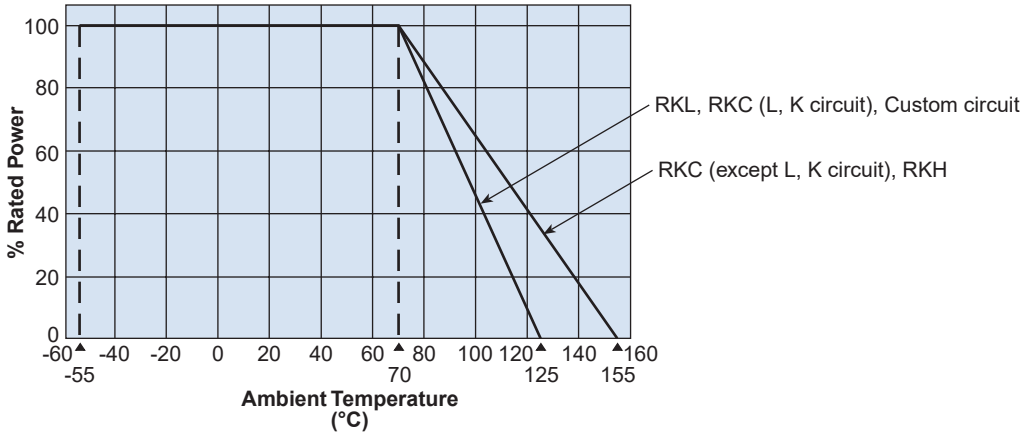
environmental applications

Derating Curve



For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Performance Characteristics

Parameter	Requirement Δ R ±(%+0.05Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/-55°C, +25°C/+125°C (RKL) +25°C/-55°C, +25°C/+155°C (RKC, RKH)
Overload (Short time)	±0.5%	±0.25%	Rated voltage x 2.5 for 5 seconds
Resistance to Solder Heat	±0.5%	±0.25%	260°C ± 5°C, 10 seconds ± 1 second
Temperature Cycling	±0.5%	±0.25%	-40°C (30 minutes), +85°C (30 minutes), 5 cycles
Moisture Resistance	±2.0%	±1.0%	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±2.0%	±1.0%	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle

features

- Metal glaze resistors (RuO2) provide lifetime stability
- Free from short circuit, unexpected solder melting and terminal disconnection due to the high temperature solder used to connect terminals
- Capable of reducing the numbers of parts and part insertions
- Custom orders are available
- Products with lead-free termination meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass

When ordering the CR series, please indicate the following items shown below:

For circuit code A – F, please indicate the following items:
Resistance
Capacitance
Operating voltage
Capacitance tolerance
T.C.

For circuit code M, please add the following items:
Circuit schematics
Pin layout
Dimensions
Conditions for use
Resistor (Power rating, Tolerance, T.C.R.)

Precautions for the Thermal Sensors

Refer to the precautions of common matters for all products in the beginning of this catalog.

Particulars Common to Thermal Sensors

- Excessive voltage such as ESD, could damage thermal sensors.
- Water drops from condensation or impure substances that adheres between the electrode wires may cause insulation deficiency and lower the resistance value of the thermal sensors. Be aware when using this product.
- Avoid applying thermal shocks with large temperature difference in order to maintain the accuracy of the thermistor.
- Some of the thermal sensors use special temperature sensing films. Contact us if the sensors are constantly operated under high temperature environment.

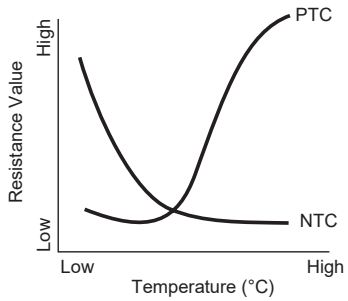
Platinum Thin-Film Thermal Sensors

- Welding is recommended to connect the lead wires of SDT101B, SDT310P, SDT310MTM, SDT310AP, SDT310HCTP and SDT310VASP since they are heat resistant lead wires. Select the flux for stainless-steel when soldering. Wash the flux with hot water after the soldering to remove the residue completely.
- The 3-wire or 4-wire method is recommended for implementing high precision temperature measuring for both SDT101 and SDT310 series.
- When molded or placed in a metal tube filled with resin, the resistance value may change depending on the kind of resins used.

Terms and Definitions

Thermistor

- Thermally sensitive resistors, constructed from temperature sensitive semi-conductive materials, with predictable, large variation in resistance due to change in temperature. There are two kinds of thermistors characterized by resistance change.
- PTC (Positive Temperature Coefficient): Resistance increases with a rise in temperature.
- NTC (Negative Temperature Coefficient): Resistance decreases with a rise in temperature.



Rated Power

- The maximum wattage which can be continuously applied to a resistor at the rated ambient temperature.

Critical Resistance Value

- The maximum nominal resistance value at which the rated power can be applied without exceeding the maximum working voltage.
- The rated voltage is equal to the maximum working voltage at the critical resistance value.

Maximum Working Voltage

- Maximum D.C. or A.C. voltage that can be continuously applied to a resistor or a thermosensor. However, the maximum value of the applicable voltage is the rated voltage at the critical resistance value or lower.

Overload Voltage

- Allowable voltage which is applied for 5 sec. according to the short time overload test. Overload voltage shall be 2.5 times of rated voltage or max. overload voltage, whichever is lower.

Curie Temperature (PTC)

- The temperature at which the resistance value starts to increase rapidly. It is also called the switching temperature.

Resistance-Temperature Characteristic of a Thermistor (NTC)

- The relationship between a zero load resistance and a temperature or a temperature range. It can be expressed using the following formula:

$R = R_0 \exp\{B(1/T - 1/T0)\}$

R : Resistance Value at Temperature T (K)

R_0 : Resistance Value at Temperature T_0 (K)

B : B Constants T (K)=t (°C)+273.15

B Constant of a Thermistor (NTC)

- Size of change in the resistance between any two temperatures within a specified range is calculated using the following formula:

$$B\,(K) = \frac{\ln R - \ln R_1}{1/T - 1/T_1}$$

R : Resistance Value in T (K)

R_1 : Resistance Value in T1 (K)

T : Standard Temperature (K)

T_1 : Regulated Temperature (K)

Thermal Dissipation Constant

- The necessary power which is needed to increase the temperature of the element 1℃ by self heating and is expressed with the following formula:

$\delta(W/°C) = W/(T_1 - T)$

W : Electrical input power (W)

T : Standard Temperature (℃)

T_1 : Self heating temperature generated by applied power (°C)

Temperature Coefficient of Resistance (T.C.R.)

- Relative variation of resistance between two given temperatures when temperature is changed by 1K, which is calculated by the following formula.

$$\text{T.C.R. (ppm/°C)} = \frac{R - R_0}{R_0} \times \frac{1}{T - T_0} \times 10^6$$

R : Resistance value (Ω) at T

R_0 : Resistance value (Ω) at T_0

T : Measured test temperature (°C)

T_0 : Measured base temperature (°C)

Rated Temperature

- Maximum ambient temperature at which the power rating may be applied continuously. The rated ambient temperature refers to the temperature around the resistor mounted inside the equipment, not to the air temperature outside the equipment.

Derating Curve

- Plot that expresses the relation between ambient temperature and the maximum allowable power, which is generally expressed in percentage.

Thermal Time Constant

- Time needed for a sensor's temperature to change 63.2% when the ambient temperature of a sensor is rapidly changed by a condition in which self heat generation can be ignored.

External Conductor

- A conductor connected to a temperature sensor that is located outside of the protective body.

Internal Conductor

- A conductor connected to a temperature sensor that is located inside of the protective body.

KOA SPEER ELECTRONICS, INC.

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 140.40Ω. The value for 500Ω at 0°C will be the value obtained by multiplying the resistance value in this table by 5.

thermal sensors

Performance Characteristics

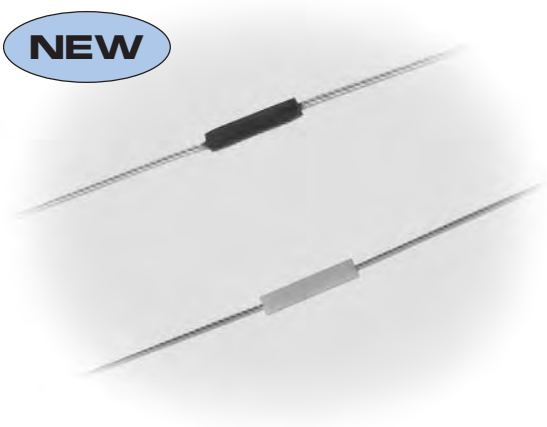
Parameter	Requirement △ R ±(%+0.05Ω) Limit	Typical	Test Method
High Temperature Exposure	±0.5%	-0.022%	+155°C, 1000 hours
Rapid Change of Temperature	±0.5%	-0.058%	-55°C (30 minutes)/ +25°C (2 - 3 minutes)/ +155°C (30 minutes)/ +25°C (2 - 3 minutes), 1000 cycles
Moisture Resistance	±0.5%	-0.041%	25°C, -65°C (90 - 100% RH), t= 24 hours/cycle. Unpowered. It is carried out 10 times.
Moisture Resistance	±0.5%	-0.016%	85°C, 85% RH, 1000 hours, 1mA, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Load Life	±0.5%	-0.017%	155°C, 1000 hours, 1mA continuous turning on electricity
Mechanical Shock	±0.5%	-0.001%	100gs Maximum, 6Dms (Standard), 12.3 feet/second
Vibration	±0.5%	-0.009%	Test from 10-2000Hz, 5g's for 20 minutes, 12 cycles each of 3 orientations
Resistance to Solder Heat	±0.5%	-0.004%	260°C for 10 seconds
Thermal Shock	±0.5%	-0.032%	-55°C (15 minutes)/ +155°C (15 minutes), 300 cycles
Solderability	95% Coverage Min.	—	235°C±5°C, 3 seconds ± 0.5 seconds
Terminal Strength	±0.5%	-0.011%	1.8kg force is kept on the samples for 60 seconds

KOA SPEER ELECTRONICS, INC.

SDT310VASP

small type platinum thin film thermal sensors (small heater element)

NEW

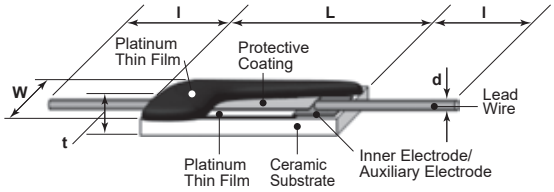


features

- Small as quarter volume of conventional type. 3.2 second thermal time constant.
- Excellent heat-resistance
- Applies axial lead type suitable to use as heater element
- Products with lead-free terminations meet EU RoHS requirements
- AEC-Q200 Qualified

EU RoHS COMPLIANT

dimensions and construction



Type	Dimensions inches (mm)				
	W	L	t	d (Nom.)	l
SDT310VASP	.016 $^{+.006}_{-.004}$ (0.4 $^{+0.15}_{-0.1}$)	.079±.004 (2.0±0.10)	.026 max. (0.65 max.)	.006±.002 (ø0.15±0.05)	.394±.079 (10±2.0)

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 28.08Ω.

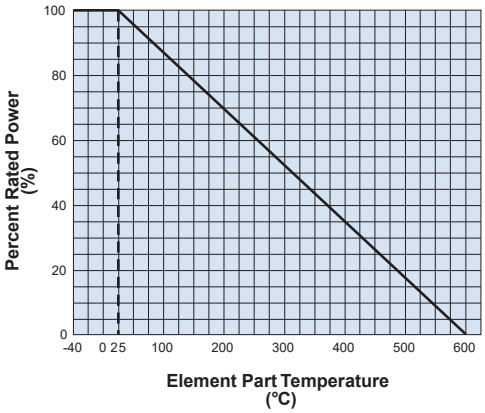
Derating Curve



For sensors operated at an element part temperature of 25°C or above, a power rating shall be derated in accordance with the above derating curve.

Performance Characteristics

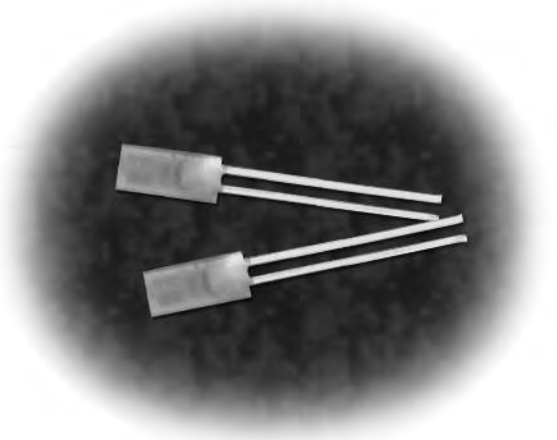
Parameter	Requirement Δ R (%+0.05Ω)	Test Method
Resistance	Within specified tolerance	0°C
T.C.R.	Within specified T.C.R.	0°C/ +100°C
Rapid Change of Temperature	±0.5%	-55°C (30 minutes)/ +200°C (30 minutes) 1000 cycles
Moisture Resistance	±0.5%	85°C ± 2°C, 85% RH, 1000 hours, 10mA, 1.5 hr ON, 0.5 hr OFF cycle
Normal Temperature Load Life	±0.5%	25°C ± 10°C, 1000 hours, 90mA, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Load Life	±0.5%	125°C, 1000 hours, 85mA continuous turning on electricity
Mechanical Shock	±0.5%	100g's maximum, 6Dms (standard), 12.3ft/s
Vibration	±0.5%	Test from 10-2000hz 20g's for 20 minutes, 12 cycles each of 3 orientations
Component Strength	600g and more	Pull test

KOA SPEER ELECTRONICS, INC.

SDT310HCTP

small type platinum thin film thermal sensors (narrow)

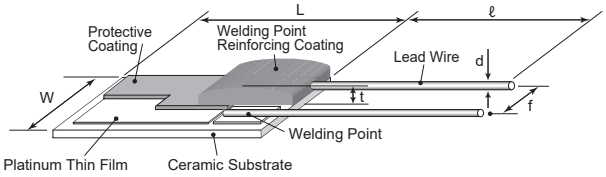
EU RoHS COMPLIANT



features

- Characteristics are equivalent with IEC 60751-2008, JISC 1604-2013
- Small package of 1.2mm x 3mm with 1kΩ resistance
- Products meet RoHS requirements. RoHS regulation is not intended for Pb-glass contained in glass.

dimensions and construction



Type	Dimensions inches (mm)					
	W	L	t	f (Nom.)	d	l

* [t] is a measuring temperature indicated at ℃ that is not related to marking + · −.
** T.C.R. Mesuring Temperature : 0℃/+100℃.
*** Thermal time constant is value measured in stationary air and is typical value, which is value of element and vary with connecting or fixing methods.
**** Self-heating coefficient expressed in ℃/mW is values measured at temperature : 0℃ in flowing oil with a velocity >0.2m/s, which is value of elements and vary with connecting or fixing methods.
***** Specified current is a current value that is used at reliability test under the condition of self heat-generation that can be disregarded. Recommended measuring currents 1mA for 100Ω.

environmental applications

Performance Characteristics

Parameter	Requirement Δ R ±(%) Limit	Typical	Test Method

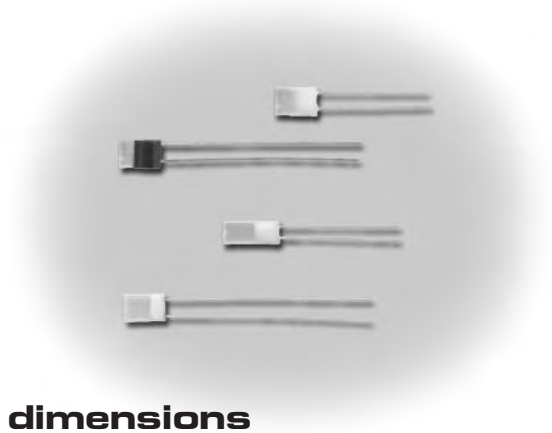
Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 140.40Ω.

KOA SPEER ELECTRONICS, INC.

SDT310

small type platinum thin film thermal sensors

EU RoHS COMPLIANT



features

- T.C.R. is in accordance to JIS-DIN IEC standards
- The small package with a real ability of 1kΩ resistance
- Thermal time constant is improved with the small package
- Products with lead-free terminations meet EU RoHS requirements. Pb located in glass material, electrode and resistor element is exempt per Annex 1, exemption 5 of EU directive 2005/95/EC.

* T.C.R. measuring temperature: 0°C/+100°C.

** Thermal time constant and thermal dissipation constant are values measured in stationary air and are typical values, which are values of elements and vary with connecting or fixing methods.

*** The electricity which it is charged with in the element is moved to the range that rise in temperature due to a self-heat generation can be ignored. Recommended measuring currents are 1mA for 100Ω and 0.1mA for 500Ω or 1kΩ. SDT310AP can be used as hot-film sensor. Maximum specified current is 100mA when using under self-heating condition.

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 140.40Ω. The value for 500Ω at 0°C will be the value obtained by multiplying the resistance value in this table by 5. Similarly, the value for 1KΩ at 0°C will be the value obtained by multiplying the resistance value by 10.

environmental applications (continued)

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 140.40Ω. The value for 500Ω at 0°C will be the value obtained by multiplying the resistance value in this table by 5. Similarly, the value for 1KΩ at 0°C will be the value obtained by multiplying the resistance value by 10.

Performance Characteristics

Parameter	Requirement Δ R (%+0.05Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	0°C
T.C.R.	Within specified T.C.R.	—	0°C/ +100°C
Insulation Resistance	100MΩ or more	—	d.c. 100V
Dielectric Withstanding Voltage	±0.12%	±0.010%	a.c. 100V, 60 seconds - 70 seconds
Resistance to Solder Heat	±0.5%	±0.014%	350°C for 3.5 seconds
Rapid Change of Temperature	±0.12%	-0.026%	-55°C (30 minutes)/ +25°C (2 - 3 minutes)/ +155°C (30 minutes)/ +25°C (2 - 3 minutes), 10 cycles (SDT310LTC, SDT310HLTC); -55°C (30 minutes)/ +25°C (2 - 3 minutes)/ +400°C (30 minutes)/ +25°C (2 - 3 minutes), 10 cycles (SDT310P, SDT310A); +25°C (30 minutes)/ +650°C (30 minutes) 10 cycles (SDT310MTM)
Moisture Resistance	±0.5%	-0.004%	60°C ± 2°C, 90 - 95% RH, 1000 hours, 1mA, 1.5 hr ON, 0.5 hr OFF cycle
Normal Temperature Load Life	±0.5%	-0.017%	20°C ± 10°C, 1000 hours, 1mA continuous turning on electricity
High Temperature Load Life	±0.5%	-0.022%	155°C ± 2°C (SDT310LTC, SDT310HLTC), 400°C ± 8°C (SDT310P, SDT310AP), 1000 hours, 650°C ± 13°C (SDT310MTM), 250 hours, 1mA continuous turning on electricity
High Temperature Exposure	±0.12%, ±0.5% (SDT310MTM)	-0.027%, -0.060% (SDT310MTM)	+155°C (SDT310LTC, SDT310HLTC), +400°C (SDT310P, SDT310AP), +650°C (SDT310MTM), 250 hours
Low Temperature Exposure	±0.12%	-0.036%	-55°C, 250 hours

KOA SPEER ELECTRONICS, INC.

SDT101

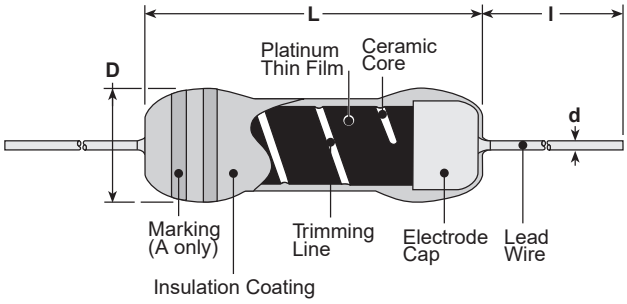
platinum thin film thermal sensors

EU RoHS COMPLIANT

features

- Stable characteristics even in use for a long time with an excellent environment resistance
- Products with lead-free terminations meet EU RoHS and China RoHS requirements
- AEC-Q200 Qualified (SDT101B 500Ω only)

dimensions and construction



Type	Dimensions inches (mm)			
	L	D	d (Nom.)	l
SDT101A	.157±.031 (4.0±0.8)	.063±.008 (1.6±0.2)	.016±.003 (0.4±0.08)	1.18±.118 (30±3)

* Products of resistances measures at 25°C are also available. (But T.C.R.s will be measured at 0°C/100°C.) Consult the factory.

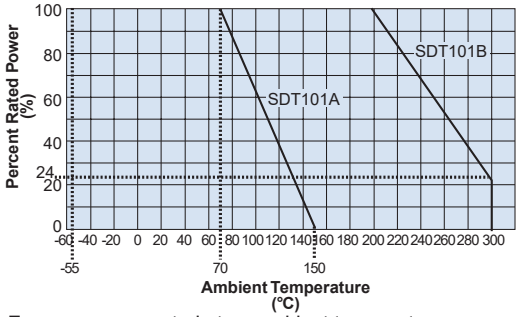
applications and ratings

Part Designation	Power Rating @ 70°C*	Thermal Time Constant*	Thermal Dissipation Constant*	Resistance Range	Resistance Tolerance	T.C.R. (ppm/°C)	T.C.R. Tolerance (ppm/°C)	Rated Ambient Temperature	Operating Temperature Range
SDT101A	0.125W	6 seconds	2.8mW/°C	10Ω, 100Ω, 500Ω	D: ±0.5% F: ±1%	3500	F: ±1% G: ±2%	+70°C	-55°C to +150°C
SDT101B		9 seconds	1.8mW/°C					+200°C	-55°C to +300°C

* Thermal time constant and thermal dissipation constant are reference values, which are values of elements and vary with connecting or fixing methods. T.C.R. measuring temperature: 0°C/+100°C

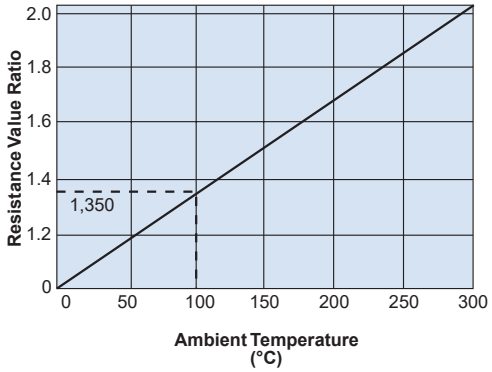
environmental applications

Derating Curve



For sensors operated at an ambient temperature or above, a power rating shall be derated in accordance with the above derating curve.

Example of Temperature Characteristics of Resistance



Approximate Expression for Resistance-Temperature Characteristics

R_T: Resistance value at T°C
R_0: Resistance value at 0°C
T: Ambient temperature (°C)
Constants C_1, C_2:
$C_1=0.356297\times10^{-2}$ $C_2=0.617945\times10^{-6}$

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 136.72Ω. The value for 500Ω at 0°C will be the value obtained by multiplying the resistance value in this table by 5. Similarly, the value for 10Ω at 0°C will be the value obtained by dividing the resistance value by 10.

Performance Characteristics

Parameter	Requirement Δ R ±(%+0.05Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	0°C
T.C.R.	Within specified T.C.R.	—	0°C/ +100°C
Overload (Short Time)	±0.5%	±0.2%	Rated voltage x 2.5 for 5 seconds
Resistance to Solder Heat (SDT101A)	±0.3%	±0.1%	350°C, 1 second
Rapid Change of Temperature	±0.5%	±0.2%	-55°C (30 minutes)/ +25°C (10 minutes)/ +150°C (30 minutes)/ +25°C (10 minutes), 5 cycles
Moisture Resistance	±1%	±0.3%	80°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±1%	±0.2%	70°C ± 3°C (SDT101A), 200°C ± 3°C (SDT101B), 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	±1%	±0.7%	+150°C (SDT101A), +300°C (SDT101B), 1000 hours
Shelf Life	±0.3%	±0.1%	Left for 1 year on shelf in natural condition

RoHS COMPLIANT

features

- All ST-series thermal sensors are custom-made products. ST-series thermal sensors are designed in various shapes in accordance with your application using a platinum thin-film thermal sensor (SDT101, SDT310 series) as an element. Shapes of sensor parts can be designed flexibly to meet your shapes and dimensional needs, from simple resin mold parts to sensor parts sealed in metal protective tubes made of SUS316.

ordering information

ST3000 Series

ST	31050201	F	A	X	1K	B	D
Type	Type Number	Pb Free Symbol	Element Type	Reference Temperature	Nominal Resistance**	Resistance Tolerance**	T.C.R. Tolerance
			A: SDT101	X: 0°C	100: 100Ω 500: 500Ω 1K: 1kΩ	B: ±0.1% C: ±0.2% D: ±0.5% F: ±1%	D: ±0.5% F: ±1% G: ±2%

* ST3000 series products with a reference temperature of 25°C (T.C.R. will be calculated between 0°C/100°C.) are also available. Contact us.

**These are specified for inner element only

ST8100 Series

ST	8102201	F	B	X	1K	B
Type	Type Number	Pb Free Symbol	Element Type	Reference Temperature	Nominal Resistance	Class
			B: SDT310LTC C: SDT310P	X: 0°C	100: 100Ω 500: 500Ω 1K: 1kΩ	B: ±(0.3+0.005 [t]) C: ±(1.0+0.01 [t])

applications and ratings

Part Designation	Element	Resistance Value at 0°C	Class: Tolerance to Measuring Temperature	Resistance Tolerance	T.C.R. (x 10^{-6}/K)	T.C.R. Tolerance (ppm/°C)
ST3000	SDT101A SDT101B	100Ω 500Ω 1kΩ	—	B: ±0.1% C: ±0.2% D: ±0.5% F: ±1%	3500	D: ±0.5% F: ±1% G: ±2%
ST8100	SDT310LTC SDT310P	100Ω 500Ω 1kΩ	B: ±(0.3+0.005[t]) C: ±(1.0+0.01[t])	—	3850	—

* ST3000 Series, 1kΩ, resistance tolerance B • C are produced in pair of SDT101Series. The combination of ST3000 series, resistance tolerance B-T.C.R. and tolerance D is equivalent to class B of SDT310 tolerance to the measuring temperature.

In the above table specification there are restrictions on manufacturing range depending on part number. Please refer to the Performance list.

environmental applications

Example of	Material
Processing Protective Tubes	PPS
	Epoxy resin coating
	Fluorine resin shrinkage tube
	Polyimide
	SUS304
	SUS316
	Cu

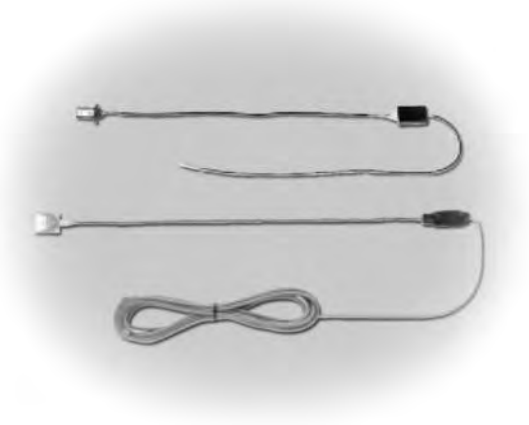
guarantee of product

The guaranteed term of the product is one year after delivery. However, when trouble occurs during the guaranteed term because of our responsibility, the product is exchanged or is repaired. We guarantee the product itself, any damages caused by this product shall be excused.



features

- The platinum thin-film thermal sensor realizes high and long-term stability
- The small platinum thin-film thermal sensor and an even temperature differential operating circuit ensure a quick response
- The built-in temperature compensation circuit assures correct values regardless of air temperature. The air velocity sensor and air velocity temperature compensation sensor are sensors with the same characteristics to enable correct temperature compensation
- Products have no rotating mechanism and are resistant to vibrations
- Products are compact and light, and are easy to be installed in equipment

KOA SPEER ELECTRONICS, INC.

LP73

thin film resistance thermal chip sensor

EU RoHS COMPLIANT

features

- Thin film thermal sensors of SMD type
- Resistance tolerance ±1%, a wide range of TCRs +3000x10^{-6}/K~+5000x10^{-6}/K with the standard products
- Suitable for control of temperatures in various industrial equipment
- Suitable for both flow and reflow soldering
- Products with lead-free terminations meet EU RoHS and China RoHS requirements

T.C.R.	Within specified T.C.R.	—	+25°C/+65°C
Overload	±0.5%	±0.3%	Rated voltage x 2.5 for 5 seconds
Resistance to Solder Heat	±0.5%	±0.3%	260°C ± 5°C, 10 seconds + 1 second/- 0 second
Rapid Change of Temperature	±0.5%	±0.3%	-55°C (30 minutes),+25°C (2-3 minutes), +125°C (30 minutes), +25°C (2-3 minutes), 5 cycles
Moisture Resistance	±2.0%	±1.5%	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hours ON, 0.5 hours OFF cycle
Endurance at 70°C	±2.0%	±1.5%	70°C ± 2°C, 1000 hours, 1.5 hours ON, 0.5 hours OFF cycle

Confirming resistance drift is recommended since this product has a tendency to have bigger resistance change than general flat chip over 70°C.
Please pay attention not to be applied ESD, it may cause of resistance change.

Actual Value (Out of Guarantee)

Test Items	Reference	Test Method
High Temperature Exposure	±8.0%	125°C, 1000 hours

Performance Characteristics

Parameter	Requirement Δ R ±(%+0.05Ω) Limit	Typical	Test Method
Resistance	Within specified tolerance	—	25°C
B Constant	Within specified tolerance	—	+25°C/+75°C
Resistance to Solder Heat	Other: ±1%, ±2%:1kΩ	Other: ±0.5%, ±1%:1kΩ	260°C ± 5°C, 10 seconds ± 1 second
Rapid Change of Temperature	±3.0%	±1.3%	-55°C (30 minutes),+125°C (30 minutes), 50 cycles
Moisture Resistance	±3.0%	±1.1%	40°C ± 2°C, 90 - 95% RH, 1000 hours
Load Life	±3.0%	±2.5%	80°C ± 3°C, DC5mW, 1000 hours
High Temperature Exposure	±3.0%	±1.6%	80°C, 1000 hours

Confirming resistance drift is recommended since this product has a tendency to have bigger resistance change than general flat chip over 80°C.
Please pay attention not to be applied ESD, it may cause of resistance change.

Actual Value (Out of Guarantee)

Test Items	Reference	Test Method
High Temperature Exposure	±7.0%	125°C, 1000 hours
ESD	500V	Human model, 100 pF 1.5 kΩ

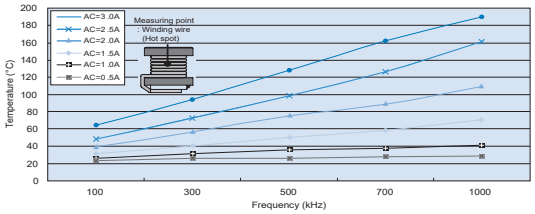
Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use. 11/28/17

Precautions for the Inductors

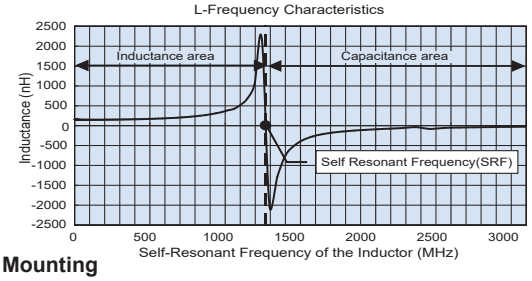
Refer to the precautions of common matters for all products in the beginning of this catalog.

Inductors in General

- Characteristics such as the inductance, Q value etc. are frequency dependent.
- The stress from resin coating and molding can result in change of inductance.
- Since the inductors use ceramic materials, chipping and crack can occur. Please be careful when handling. Excessive vibration and impact could destroy the parts.
- Keep magnetic tweezers and other magnets away from the inductors to avoid change of inductance caused by magnetization. Do not press the wire wound part of the chip inductor with sharp objects.
- The inductance could decrease according to magnetic saturation when the inductor is used exceeding the allowable current. There is also a possibility of disconnection and short-circuit or emitting smoke and ignition caused by the heat generation of the inductor.
- There is a risk of disconnection when excessive current (inrush current) is applied. Change of the characteristics may occur by the magnetization of the core when excessive current is applied to a DC circuit.
- When the parts are used at high-frequency, the heat generation will be larger and the part temperature will be higher compared with DC or low-frequency. This is caused by increasing iron loss and copper loss. Please be careful not to exceed the operating temperature rise by high frequency. Ex. LPC4045



- The electrical characteristics change from the variation of frequency of the parts. When the part is used above the frequency band of the SRF (self-resonant frequency), it will function as a capacitor. Please do not use the parts above the SRF.



Mounting

- Some inductors have magnetic polarities.
- The inductance and Q values of a non-magnetically-shielded inductor could change from magnetic coupling affected by other components, chassis, patterns, etc. When mounting in high density, check the characteristic in advance with the actual equipment. Additionally, take care of the positioning of the components since closely mounted inductors may cause magnetic coupling. Do not place large magnetic materials like audio speakers, etc. near the inductors.
- Do not expose the inductors to the heat radiation from other high temperature parts.

Reference

- For basic precautions, please refer to the Technical report of JEITA RCR-2501 Safety application guide for inductors for use in electronic equipment.

Terms and Definitions

Nominal Inductance

- Inductance that the inductor is designed to have and generally indicated on the body.

Q Value (Quality factor)

- A coefficient that shows the quality of the inductors. It is calculated from the following formula shown below.

$$Q = \frac{wL}{R}$$

w = Angular Frequency (w-2 π F)
L = Inductance
R = Resistance

Self-Resonant Frequency

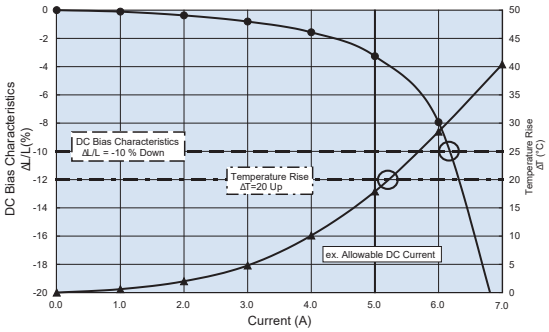
- Frequency that resonance occurs by the distribution capacity and inductance of the inductor.

DC Resistance Value

- Resistance value at DC.

Allowable DC Current

- Upper limit of the current which is set to assure the safe use of the inductor.
- It is defined as the smaller DC current value of either the DC superposition or the surface temperature rise characteristics.
- DC superposition characteristic is a phenomenon which occurs when the inductors, made with magnetic materials such as ferrite, have a large DC current applied. When this occurs, the inductance drops because of the magnetic saturation.
- The plot below shows the relationship between the DC superposition and the surface temperature rise..



Iron Loss

- Electrical energy that is lost when the wire wound magnetic material is magnetized by the applied AC. It is calculated by the sum of hysteretic loss and eddy-current loss.

Copper Loss

- Energy that is transformed into Joule heat by the resistance of the wound wire. The Copper loss increases in the high frequency band from the skin effect.

KOA SPEER ELECTRONICS, INC.

KQC

high current inductor

EU RoHS COMPLIANT

features

- Low DC resistance and high allowable DC current
- Low profile style 0.027 inches (0.7mm) typical
- Suitable for reflow soldering
- Products with lead-free terminations meet EU RoHS requirements

LPC4045, LPC4235, LPC4545

power chip inductor

KOA SPEER ELECTRONICS, INC.

EU RoHS COMPLIANT

features

- Low DC resistance and high allowable current are realized by the original construction and wiring technology
- Automatic surface mounting is applicable
- Excellent solderability and endurance environment
- Suitable for reflow soldering
- Products meet EU RoHS requirements
- AEC-Q200 Qualified

dimensions and construction

Allowable current is a DC Current which causes initial inductance to decrease by 10%. Or coil temperature to rise by 40°C, whichever is smaller
Operating Temperature Range: -40°C ~ +125°C LPC4235: Test Report +155°C is available
The operating temperature range of the coil (ambient temperature + self heating) must remain at +125°C or less

LPC4045

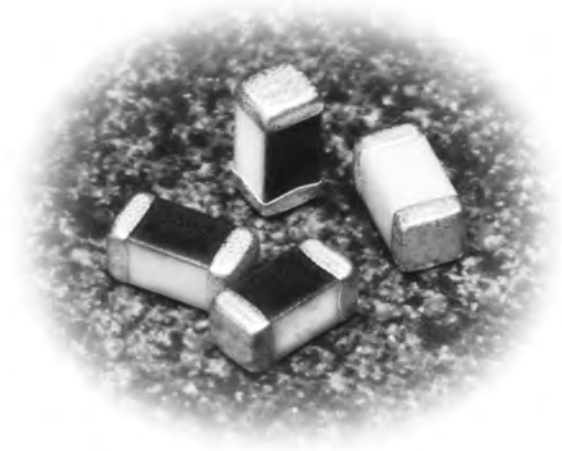
Performance Characteristics

Parameter	Performance Requirements ΔL/L		Test Method
	Limit	Typical	
High Temperature Exposure	±5%	±1.3%	LPC4045: +85°C ± 2°C, 500 hours LPC4235, LPC4545: +125°C ± 2°C, 1000 hours
Low Temperature Exposure	±5%	±1.3%	LPC4045: -40°C ± 2°C, 500 hours LPC4235, LPC4545: -40°C, 1000 hours
Moisture Exposure	±5%	±1.6%	LPC4045: +40°C, 90 - 95% RH, 500 hours LPC4235, LPC4545: +40°C ± 2°C, 90 - 95% RH, 1000 hours
Rapid Change of Temperature	±5%	±1.3%	LPC4045: -40°C (30 minutes)/+85°C (30 minutes), 100 cycles LPC4235, LPC4545: -40°C (30 minutes)/+125°C (30 minutes), 100 cycles

Surface Temperature Rise graphs and additional environmental applications can be found at www.koaspeer.com

EU RoHS COMPLIANT



features

- Monolithic structure provides high reliability in a wide temperature and humidity range
- High quality ceramic material and unique manufacturing process provides high Q at high frequency
- Nickel barrier with solder overcoat for excellent solderability
- Products with lead-free terminations meet EU RoHS requirements

Precautions for the Fusing Components

Refer to the precautions of common matters for all products in the beginning of this catalog.

Safety Standards

- KOA's fuse components comply with the following safety standards:

U.S.A.	UL (Underwriters Laboratories Inc.) UL248
CANADA	CSA (Canadian Standards Association) C22.2 No.248 c-UL (Underwriters Laboratories Inc.) UL248 *c-UL is equivalent to CSA in recognition
INTERNATIONAL	IEC (International Electrotechnical Commission) 60127-1, -4

Rated Current

- Specified amperage that conforms to safety standards, such as fusing time. This is not to be confused with the steady-state (stationary) current, which is calculated using the following equation:

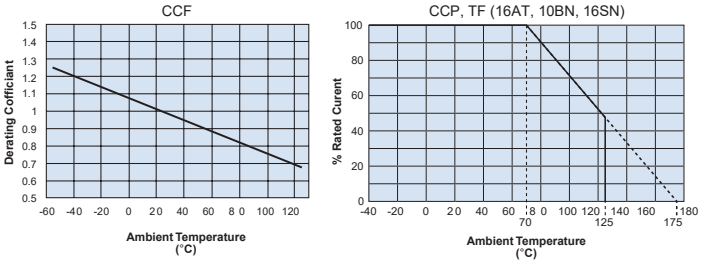
  Stationary Current ≤ Rated Current x Stationary Derating Coefficient x Ambient Temperature Derating

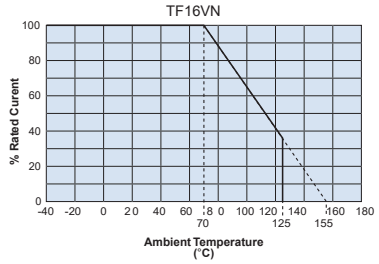
  The table below indicates deratings for each type of products.

Type	Stationary Derating Coefficient
CCF1N, CCF1F	0.7
TF16AT	0.75
TF10BN, TF16SN, TF16VN	1.0
CCP2B, CCP2E	1.0

Deratings for Ambient Temperatures

The following Deratings for Ambient Temperatures are required:





- Ambient Temperature Derating values are found on product datasheets.
- If the current waveform is a repeated pulse or AC waveform, the peak current shall be both the rated current and stationary current. Do not use the effective value of the current waveform.

Rated Voltage

- A rated voltage indicates the voltage that does not run through electrodes after the fuse blows. In case of exceeding the rated voltage, the circuit voltage should be applied at voltage not higher than the rated voltage because the current may run again or may break the elements.

Interrupting Capacity

- Maximum current and voltage that can be interrupted when an abnormal situation arises. Make sure beforehand that voltage and current at the time of abnormality occurring in the circuit are within the interrupting capacity.

Type	Fusing Current	Fusing Time
CCF1N (0.4~10)	Rated Current x 2 or Over	1 second
CCP2B	Rated Current x 2 or Over	1 second
CCP2E	Rated Current x 2.5 or Over	1 second
CCP2E H	Rated Current x 2 or Over	1 second
TF16SN	Rated Current x 2 or Over	1 second
TF10BN	Rated Current x 2 or Over	5 seconds
TF16AT	Rated Current x 2 or Over	5 seconds
TF16VN	Rated Current x 2.5 or Over	5 seconds
CCF1N (12, 15)	Rated Current x 2 or Over	60s second
CCF1F	Rated Current x 2 or Over	120 seconds

Fusing Current

- Minimum current needed to break fusing element. Refer to the following list to quickly interrupt if an abnormal current occurred in the circuit:

  If fusing time is within 1 second or greater, the variance in the fusing time is largely affected by the surroundings (temperature, mounting pad dimensions, substrate material, etc.). Verification should be made with an actual circuit.

Anti-Surge Characteristics

There are limits to applications of transient overcurrents (inrush current, reversible current at motor-lock, etc.) that occur in circuits. It is necessary to select proper products that withstand such overcurrents without fusing. Select proper fusing components considering the following conditions:

- The transient phenomenon varies with the ambient temperature, charging/discharging conditions of capacitors, etc. Check the current waveform under such conditions that the stationary current also becomes the peak current. If the circuit has components highly dependent on temperature, such as thermistors, etc., please do a check under these conditions.
- For a peak current observation, shorten the sampling time of an oscilloscope to verify the maximum value of the wave-form of the surge current.
- We recommend the current measurement using current probe. If current measuring is performed by measuring voltages of shunt resistors, etc., use the lowest possible resistances.

Operation Check

- Before you decide which fuse product you use, please mount the selected fuse on actual device and confirm that rush current and surge current have enough margin and that the product has performance that enables it to interrupt the abnormal current quickly.

Soldering

- This product is suitable both for reflow-soldering and for flowsoldering, but excessive heat may cause an open-circuit and change its characteristics.
- The part shall be soldered at the maximum temperature of 260°C or less.
- If a soldering iron is used, it shall be at 350°C or less and should be soldered in a short time. Further, pay attention that the products are not touched directly by the top of the iron. It may cause disconnection or characteristic change.

Placement

- If resin coating, potting or encapsulation molding is used, please confirm reliability. Small contractile stress at resin stiffening time can cause cracks, fuse shear line, or resistance change. Also, the generated heat may not be able to dissipate properly, causing a change in fusing characteristics.
- The fusing characteristics may change when there are components that generate heat around the fuses. Keep fuses away from those parts.

Storage

- Avoid storing components under the condition of high temperature/high humidity (40°C/70%RH or more) which may deteriorate solderability.
- Also avoid direct sun light which may deteriorate solderability and induce changes in taping strength.se parts.

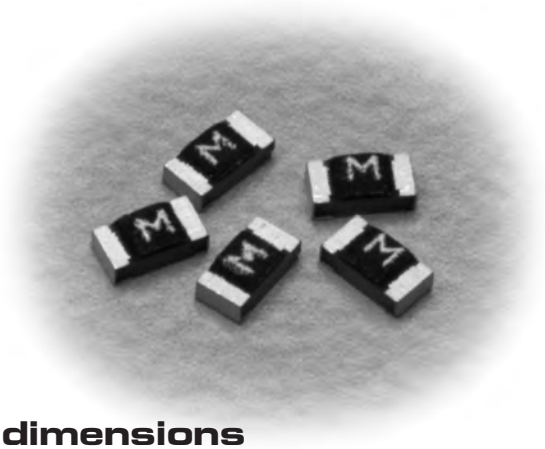
Parts Selection

- If you have any questions about fuse selection, please do not hesitate contacting us.

Reference

- For basic precautions, refer to JEITA technical report "JEITA RCR-4800 Safety application guide on fuse for use in electronic and electrical equipment".

EU RoHS COMPLIANT



features

- Small, lightweight design
- Special manufacturing method stabilizing fusing characteristics and occupying less area
- Low power consumption and less voltage drop due to low internal resistance
- Suitable for overcurrent protection of circuit block in electronic devices
- Suitable for flow and reflow soldering
- Products with lead-free terminations meet EU RoHS and China RoHS requirements

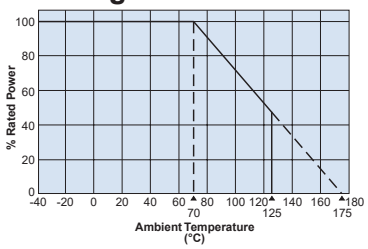
environmental applications

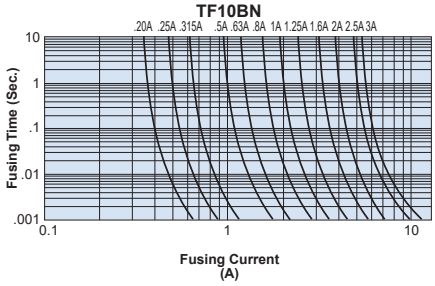
Derating Curve

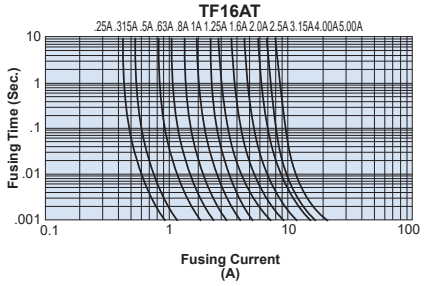


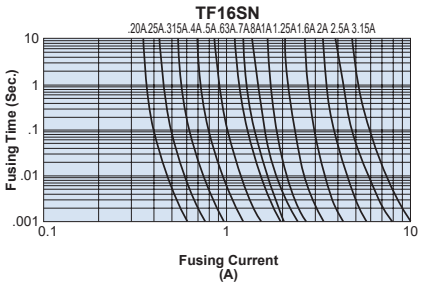
Stationary Current: Regard the peak of stationary current waveform as stationary current value when the stationary current is repeated pulse.

Temperature Derating: Rated current needs to be derated if used at an ambient temperature 70℃ or above. Refer to the derating coefficient on the left figure.

Fusing Characteristics







Performance Characteristics

Parameter	Requirement		Test Method
	Limit	Typical	
Fusing Characteristics	Within 1 second (16SN) Within 5 seconds (10BN, 16AT)	—	200% of rated voltage shall be carried (@25°C)
Bending Test	No mechanical damages	—	Distance between holding points: 90mm, Bending: 3mm, 1 time (BN, AT), 2mm, 1 time (SN)
Resistance to Solder Heat	±10%	±4.5% (16SN) ±5% (10BN, 16AT)	260°C ± 5°C, 10 seconds ± 0.5^{+0} second
Solderability	95% coverage minimum	—	245°C ± 3°C, 3 seconds ± 0.5 second
Load Life	±10%	±4.5%(16SN) ±5% (10BN, 16AT)	70°C ± 2°C, 1000 hours, rated current x 100%, 1.5 hr ON, 0.5 hr OFF cycle
Load Life Moisture	±10%	±3% (10BN) ±4.5% (16SN), 5% (16AT)	40°C ± 2°C, 90 - 95% RH, 1000 hours, rated current x 100% (10BN, 16SN), x 75% (16AT), 1.5 hr ON, 0.5 hr OFF cycle
Rapid Change of Temperature	±10%	±4% (16SN) ±5% (10BN, 16AT)	16SN: -40°C ± 2°C (30 minutes), 10BN, 16AT: -55°C ± 2°C, +125°C (30 minutes), 10 cycles
Resistance to Solvent	No evidence of damages to protective coating and marking	—	Conforming to MIL-STD-202F
Residual Resistance	10kΩ and more	—	Measure DC resistance after fusing

 12/19/17

KOA SPEER ELECTRONICS, INC.

TF16VN

chip current fuses for automotive

features

- Small and light chip current fuses for the secondary circuit
- Temperature cycle (-55°C ~ 125°C), 1000 cycle
- Original construction and manufacturing method stabilize fusing characteristics
- Suitable for overcurrent protection of circuit block in small electronic devices
- Suitable for reflow solderings
- Products meet EU RoHS requirements
- AEC-Q200 Qualified

environmental applications

Derating Curve

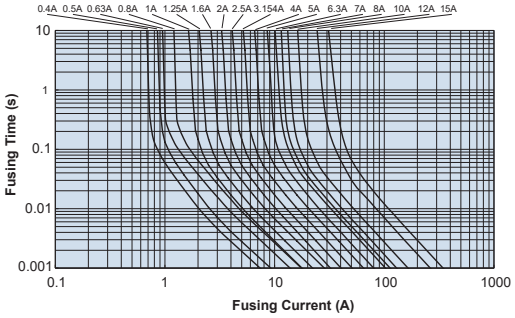
Stationary Current: Regard the peak of stationary current waveform as stationary current value when the stationary current is repeated pulse. Normal derating of this product should be 0.7max. as standards.

Deratings by ambient temperatures. When using the products at the temperatures other than normal temperature (25°C ± 5°), temperature adjustment will be required. Please refer the derating coefficient as shown in the figure.

Fusing Characteristics



Performance Characteristics

Parameter	Requirements		Test Method
	Limit	Typical	
Fusing Characteristics	Within specified time. Insulation resistance shall not be less than 0.1MΩ	—	Fusing time measured under rated current x 200%) (at 25°C)
Surface Temperature Rise	Maximum temperature rise 75°C and not fusing (all the rating)	—	Surface temperature should be measured by 1.00/N
Bending Test	No mechanical damage	—	Distance between holding points 90mm, bent by 3mm at rate of 1mm/second
Resistance to Soldering Heat	ΔR±10%	±3%	260°C ± 5°C, 10 seconds ± 0.5 seconds
Solderability	95% coverage minimum	—	235°C ± 5°C, 3 seconds ± 0.5 seconds
Load Life	ΔR±10%	±5%	70°C ± 2°C, 1000 hours, rated current x 70%, 1.5 hr ON, 0.5 hr OFF cycle
Load Life Moisture	ΔR±10%	±5%	40°C ± 2°C, 90 - 95% RH, 1000 hours, rated current x 70%, 1.5 hr ON, 0.5 hr OFF cycle
Rapid Change of Temperature	ΔR±10%	±5%	-55°C (30 minutes), +125°C (30 minutes), 100 cycles
Sulfuration Test	ΔR±5%	—	Soaked in industrial oil with 3.5% sulfur concentration, 105°C±3°C, 500 hours

Precautions for the Varistors

The reliability of the metal oxide varistors are dependant on the ways of their use and could lead to accidents so please be aware.

Selection and Protection

- It is recommended that the steady-state circuit voltage which remains at 80% or less of the max. allowable circuit voltage. Exceeding the specification will cause deterioration, short-circuits, etc.
- Select proper parts according to the surge energy and the number of the impressions if the varistors are used to absorb the surge for an inductive loading.
- The rated surge endurance is defined in terms of shock wave current waveform (starting up 8μs/wave-tail length 20μs). The waveform in a practical use may be different from the test conditions, in which case, select the proper parts from the Voltage-Current Curves in the varistor catalog.
- Insert fuses or thermal fuses in series with varistors if the size of the surge power cannot be estimated, in order to prevent varistors from bursting due to an excessive surge over the rating.
- Give consideration on the layout to combustible materials and to take measurements on the circuits (fuses or thermal fuses) since there may be smoking or flaming if the varistor short-circuits due to an excessive surge over the rating.
- Upon mold sealing, fully confirm the reliability and use the resin which has small contractile stress at stiffening since the protection coat may peel off, cracks may occur at the solder connection, and the characteristics of the varistor may change.
- Perform the withstand voltage test and the insulation resistance test with the varistors removed from the circuit since the test voltage may exceed the varistor voltage.

Failure Mode

- The varistors will deteriorate and have a possibility of short-circuiting if they are exposed to an excessive surge over the specification.

  A short-circuit occurs when the load factor rises against the circuit voltage due to the deterioration of a varistor voltage. Then the Joule heat is generated by the leakage current and a thermal runaway occurs. The varistors may burst and become open if a commercial power supply of 200V r.m.s. is connected to a varistor for 100V r.m.s. (270V/1mA).

Chip Varistors for Surface Mount

- Please perform damp-proofing on the surface of the varistors prior to the use when installing in a high-humidity and high-temperature environment.

Reference

- For basic precautions, please refer to the technical report of JEITA EMAJ-R039 Safety

Terms and Definitions

Maximum Allowable Circuit Voltage

- The maximum commercial frequency sinusoidal voltage effective value or maximum DC voltage which can be applied continuously.

Maximum Energy (E)

- The maximum energy within the varistor voltage change rate of ±10% when a single impulse of 2ms is applied. (NV73 2E, 2J, 2L are applied 100 times.)

Maximum Peak Current (I_P)

- The maximum peak current within the varistor voltage change rate of ±10%, when a single standard impulse of 8/20μs is applied in two times with an interval of 5 min. (NV73 2E, 2J, 2L are 100 times.)

Operating Temperature (T_{opt})

- The allowable ambient temperature range while the device is operating.

Storage Temperature (T_{stg})

- The temperature range in which the elements do not deteriorate.

Varistor Voltage (V_C)

- The terminal voltages on both ends of the varistor when the specified current is applied.

Clamping Voltage (V_P)

- The peak value of the voltage between two terminals of the varistor when the specified standard waveform impulse current (8/20μs) is applied.

Recommended value of varistor voltage for the power supply voltage

Voltage of Power Line	Varistor Voltage
3.3V d.c.	8.2V
5V d.c.	8.2V, 12V
12V d.c.	24V, 27V
24V d.c.	47V, 56V
48V d.c.	82V, 100V, 120V

KOA SPEER ELECTRONICS, INC.

NV73

metal oxide varistor

EU RoHS COMPLIANT

features

- Multilayer structure
- High surge current
- Protector against static electricity, switching and incoming surges
- Suitable for both flow and reflow soldering
- Products with lead-free terminations meet EU RoHS requirements. Pb located in glass material, electrode and varistor element is exempt per Annex 1, exemption 5 of EU directive 2005/95/EC

Maximum allowable voltage - the maximum sinusoidal RMS voltage or maximum DC voltage which can be applied continuously
E: Maximum energy - the maximum energy within the varistor voltage change of ±10% when a single impulse of 2m sec. is applied
Ip: Maximum peak current - the maximum peak current within the varistor voltage change of ±10% when a single standard impulseof 8/20μ sec. is applied two times with an interval of 5 min.
Topt: Operating temperature - Ambient temperature range when the device is operating
Tstg: Storage temperature - Temperature range without causing the device any failure

environmental applications

Performance Characteristics

Parameter	Requirement Δ V±%	Test Method
Varistor Voltage	Within specified tolerance	Voltage between terminals when 1mA is flowed
Solderability	95% coverage minimum	230°C ± 5°C, 4 seconds ± 1 second; 235°C ± 5°C, 4 seconds ± 1 second***
Resistance to Solder Heat	±10%	260°C ± 5°C, 10 seconds ± 0.5 second*; 270°C ± 5°C, 3 seconds ± 0.5 second**; 260°C ± 5°C, 4 seconds ± 1 second***
Rapid Change of Temperature	±10%	-40°C (30 minutes), +125°C (30 minutes), 30 cycles; 5 cycles***
Maximum Peak Current	±10%	A single standard impulse of 8/20μ seconds, positive/negative applied once each; A single standard impulse of 8/20μ seconds, 100 pulse, 30 second interval***
Maximum Energy	±10%	A single standard impulse of 10/1000μs, once*; A single standard impulse of 2ms, once**; A single standard impulse of 10/1000μs, 100pluse, 90 second interval***
High Temperature Life with d.c. Bias	±10%	85°C ± 5°C, 1000h, Load: Maximum allowable circuit voltage (d.c.); 125°C ± 5°C, 1000h, Load: Maximum allowable circuit voltage (d.c.)***
Low Temperature Life with d.c. Bias***	±10%	-50°C ± 5°C, 1000h, Load: Maximum allowable circuit voltage (d.c.)
High Temperature Life with a.c. Bias**	±10%	85°C ± 5°C, 1000h, Load: Maximum allowable circuit voltage ($Va.c._{r.m.s.}$)
High Temperature & High Humidity Life with d.c. Bias	±10%	40°C ± 5°C, 95% RH, 500h, Load: Maximum allowable voltage (d.c.)
Capacitance*	Typical	1kHz: Others, 1MHz: Varistor voltage 120V
High Temperature Storage Life	±10%	125°C ± 5°C, 1000h; 150°C ± 5°C, 1000h***
Low Temperature Storage Life	±10%	-40°C ± 5°C, 1000h; -50°C ± 5°C, 1000h***

multilayer type metal oxide varistor (automotive)

EU RoHS COMPLIANT

features

- SMD type metal oxide varistors
- Ideal for countermeasures against ESD (Conforming to IEC61000-4-2)
- High maximum energy type
- Low leakage current
- High resistance to cyclic temperature stress
- Suitable for both flow and reflow soldering
- Products with lead-free terminations meet EU RoHS requirements. Pb located in glass material, electrode and varistor element is exempt per Annex 1, exemption 5 of EU directive 2005/95/EC.
- AEC-Q200 Qualified

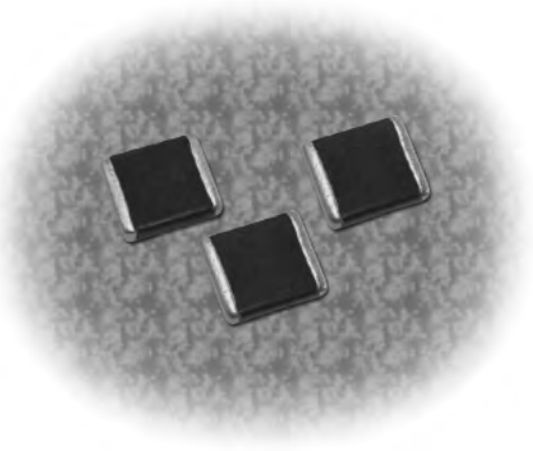
KOA SPEER ELECTRONICS, INC.

NV73DS

multilayer type metal oxide varistor (load dump surge)

EU RoHS COMPLIANT



features

- Symmetrical non-linearity V-I characteristics absorb positive and negative surge
- Suitable for protection of automotive applications from load dump surge on electronic components
- Meets JASO load dump surge test requirements
- Operating temperatures up to 125°C
- High resistance to cyclic temperature stress
- Suitable for both flow and reflow solderings
- Products meet EU RoHS requirements
- AEC-Q200 Qualified

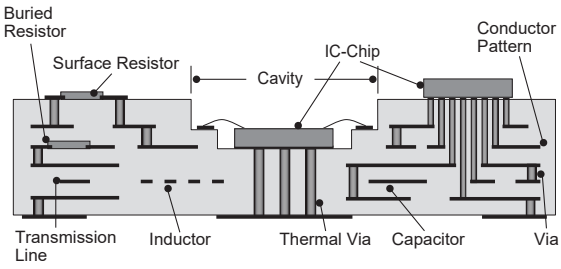
EU RoHS COMPLIANT

construction



ordering information

New Part #	KLC	AB1
	Type	KOA Ref. Number

features

- KOA's substrates are suitable for bare chip mounting, as the thermal expansion cofficient is close to silicon's one and outstanding dimensional accuracy and flatness.
- Thanks to our low dielectric ceramics and low resistive conductors, the substrates excel in the high frequency characteristics
- Minituarization and high integration are possible because of multilayer wiring, multi-cavity structure and the surface/buried printing resistors possibilities
- Special shapes of substrate and cavity such as circle shape, polygonal shape and concave or convex shape are available
- Thermal vias under bare chips can be implemented to improve the thermal conductivity of the substrate
- The substrates are outstanding in heat resistance and humidity resistance. There will be no outgas occurrence from the ceramics.
- Products meet EU RoHS requirements

what is LTCC ?

LTCC stands for Low Temperature Co-fired Ceramics.

KOA's LTCC are multilayer ceramic substrates. This technology permits to use low resistive material as conductor patterns due to the lower temperature needed during firing process compared to general ceramic firing process. This is achieved by adding glass to alumina. KOA uses Silver based paste (Ag) to create the electrical structures in and on the ceramics layers. To be noted, that top and bottom layers patterns can be platted using various processes.

Thanks to these materials, low loss electrical performance can be achieved as well as high dimensional accuracy.

KOA's LTCC provides clear advantages for system downsizing by forming surface resistors, inner resistors, and transmission lines on/ in the substrate. In addition, our thermal expansion coefficient is close to silicon's one, enhancing the reliability of mounted bare chip.

Furthermore, cavity structures can be formed, making possible the creation of low profile packages.

environmental applications

Characteristics of Substrate Material

Parameter	Characteristics
Bending Strength (MPa)	250
Thermal Expansion Coefficient (x10^{-6}/K)	5.5
Thermal Conductivity (W/m • K)	3
Insulation Resistance (Ω • cm)	>10^{13}
Dielectric Constant at 1GHz	6.6
Dielectric Loss at 1GHz	<0.004
Resistivity of Buried Conductor (μΩ • cm)	Ag 2.5
Density (g/cm^3)	2.8
Surface Roughness Ra (μm)	<0.4
Withstanding Voltage (kV/mm)	>15
Layer Thickness (μm/Layer)	80, 100, 125 Standard

Symbol	Parameter	Design Value
A	Line Width	0.06mm Min.
B	Line to Line Spacing	0.06mm Min.
C	Via Diameter	0.1mm, 0.15mm, 0.2mm
D	Via Pad Diameter	Via diameter +0.05mm Min.
E	Via to Via Spacing	0.2mm Min.
F	Via pad to Line Spacing	0.125mm Min.
G	Part Edge to Conductor Spacing	0.2mm Min.
H	Part Edge to Via Spacing	0.3mm Min.
J1, J2	Cavity Width	0.6mm Min.
K1, K2	Cavity Depth	0.1mm Min.
L	Wall Width of Cavity	0.5mm Min.
M	Shelf Width in the Cavity	0.5mm Min.

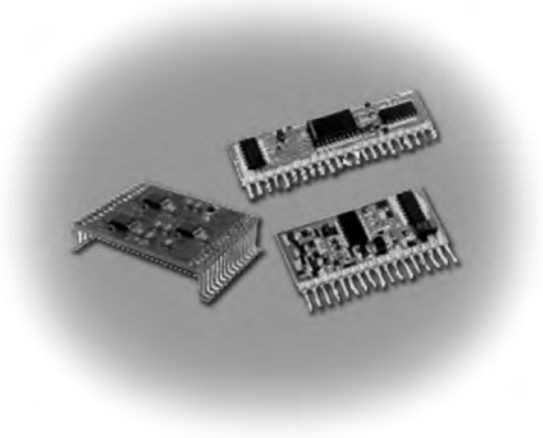
KOA SPEER ELECTRONICS, INC.

KA
hybrid IC

EU RoHS COMPLIANT



features

- Adjustment processes are decreased by function and ratio trimmings
- High density mounting by bonding (COB)
- Various types of package are available
- High reliability achieved by KOAs original thick film technology
- Thick film printed circuit substrate applies the non-noble metal paste (conductive paste and resistive paste) and receives the many total inquires including material selecting, pattern designing and mass production

features

- SMD (Hybrid IC)
- Plural semiconductors in one package offers downsized system with high performance and standardization
- Wiring space saving by multilayer fine patterns on build-up substrate. No signal delay by shortened wiring distance
- High precision modules by function trimming
- Less mounting problem because of the decreasing number of the terminals

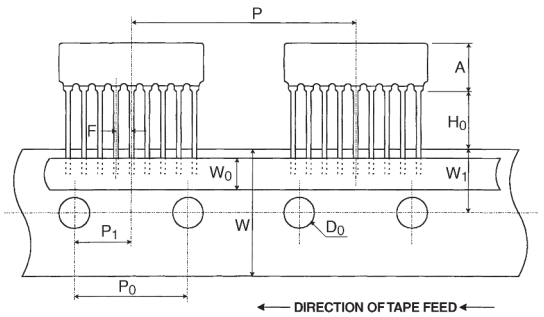
SIP resistor network taping—TBA style

For KOA type RKL & RKC networks with 4 to 9 pins

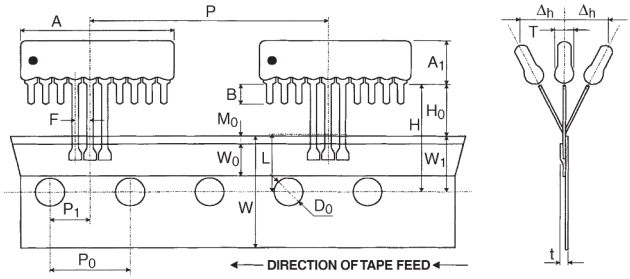


Leaded Resistors (TBA Style)

Type	Dimensions (mm)
A	RKL: 5.0 max.-RKC: 6.5 max.
P	25.4 ± 1.0
P_0	12.7 ± 0.3
P_1	6.35 ± 0.5
F	2.54 ± 0.3
W	18.0 ± 0.5
W_0	6.0 ± 0.5
W_1	9.0 ± 0.5
H_0	7.0 ± 0.5
D_0	4.0 ± 0.3

SIP resistor network taping—TUA style

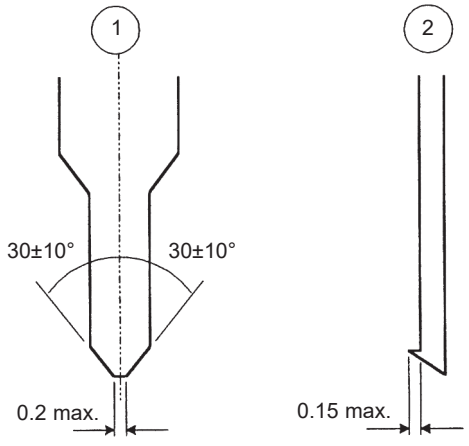
For KOA type RKL & RKC 10-pin networks



Leaded Resistors (TUA Style)

Type	Dimensions (mm)
A	25.40 max.
T	2.5 max.
A_1	5.0 max.
B	3 ± 0.5
P	RKL: 25.4, RKC: 38.1±1.0
P_0	12.7 ± 0.3
P_1	6.35 ± 0.7
Δh	0 ± 2.0
W	18 ± 0.5
W_0	6 ± 0.5
W_1	9 ± 0.5
H	19.5 ± 0.5
H_0	10.5 ± 0.5
D_0	4 ± 0.3
t	0.7 ± 0.2
L	11 max.
M_0	1.0 ± 1.0

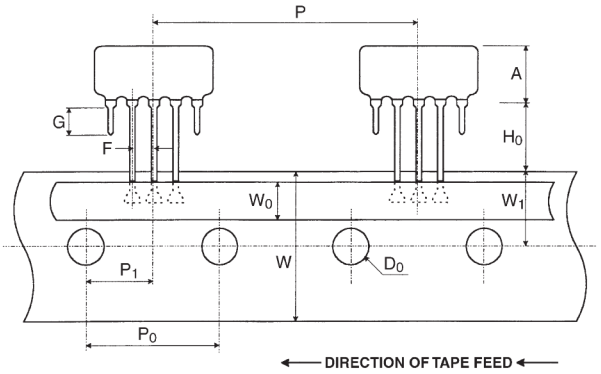
Application: Universal radial lead component insertion machine



*21 Holes Length = 254 ± 1mm

SIP resistor network taping—TPA style

For KOA type RKL & RKC networks with 4 to 9 pins



Leaded Resistors (TPA style)

Type	Dimensions (mm)
A	RKL: 5.0 max.-RKC: 6.5 max.
P	25.4 ± 1.0
P_0	12.7 ± 0.3
P_1	6.35 ± 0.5
F	2.54 ± 0.3
W	18.0 ± 0.5
W_0	6.0 ± 0.5
W_1	9.0 ± 0.5
H_0	10.5 ± 0.5/1.0
D_0	4.0 ± 0.3
G	3.0 ± 0.5

SIP resistor network taping—TPA style

For KOA TPA style taping

Terms & Definitions

Rated Power:
The maximum value of power which can be continuously loaded to a resistor at a rated ambient temperature.

Rated Voltage:
The maximum value of D.C. voltage or A.C. voltage (rms) capable of being applied continuously to a resistor at the rated ambient temperature. Rated voltage shall be calculated from the following formula:

$$\text{Rated Voltage(V)} = \sqrt{\text{Rated Power(W)} \times \text{Nominal Resistance Value (ohm)}}$$

However, it shall not exceed the maximum working voltage.

Critical Resistance Value:
The maximum nominal resistance value at which the rated power can be loaded without exceeding the maximum working voltage. The rated voltage is equal to the maximum working voltage in the critical resistance value.

Maximum Working Value:
The maximum value of D.C. voltage or A.C. voltage (rms) capable of being applied continuously to a resistor or a resistor element. However, the maximum value of the applicable voltage is the rated voltage at the critical resistance value or lower.

Maximum Overload Voltage:
The maximum value of voltage capable of being applied to a resistor for five seconds in the short-time overload test. Typically the applied voltage in the short-time overload test shall be 2.5 times larger than the rated voltage. However, it shall not exceed the maximum overload voltage.

Dielectric Withstanding Voltage:
A.C. voltage (rms) that can be applied to a designated spot between the electrode and the outer coating for one minute in the dielectric withstanding voltage test.

Rated Ambient Temperature:
The maximum ambient temperature at which a resistor is capable of being used continuously with the prescribed rated power. The rated ambient temperature refers to the temperature around the resistor inside the equipment, not to the air temperature outside the equipment.

Derating Curve:
The curve that expresses the relation between ambient temperature and the maximum value of continuously loadable power at its temperature, which is generally expressed in percentage.

Temperature Coefficient of Resistance (T.C.R.):
The rate of change in resistance value per 1°C in the prescribed temperature within the range of resistor operating temperature shall be expressed in the following formula:

$$\text{T.C.R. (ppm/°C)} = \frac{R-R_0}{R_0} \times \frac{1}{T-T_0} \times 10^6$$

Where: R: Measured Resistance at T°C
R_0: Measured Resistance at T_0°C
T: Measured Test Temperature (°C)
T_0: Measured Base Temperature (°C)

KQC0603TK001Kit
Lead-free, 12 values 20 pcs each

High Current Chip Inductors

LPC4045AK001kit
Lead-free, 19 values 25 pcs each

LPC4235AK001kit
Lead-free, 17 values 25 pcs each

NOTE: Reference product data pages for available values.

surface mount resistors

NEW Anti-Sulfur Precision Flat Chip Resistors

RK73H1ERT-Kit1 (0402 chip size)
122 values, 100 pcs each

RK73H1JRT-Kit1 (0603 chip size)
122 values, 100 pcs each

Precision Flat Chip Resistors

RK73H1FTK001Kit (01005 chip size)
38 values, Lead-free, 25 pcs each (10R0 ~ 620K = ±1%)

RK73H1HTK001Kit (0201 chip size)
217 values, Lead-free, 50 pcs each (0, 10R0 ~ 1M00 = ±1%)

RK73H1ETK001Kit (0402 chip size)
122 values, Lead-free, 50 pcs each (0, 10R0 ~ 1M00 = ±1%) E-24

RK73H1JTK001Kit (0603 chip size)
122 values, Lead-free, 50 pcs each (0, 10R0 ~ 1M00 = ±1%) E-24

RK73H2ATK001Kit (0805 chip size)
122 values, Lead-free, 50 pcs each (0, 10R0 ~ 1M00 = ±1%)

RK73H2BTK001Kit (1206 chip size)
122 values, Lead-free, 50 pcs each (0, 10R0 ~ 1M00 = ±1%)

General Purpose Flat Chip Resistors

RK73B1FTK001Kit (01005 chip size)
51 values, Lead-free, 25 pcs each (0, 10 ~ 1M = ±5%)

RK73B1HTK001Kit (0201 chip size)
139 values, Lead-free, 50 pcs each (0, 2R2 ~ 2M2 = ±5%)

surface mount resistors (continued)

High Voltage Flat Chip Resistors

HV73TK001Kit (0603, 0805, 1206, 2010 chip sizes)
156 values, Lead-free, 25 pcs each (10k ~ 10M = +1%)

Varistors

NV73TK001Kit (0201, 0402, 0603, 0805, 1206, 1210, 1812, 2220 chip sizes)
Lead-free, 122 values, 10 pcs each size

NV73DLTK001Kit (0603, 0805, 1206 chip sizes)
17 values, Lead-free, 10 pcs each size

Surge Current Flat Chip Resistors

SG73TK001Kit (0603, 0805, 1206, 1210, 2010, 2512 chip sizes)
204 values, ±10%, Lead-free, 25 pcs each

SG73STK001Kit (0603, 0805, 1206, 1210 chip sizes)
101 values, ±1%, Lead-free, 25 pcs each

SG73PTK001Kit (0603, 0805, 1206, 1210 chip sizes)
97 values, ±1%, Lead-free, 25 pcs each

Wide Terminal Flat Chip Resistors

WK73TK001Kit (0612, 1020, 1218 & 1225 chip sizes)
79 values, Lead-free, 25 pcs each (±1%, ±5%)

WU73TK001Kit (0612 chip sizes)
17 values, 20 pcs each (±1%)

NOTE: Reference product data pages for available values.

surface mount resistors (continued)

Ultra Precision Flat Chip Resistor

RN731ETK016Kit25 (0402 chip size)
193 values, Lead-free, 25 pcs each (±0.1%, 25ppm°C)

RN731JTK016Kit25 (0603 chip size)
85 values, Lead-free, 25 pcs each (±0.1%, 25ppm°C)

RN732ATK016Kit25 (0805 chip size)
289 values, Lead-free, 25 pcs each (±0.1%, 25ppm°C)

RN732BTK016Kit25 (1206 chip size)
289 values, Lead-free, 25 pcs each (±0.1%, 25ppm°C)

RN73H1ET-Kit (0402 chip size)
49 values, Lead-free, 50 pcs each (±0.1%, 25ppm°C)

RN73H1JT-Kit (0603 chip size)
67 values, Lead-free, 50 pcs each (±0.1%, 25ppm°C)

RN73H2AT-Kit (0805 chip size)
73 values, Lead-free, 50 pcs each (±0.1%, 25ppm°C)

Circuit Protection - Thermal Sensors

NT73TK001Kit (0603, 0805, 1206 chip sizes)
Lead-free, 53 values (1J, 2A, 2B), 10 pcs each size

Circuit Protection - Fuses

CCFTK001Kit (2410 chip size)
18 values, Lead-free, 20 pcs each

CCPTK001Kit (1206, 1210 chip sizes)
35 values, Lead-free, 20 pcs each

FuseKit-TF10BN (0402 chip size)
12 values, Lead-free, 100 pcs each

FuseKit-TF16SN (0603 chip size)
14 values, Lead-free, 100 pcs each

FuseKit-TF16AT (0603 chip size)
13 values, Lead-free, 100 pcs each

NOTE: Reference product data pages for available values.

current sense resistors

Surface Mount Molded

SLW07TK001Kit (2010, 1W size)
27 values, 20 pcs each (±1%).

SLW1TK001Kit (2512, 1.5W size)
25 values, 20 pcs each (±0.5%).

SL1TK001Kit (2512, 1W size)
58 values, 20 pcs each (±1%).

SL2TK001Kit (4528, 2W size)
45 values, 20 pcs each (±1%).

SL3TK001Kit (4528, 3W size)
33 values, 20 pcs each (±1%).

SLN3TK001Kit (4528, 3W size)
32 values, 20 pcs each (±0.5%).

SLN5TK001Kit (4528, 5W size)
21 values, 10 pcs each (±0.5%).

TSL1TK001Kit (2512, 1W size)
33 values, Lead-free, 20 pcs each (±1%).

PowerShuntTK001Kit (PSB, PSE, PSI)
9 values, Lead-free, 25 pcs each.

Metal Plate

TLR2ATK001Kit (0805 chip size)
9 values, complete range, 20 pcs each (±1%).

TLR2BWD-Kit (1206 chip size)
18 values, 15 pcs each (±1%).

TLR2HWD-Kit (2010 chip size)
10 values, 15 pcs each (±1%).

TLR3APD-Kit (2512 chip size)
10 values, 20 pcs each (±1%).

TLRDK001Kit (1206, 1210, 2512 chip sizes)
40 values, Lead-free, complete range, 20 pcs each (±1%).

Chip Resistors

UR73TK001Kit (0402, 0603, 0805, 1206, 2512 chip sizes)
144 values, Lead-free, 20 pcs each (±1%).

UR73VTK001Kit (1206 chip sizes)
8 values, 20 pcs each (±1%).

Thick Film

SR731HTK001Kit (0201 chip size)
29 values, Lead-free, 50 pcs each (R47 ~ 10R0, ±1%, ±5%)

SR731ETK001Kit (0402 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 1R00, ±1%)

SR731JTK001Kit (0603 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 10R0, ±1%)

SR732ATK001Kit (0805 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 10R0, ±1%)

SR732BTK001Kit (1206 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 10R0, ±1%)

SR732ETK001Kit (1210 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 10R0, ±1%)

SR732HTK001Kit (2010 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 10R0, ±1%)

SR733ATK001Kit (2512 chip size)
49 values, Lead-free, 50 pcs each (R100 ~ 10R0, ±1%)

world class quality

Successful companies recognize the value in selecting suppliers committed to total quality. KOA Speer has long embraced the principals of continuous improvement to attain new performance levels in every aspect of customer support. Our manufacturing programs redefine industry standards with defect levels measured in parts per billion. This organization-wide focus on quality resulted in our receiving ISO 9001:2008 certification. In addition, our quality program has recently received the more stringent TS-16949 certification required to be a tier one supplier in the automotive industry.

customer programs

KOA Speer can play a vital role in helping your operation achieve maximum efficiency. Our sales/customer service representatives will meet with your design, production and purchasing teams to create a program that makes sense for your organization. Among the areas we regularly address are data entry and access through customized EDI, and inventory management through dock-to-stock and JIT programs. Our willingness to not only develop these programs but to execute them as promised, makes KOA Speer a dependable partner worth integrating into your operation.

responsive service

Providing products and answers when you need them is a fundamental policy at KOA Speer. Our 185,000 square foot warehouse features an automated material handling system based upon bar coding and radio frequency data communication (RFDC) to maintain an inventory of billions of components, while shipping millions of components per day. Standard product availability, the industry's most extensive electronic data interchange (EDI) program and a willingness to inventory to customer requirements, make KOA Speer JIT delivery an integral part of our customer's efforts at improving efficiency.
