

KOA SPEER ELECTRONICS, INC.

OF RESISTORS SHIPPED EVERY MONTH

With 99% + On-Time Delivery... You Can Count on KOA Speer

At KOA Speer, we ship Billions of resistors every month! And, despite that volume, our 99%+ on-time performance and service levels are off the charts. We offer a diverse and expanding family of surface mount and leaded resistors, all backed by our Quality 1st mandate to deliver unmatched service and product quality. Let KOA Speer help take your design from **Concept to Reality!**

Quality 1st

You expect product quality from any component that makes it into one of your designs. But in today's competitive global marketplace, there's more to the quality equation. At KOA Speer, our Quality 1st initiative reinforces our organization wide focus on serving you at the highest possible level.

ISO 9001:2015

Our commitment to quality in everything we do is paying off... as we consistently receive customer quality and service awards. We're the industry's most recognized and awarded supplier for achieving the highest product quality, on-time delivery and responsive customer service.

KOA SPEER...

More Than Just Resistors

Surface Mount Resistors

General • Precision
Wide Terminal • Anti-Surge
High Voltage • High Temperature
Anti-Sulfuration • Molded Heat Cycles
Fusing • Cylindrical • Networks

Low Resistance Current Sense/Shunts

Metal Plate • Thick Film • Power Shunt
Molded • Wide Terminal

Leaded Resistors

General • Precision • High Voltage
Power Type • Fusing Type

Thermistors/ Thermal Sensors

Platinum Thin Film (SMD)
Platinum Thin Film (Leaded)
Platinum Thin Film (Custom)
Linear P.T.C. (SMD)

Inductors

Circuit Protection

Fuses • Ceramic Case
Flat Chip • Varistors

LTCC Substrates & Other Products

Hybrid IC • LTCC Substrates
Custom Module • Test Point Chip

RoHS
COMPLIANT

Surface Mount Resistors		Caution & Terms	General Precautions	16-17
			Introduction of the Derating Curve	18-19
			Resistors	20
	General	RK73B	General purpose 2%, 5% tolerance thick film chip resistors	21-22
		RK73H	Precision 0.5%, 1% tolerance thick film chip resistors	23-24
		RK73Z	Zero ohm jumper chip resistors	25-26
	RoHS Exemption Free	NEW RK73-FT	RoHS exemption free thick film chip resistors	27-29
	Precision	RK73G	50 ppm/°C thick film chip resistors	30-31
		RN73H	High reliability thin film chip resistors (for Automotive)	32-33
		RN73R	High reliability thin film chip resistors	34-35
		RS73	25 ppm/°C thick film chip resistors	36-37
	Wide Terminal	WG73	Anti-surge wide-terminal thick film chip resistors	38-39
		WK73R	Wide-terminal thick film chip resistors	40-42
		WK73S	Wide-terminal current sense thick film chip resistors	143-144
		WN73H	Wide-terminal thin film chip resistors	43-44
		WU73	75 ppm/°C wide-terminal current sense thick film chip resistors	145-146
	Anti Surge	SG73	Extremely high pulse thick film chip resistors	45-46
		SG73G	50 ppm/°C high-pulse thick film chip resistors	47-48
		SG73P	High-pulse thick film chip resistors	49-50
		SG73S	High voltage surge thick film chip resistors	51-53
	High Voltage	HV73	High-voltage thick film chip resistors	54-55
		HV73V	Automotive high-voltage thick film chip resistors	56-57
	High Temperature	HSG73P	200°C high-temperature thick film chip resistors	58-59
	Anti Sulfuration	HSG73P-RT	Sulfur-resistant 200°C high-temperature thick film chip resistors	60-62
		HV73-RT	Sulfur-resistant high-voltage thick film chip resistors	63-65
		HV73V-RT	Sulfur-resistant automotive high-voltage thick film chip resistors	66-68
		RK73-RT	Sulfur-resistant general-purpose thick film chip resistors	69-72
		RK73G-RT	Sulfur-resistant 50 ppm/°C thick film chip resistors	73-75
		RS73-RT	Sulfur-resistant 25 ppm/°C thick film chip resistors	76-78
		SG73-RT	Sulfur-resistant extremely high pulse thick film chip resistors	79-81
		SG73P-RT	Sulfur-resistant high-pulse thick film chip resistors	82-84
		SG73S-RT	Sulfur-resistant high voltage surge thick film chip resistors	85-87
		SR73-RT	Sulfur-resistant low-value thick film chip resistors	88-90
		WK73-RT	Sulfur-resistant wide terminal thick film chip resistors	91-93
	Molded Heat-Cycle	MWS	Molded wirewound resistors	94-95
		SLR1	Molded thick film resistors	96-97
	Fusing Resistors	RF73	Fusing chip resistors	98-99
	Cylindrical	RN41, RD41, CC	MELF resistors	100-102
	Networks	CNN	Thin film chip resistor array	103-104
		HVDP08	High precision high-voltage dividers	105-106
		RB(X), RD(X), RLA, RT(X)	High precision thin film networks	107-109
		RIA, RNX	High precision thin film arrays	110
		RTY	High precision voltage dividers	111
	Low Resistance Current Sense/Shunts	.CSR	Four-terminal molded metal plate current sense resistors	112-113
		PSF4	Four-terminal current sense shunts	114-115
		PSL2	Two-terminal current sense shunts	116-117
		SL, SLN, SLZ, TSL	Molded metal plate current sense resistors	118-120
		SLW, SLN	Extended power molded metal plate current sense resistors	121-122
		SR73	Low-value thick film chip resistors	123-125
		SR73 (High Power)	Extended power low-value thick film chip resistors	126-127
		TLR2A	Small size metal plate current sense resistors	128-129
		TLR-2B, 2H, 3AW	Metal plate current sense resistors	130-131
		TLRH	High power metal plate current sense resistors	132-133
		TLR-W-P	Extended power metal plate current sense resistors	134-135
		TLRZ	High-current jumpers	136-137
		UR73	Current sense thick film chip resistors (Low T.C.R)	138-140
		UR73V	Current sense thick film chip resistors (for Automotive, Low T.C.R)	141-142
		WK73S	Wide-terminal current sense thick film chip resistors	143-144
		WU73	75 ppm/°C wide-terminal current sense thick film chip resistors	145-146

Leaded Resistors	General	CF	Carbon film through-hole resistors	147-148
		J	Zero ohm molded jumpers	149-150
		JL	Jumper wire	151
		MF, MFS, RK	Metal film through-hole resistors	152-153
		SN3A/3D	High-power metal film through-hole resistors	154-155
		SNF	5% metal film through-hole resistors	156-157
		Z	Zero ohm conformal coat jumpers	158-159
	Precision	RNS	MIL approved metal film leaded resistors	160-161
	High Voltage	CPCN	Ceramic composition MELF resistors	162-163
		GS	High-voltage metal glaze through-hole resistors	164-165
		HPC	High-power anti-pulse ceramic composition through-hole resistors	166-167
		PCF	Anti-pulse ceramic composition through-hole resistors	168-169
		PSN, PV, PSO,		
		PN, PWW, PAP	High-voltage cylindrical resistors	170-172
		RCR	Anti-surge metal glaze through-hole resistors	173-174
	Power Type	BGR, BWR, BSR	Ceramic case through-hole resistors	175-179
		BGRV, BWRV, BSRV	Automotive ceramic case through-hole resistors	180-182
		BPR	Ceramic case metal plate through-hole resistors	183-184
		CW, CWP, CWH	Wirewound through-hole resistors	185-187
		LR	Custom milliohm resistors	188-189
		MOS (X)	High-power metal oxide film through-hole resistors	190-193
		RW	High-power wirewound through-hole resistors	194-195
		SPR (X)	High-power carbon film through-hole resistors	196-197
	Fusing Type	CWFS	Fusing wirewound through-hole resistors	198-199
		RF	Coat-Insulated fusing resistors	200-201
		RF25CC	Coat-Insulated fusing resistor (Constant current fusing type)	202-203
Thermistors/Thermal Sensors		Caution & Terms	Thermal Sensors	204
	Platinum Thin Film (SMD)	SDT73H, SDT73S	Thermal sensors	205-206
		SDT73V	Automotive thermal sensors	207-208
		NEW WTP	Platinum thin film chip thermal sensors for wire bonding	209-210
	Platinum Thin Film (Leaded)	SDT101	Cylindrical through-hole thermal sensors	211-212
		SDT310	Through-hole thermal sensors	213-215
		SDT310HCTP	Small radial through-hole thermal sensors	216-218
		SDT310VASP2	Small axial through-hole thermal sensors, fast response	219-221
	Platinum Thin Film (Custom)	ST	Thermal sensors	222-225
	Linear P.T.C. (SMD)	LP73	High-resolution thin film chip thermal sensors	226-227
		LT73	Thin film chip thermal sensors	228-229
		LT73V	Automotive thin film chip thermal sensors	230-231
Inductors		Caution & Terms	Inductors	232
		CZB	Multilayer ferrite bead	233-234
		CZP	Multilayer power ferrite bead	235-236
		MHL	Multilayer ceramic inductor	237-238
Circuit Protection	Fuses	Caution & Terms	Fusing Components	239
	Ceramic Case	CCF1F	Fast-blow anti-surge chip fuses	240-241
		CCF1N	Anti-surge chip fuses	242-243
	Flat Chip	TF	Thin film chip fuse	244-245
		TF16VN	Chip current fuse (Automotive)	246-247
	Varistors	Caution & Terms	Varistors	248
		NV73	Multilayer type metal oxide varistors	249-253
		NV73DL	Multilayer type metal oxide varistors (Automotive)	254-255
		NV73S	Multilayer type metal oxide varistors	256-258
Substrates & Other Products		KA	Hybrid IC	259
		KLC	LTCC multilayer substrates	260-261
		KLCJ	Custom module	262
		RC	Test point chip	263-264

Resistance Range: 3.3Ω~390kΩ, Power Rating: 0.5W, 1W~5W, Max. Pulse Voltage: 8kV~25kV

Power Rating: 3W~40W(60W), BGRV: Wirewound (Glass Core), BWRV: Wirewound (Ceramic Core), BSRV: Metal oxide film (Ceramic Core), For Automotive

Current Sense Resistors Selection Guide

KOA offers complete family of Current Sense Resistors capable of sensing large to small currents with ultra-low resistance

Applications: Current management sensor including charge/discharge of secondary batteries • Current control sensor of motors and DC/DC converters • Circuit protecting sensor by overcurrent detection

Current Sense Resistors

NOTE: W673, WK73, WN73H, WU73 (Wide terminal film resistors are reverse geometry)

At KOA, we know taking care of the environment is important. That is why we have taken the steps to ensure we offer a product that fits your needs while adhering to global environmental regulations. In 2006, we complied with the EU's RoHS Directive, allowing us to offer products that are RoHS compliant, and in 2007 we met guidelines outlined in the IT Products Pollution Control Act for the People's Republic of China. In addition, we are now enforcing stricter chemical regulations set by Europe through watching the chemical input of our products. Our laboratory is now ISO/IEC 17025 certified, and we are constantly working to think of ways to improve our technology, such as by offering halogen-free specifications. By actively addressing our environmental impact today, you can be certain KOA will be there in your future.

EU RoHS

The restriction of Hazardous Substances Directive (2002/95/EC), (RoHS), became effective on July 1 of 2006 requiring the usage of restriction of following six hazardous substances in the manufacture of electrical and electronic equipment placed on the market. This directive was amended on June 8 of 2011, to Recast Directive 2011/65/EU of the European Parliament and of the Council. The original directive was expired as of January 2, 2013 and replaced by a new directive (2011/65/EU) on the following day. Later, Annex II (Restricted Substances List) was amended by Commission Delegated Directive (2015/863/EU) and four phthalates were added to the restricted substances list. The followings are restricted substances and maximum concentration:

- Lead (0.1wt%)
- Mercury (0.1wt%)
- Cadmium (0.01wt%)
- Hexavalent Chromium (0.1wt%)
- Polybrominated biphenyls [PBBs] (0.1wt%)
- Polybrominated diphenyl ethers [PBDEs] (0.1wt%)
- Bis (2-ethylhexyl) phthalate [DEHP] (0.1wt%)
- Butyl benzyl phthalate [BBP] (0.1wt%)
- Dibutyl phthalate [DBP] (0.1wt%)
- Diisobutyl phthalate [DIBP] (0.1wt%)

* The percentage in parentheses show the maximum concentration value in the homogeneous material.

The restriction of applications in the annex in the directive is exempted.

KOA's products applicable with this exemption to EU RoHS2 are as follows (as of July 2022):

- Copper alloy containing up to 4% lead by weight 6(c).
- Electrical and electronic components containing lead in a glass or ceramic other than dielectric ceramic in capacitors, e.g. piezoelectronic devices, or in a glass or ceramic matrix compound 7(c)-I.

To meet EU RoHS2, you need to choose lead (Pb) free material for termination surface material when our product has both type designation, leaded and lead free. Please contact our sales representatives for details.

Revised Chinese RoHS

(Management Methods for the Restriction of the Use of Hazardous Substances in Electrical and Electronic Products)

China RoHS became effective in March 2007 and the Revised China RoHS was promulgated in January 2016 and became effective on July 1, 2016. The compliance management catalog (target products) and exemption list for the second step (inclusion restriction) were released in March 2018 and we must comply with requirements of the "evaluation system" from November 1, 2019.

For each product, we disclose the content information of the six hazardous substances directed by China RoHS. Please contact our sales representatives for details.

REACH

"Regulation concerning the Registration, Evaluation, Authorization and Restriction of Chemicals" (REACH) has been enforced on June 1 of 2007 in EU area.

This regulation is aiming at safety evaluation and risk management of chemical substances, which are required to register according to the amount if used in businesses. Substance of Very High Concern (SVHC) must be registered if it is included in article. The European Waste Framework Directive has also been revised. As a result, products placed on the EU market after January 2021 are required to register SCIP data if the concentration of SVHC exceeds 0.1wt% in order to also provide information on environmentally hazardous substances to waste disposal companies. Information communication on such substances is also required throughout the supply chain using information communication tools such as chemSHERPA.

Precautions

All product specifications and data are subject to change without prior notice. Be sure to request and confirm the latest technical specifications before you order or use a part.

Matters common to all products

General

- For precautions in general, refer to “JEITA RCR-1001C Safety application guide on components for using electronic and electrical equipment” issued by JEITA.
- While the information and figures on the durability performance of the products we provide are accurate and highly reliable, based on fixed test conditions, please conduct advance testing with your own products. If you are unable to determine the suitability for each application, please be sure to contact us beforehand.

Disclaimer

- These products have been designed and manufactured for general use and are not intended for use in the following applications or those involving equivalent risks. When considering use of these products for these applications, etc., please be sure to contact us in advance. In addition, regarding the conditions such as the scope of the warranty provided to our customers, without special agreement in writing, we bear no responsibility whatsoever for any complaints, damage, etc. regarding these products when used for these applications, etc.
 1. Applications requiring high reliability (Ex.: gas/plumbing/electrical systems, etc., 24-hour continuous operation systems, settlement systems and other applications handling rights and assets, etc.)
 2. Applications requiring a high degree of safety (Ex.: automobiles, aerospace facilities, railway facilities, medical devices, safety equipment, other applications which may involve risk to life or limb, etc.)
 3. Applications in harsh environments (Ex.: equipment installed outdoors, equipment exposed to chemical pollution, equipment exposed to electromagnetic interference, equipment receiving vibration/impacts, etc.)
 4. Applications under conditions and/or in environments not listed in the Catalogs.
- Consider sufficient fail-safe design if the products are used in applications requiring high reliability. Ensure safety of a whole system by setting proactive circuits and redundant circuits to avoid the single failure of the product leading to unsafety of the equipment.

Environment for Use

- Unless otherwise specified, these products are not to be used in special environments. Examine and confirm performance and reliability before you use KOA products in any of the following environments:
 1. Under direct sunlight, exposed to the outside or to dust.
 2. In liquids such as water, oil, organic solvent, or liquid chemicals or in areas where these liquids are used.
 3. In locations where the products are exposed to salt-water breezes or corrosive gases, including SO₂, H₂S, Cl₂, NH₃, NO₂, etc.
 4. In locations with high static electricity and strong electromagnetic waves.
 5. In locations subject to condensation from dew.
 6. When the products or PCBs are sealed and coated by resin or other coating materials.
 7. In locations where the products are exposed to the fumes of lubricating oil.

Sulfuration

- Products with silver-based electrodes may increase in resistance in atmospheres containing sulfur gases (SO₂, H₂S, etc.) or when exposed to sulfide compounds. Take anti-sulfur measures in these environments.

Anti-pulse Characteristics

- If transient overloads such as power pulse or voltage/current surges are applied to KOA products, performance and reliability may be degraded. Contact KOA for data on antipulse characteristics and design help.
- Pay attention to discharges between terminations (arc-over) when high voltages are applied.

Storage

- Store KOA products in dust-free areas and keep them away from extreme temperatures; moisture; condensation; direct sunlight; salt-water breezes; corrosive gases such as SO₂, H₂S, Cl₂, NH₃, NO₂, etc.; or fumes from lubricating oil. Use desiccants if necessary.
- Please contact KOA for conditions and length of storage.

Storage of the Products with Lead-free Termination

- Solderability may degrade faster for products with Pb-free terminals than for products with Pb-bearing terminals.

Mounting

- Avoid physical damage or shock to the products, which may happen by holding them with hard tools like pliers or tweezers or by imperfect mounting-machine alignment. This damage may affect electrical characteristics or lead to disconnection or cracking.
- If the bottom point of the mounting nozzle is too low, a product could be pushed onto the PCB, which may deteriorate electrical characteristics or lead to cracking. Decelerate the nozzle just before mounting, and mount the product after correcting PCB deformations.
- Do not use products that have fallen during mounting or that have already been removed from a PCB.
- Contact KOA if PCBs are molded or sealed by coating material after component mounting.
- Do not stack PCBs after mounting, because this may damage the components.
- The electrical characteristics of film-type resistors and sensors may be changed by electrostatic overvoltage. Keep electrostatic discharge away from components when assembling and handling by monitoring machines and human contact.
- Prevent or eliminate the introduction of ionic substances like salt, salinity, or sweat, as these substances may degrade resistance due to moisture or corrosion.

Soldering

- Perform soldering within the temperature, time, and number of cycles specified for the product or its precautions. If a product is exposed to high temperatures for long periods of time, its color or electrical characteristics may change or disconnection may occur.
- Prevent any external force from being applied to the products until solder has cooled.
- Handle carefully to prevent mechanical stresses, such as from the bending or warping of a PCB, on the solder fillet.
- Confirm that solder flux residue does not affect the product.
- Confirm that components are in place when conductive adhesive is used in place of solder.

Precautions for Soldering with Lead-free Solder

- In Pb-free soldering, temperature may be higher than in the use of eutectic solder. Confirm that soldering is acceptable under actual conditions.
- Solder fillets may lift off double-sided boards with through holes. Confirm the solder strength on actual board material before assembly.

Washing

- Confirm that solder flux residue does not remain after washing, because it may cause deterioration of moisture and corrosion resistance.
- Confirm reliability in advance when using no-clean solder, water, or a soluble agent.
- Since Pb-free solder may contain many ionic materials, use RMA type solder or flux or wash sufficiently.
- Wash thoroughly after soldering to remove ionic substances like sweat and salinity. Control the washing agent appropriately to remove all ionic substances. Consult KOA when using a washing agent such as acid, alkaline, or organic solvent other than alcohol.
- Ultrasonic washing may damage products due to vibration resonance. High hydraulic pressure may also damage products. Ask KOA in advance for washing conditions.
- Dry products thoroughly after washing.

Dispose of the Products

- Observe appropriate laws and regulations for handling and disposal of products or packing materials.

The following precautions apply to surface mount devices

Precautions Related to PCB Bending Stress

- Arrange the long side of chip components parallel with the direction of the smaller coefficient of thermal expansion in anisotropic PCBs.
- Cracking of the solder fillet may occur with thermal cycling, because of mismatch of coefficients of thermal expansion between the board and the component. Pad size, amount of solder, and amount of heat radiating from the PCB must be designed carefully, especially with large components of 5 mm x 2.5 mm or larger.
- If products are mounted near a depaneling line, the termination or component may be damaged by large stresses during depaneling. Mount the products as shown in the following figure to minimize depaneling stress.

The level of stress on terminations $A > B \neq C > D > E$

- Use proper layouts to avoid stress from warping, bending, or deformation of the board in order to avoid solder cracking or component damage.

- Pay careful attention to products mounted near the edge of the board or near connectors, since stresses may happen during connection.
- Pay careful attention to layout when products are mounted near large components, when solder solidifies, it creates a stress in directions based on the large components, and cracking may occur.

- Design each land on right and left to have the same size. Different land size may change characteristics or cause cracks and tombstone effect while the solder is cooled down.

Mounting and Soldering

- Poor mounting machine adjustment may cause cracking, chipping, or alignment errors. Check and inspect the mounting machine in advance.
- Set backup pins in an appropriate layout to avoid damage to components mounted on the back of the board. Do not set these pins at nozzle positions.
- Adjust the bottom dead point of a dispenser away from the board when you apply adhesive to avoid damage to components mounted on the back of the board.
- Confirm that products solder properly if wave soldering is used.
- Pay close attention to amount of solder, since an improper amount may create a large stress on the component and cause cracking or malfunctions.

Soldering with a Soldering Iron

- Solder using a soldering iron at the temperature specified in the technical specifications or precautions for each product.
- Perform preheating as much as possible.
- Keep the tip of the soldering iron away from the body and the product terminal.
- Avoid physical damage or shock to components when using hard tools like pliers and tweezers.

The following precautions apply to lead type devices

Mechanical Stress

- Play close attention to vibration resonance after mounting.
- Do not add additional bending or twisting stresses to the product.
- Fix large components firmly.
- When lead wires are to be bent, use a large radius of curvature to avoid excessive stress on the terminal joint. Excessive stresses may cause the lead wire to separate from the electrode cap and damage the product.
- Do not add excessive stresses to the product body when lead wires are cut or held by the mounting machine.

Temperature Rise

- Pay close attention to heat radiation and interaction with other components, since large resistors general a large amount of heat when the rated power is applied.

Introduction of the Derating Curves Based on the Terminal Part Temperature

Background

Recently, the miniaturization, high power density and high temperature of the usage environment for the automotive devices have advanced. And requests for resistors to conform the high temperature is increasing. Figure 1 is the derating curve based on the terminal part temperature and this is introduced to realize these requests for the surface mount resistors safely. Rated terminal part temperature is the maximum terminal part temperature of the surface mount resistor at which the rated power may be applied continuously including the temperature rise by self heat generation.

Figure 1. Derating curve based on the terminal part temperature

The derating curves based on the terminal part temperature is already used in the metal plate type ultra-low resistance value resistors for current sensing. It is because these resistors are used in sensing of large currents such as inverters and converters which the terminal part temperature rise irrelevantly from the ambient temperature because of the generated heat from the nearby switching elements or the large current applied to the copper pattern. This point of view was deployed to the general resistors as well.

Overview of the Establishment of the Derating Curves Based on Ambient Temperature

The traditional derating curve, which is based on ambient temperature, was defined by IEC and JIS during the vacuum tube era, long before the appearance of surface-mount resistors. At the time, there were no printed circuit boards, and cylindrical resistors with lead wires were held above the board by lug terminals, as shown in figure 2.

Figure 2. Heat dissipation of cylindrical resistors

The Joule heat that is generated in the resistor is dissipated in three pathways regardless of the shape of the resistor. The first path is conduction to the connected parts such as the terminal. The second path is convection including the heat transfer to the atmosphere by natural convection and airflow. The third path is radiation by infrared.

The larger the area connected to the resistor becomes, the larger the heat conduction will be. And the larger the surface area of the resistor becomes, larger the convection and radiation will be.

When cylindrical resistors with lead wires are mounted on lug terminals, the lead wire is long and thin, so the thermal resistance to conduction is high, and heat dissipation through that path is low. On the other hand, the dissipation

of heat by convection and radiation is high, because the surface area of the resistor is large. Simulation shows that 80% to 90% of the heat from a cylindrical, lead-wire resistor is dissipated directly into the ambient air. The temperature of the resistor can be calculated by adding the temperature rise caused by self-heating to the ambient temperature. Because the ambient is sufficient to estimate the thermal resistance for most of the heat dissipation, the traditional derating curve was based on it.

Heat Dissipation of Surface Mount Resistors

Figure 3 shows the main heat dissipation paths for modern surface mount resistors. This type of resistor has only a small surface area, so convection and radiation have proportionally less heat dissipation. On the other hand, since the device is directly connected to the PCB pattern by a large part of the surface area, conduction will be the primary path for heat dissipation. In general, conduction through the terminal to the board represents over 90% of the heat dissipation, even when convection and radiation are presumed to be at their maximum levels. Therefore, the terminal temperature, on the main heat pathway, is the best location to monitor for controlling power dissipation.

Figure 3. Heat dissipation of surface mount resistors

Derating Curve Suitable for the Surface Mount Resistor

As shown in figure 4, when a given amount of power is applied to the resistor, any given point on the resistor's surface will have the same temperature rise over the terminal temperature, regardless of ambient temperature. This is because there is very little heat dissipation from the resistor's surface to the ambient air.

Figure 4. Contributing factor to the temperature of the surface mount resistor

However, surface temperatures at a given power will differ between different PCB designs, since the terminal temperature will be different. When resistors are mounted close to each other or other heat-generating devices, as shown in figure 5, there is a possibility that the temperature will be higher than the 70°C ambient temperature threshold used in the traditional JIS/IEC derating curve.

The traditional derating curve based on ambient temperature usually uses 70°C as the ambient temperature above which parts are to be derated. There will be no problem if resistors are used with sufficient electrical and thermal margin, but recent trends to miniaturization, high power density, and high-temperature use have reduced margins on design.

Redefining derating based on terminal temperature is a way to better represent the capabilities of the part. KOA will provide a derating curve suitable for surface mount resistors, based on testing under conditions where power rating is defined in terms of terminal temperature (as seen in terms & definitions).

derating curves

Figure 5. Temperature differs depending on the board

How to Use the Derating Curve Based on the Terminal Part Temperature

Here are some examples on using terminal temperature derating that lead to greater factors of safety, reduction in number of resistors, or use of a smaller component. The prior conditions will be the following (Be aware that the terminal part temperature does not always become 120°C when the ambient temperature is 100°C):

- (1) Ambient temperature of the board: 100°C
- (2) Terminal temperature of the surface mount resistor: 120°C
- (3) Actual power load: 0.05W

Figure 6. Selection by the traditional derating curve

- (4) Required margin of safety below rating according to designer's internal guidelines: 50%

The required power rating for the resistor using the ambient-temperature derating curve is calculated from conditions (1), (3), and (4). Figure 6 shows this result. For KOA's RK73B resistor series, one piece of 2A size, or two pieces of 1W size will be required.

However, when a resistor is selected using the terminal-temperature derating curve, which is better suited to surface-mount parts, conditions (2), (3), and (4) show that a single 1E (0402) size RK73B resistor would be sufficient.

Figure 7. Selection using a terminal-temperature derating curve

As seen above, the number of resistors and the mounting area can be reasonably reduced by using the proper derating curve based on terminal temperature, and this will lead to cost savings.

Type	Power Rating	Rated Ambient Temp.	Rated Terminal Part Temp.
SG73S 2A	0.25W	70°C	125°C
SG73P 2A	0.75W	—	105°C

Table 1. Rating column of products with 2 rated power

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

Derating curve suitable for the surface mount resistor

As shown in Table 1, for the surface mount resistors, there are products that have 2 rated powers for the same type in the rating column. The high rated power is basically available and applicable only to boards with adequate heat dissipation design for example multilayer boards, DCB (direct copper bonding) boards and single layer boards with wide heat dissipation area land. Therefore, the horizontal axis of the derating curve for high rated power is only defined with the terminal part temperature and please be careful that the conventional derating curve defined by the ambient temperature cannot be used in this case. For these products, “—” will be shown in the rated ambient temperature column which means “Not Applicable.”

In addition, we implement load life tests for the products with high rated power by using a test board that can specially control the terminal part temperature. In the case of Table 1, there will be 3 derating curves as shown from Figure 8 to Figure 10.

How to use each derating curve is shown as the following.

When 0.25W is the rated power

When the terminal part temperature can be measured:

The derating curve in Figure 8 can be applicable and it can be used with rated power 0.25W up to terminal part temperature 125°C. The derating curve with the horizontal axis

Figure 8. Derating curve of 0.25W rated power based on terminal part temperature

based on the terminal part temperature supercedes the conventional derating curve with the horizontal axis based on the ambient temperature. Therefore, even when the ambient temperature exceeds 100°C, it can be used with rated power 0.25W as long as the terminal part temperature is below 125°C.

Figure 9. Derating curve of 0.25W rated power based on ambient temperature

When the terminal part temperature is not measured and only the ambient temperature is measured:

The product may be used by derating the load power from the ambient temperature 70°C according to the conventional derating curve shown in Figure 9. However, as

Figure 10. Derating curve of 0.75W rated power based on terminal part temperature

mentioned in the past descriptions, the temperature of the resistor differs according to the wiring patterns and heat generating components nearby, even when the ambient temperature is the same, so it is not a derating method with good precision.

When 0.75W is the rated power

Managing the terminal part temperature is the requirement to apply the rated power 0.75W. Only the derating curve with the horizontal axis based on the terminal part temperature as shown in Fig.10 can be used but it can assure up to the high power. The product can be used with 0.75W if the terminal part temperature is below 105°C.

Reference: IEC TR 63091:2017 “Study for the derating curve of surface mount fixed resistors-derating curves based on the thermal part temperature.”

Precautions for the Resistors

Refer to the precautions of common matters for all products in the beginning of this catalog for the matters common to all products.

General in Fixed Resistors

- When the resistors are operated in ambient temperature above the rated temperature, the power rating must be derated according to the derating curve.
- Resistors in general may emit flame, fire or smoke when overload is applied.
- Flame retardant resistors may emit smoke or appear red hot when overload is applied but are unlikely to emit flame or fire.
- When the resistors are sealed and coated by coating materials such as resin, deterioration of the resistor by thermal stress or resin may affect the characteristics. Confirm with KOA for the performance and reliability specifications in advance.

When the resin absorbs moisture, the resistance to moisture and corrosion of the resistor may deteriorate, so be aware.

- When the resistor is coated, potted or molded by resin materials, the curing stress could cause peeling of protective coating and cracking of solder fillet, resulting in resistance change and disconnection. Do not coat nor seal the flame retardant coated resistors.
- Allow enough time for cooling after mounting metal film resistors, before washing off the flux. Residues of ionic substances may deteriorate resistances to moisture and corrosion.
- Cylindrical film resistors have inductance due to the spiral trimming. Please be aware when using in a high-frequency circuit.
- The flame retardant resistors are weak against mechanical stress compared with the general resistors due to the special coating. Please do not apply impact, vibration or pinching with pliers, tweezers to the resistor body. Do not apply any external force to the protective coating until drying is fully completed after washing.

Wirewound Type Resistors

- Wirewound type resistors have inductances and parasitic capacitances resulting from the winding structure. Therefore, they could resonate when used in a high frequency circuit.

Fusing Resistors

- Confirm beforehand that the overload condition of the abnormal situations are within the fusing characteristics.
- Contact KOA in advance when excess overload above the rated voltage is continuously applied, since there is a possibility of damage accumulated in the resistor.
- The arc phenomenon may occur when high voltage is applied again after fusing by over current. Make sure to use the product below the maximum open circuit voltage.
- Contact KOA about the maximum open circuit voltage, it varies depending on the product type and resistance.
- The fusing characteristics could change when the resistors are coated, potted and molded by resin materials.

Reference

- For the basic precautions of using resistors, refer to the technical report, "JEITA RCR-2121A Safety application guide for fixed resistors for use in electronic equipment", issued by JEITA.

Terms and Definitions

Nominal Resistance

- Designed resistance value usually indicated on the resistor.

Power Rating

- Maximum allowable power at rated temperature. Some of our chip resistor arrays and networks specify the power rating for the entire package, as opposed to each element.

Rated Ambient Temperature

- Maximum ambient temperature at which the power rating may be applied continuously. The rated ambient temperature refers to the temperature around the resistor mounted inside the equipment, not to the air temperature outside the equipment.

Rated Terminal Part Temperature

- Maximum terminal part temperature of the surface mount resistor at which the power rating may be applied continuously. Includes the temperature rise by self heat generation.

Derating Curve

- Curve that expresses the relation between ambient temperature or terminal part temperature and the maximum allowable power, which is generally expressed in percentage.

Rated Voltage

- Maximum allowable D.C. or A.C. voltage (rms), to be continuously applied to a resistor or a resistor element.

$$\text{Rated Voltage (V)} = \sqrt{\text{Rated Power (W)} \times \text{Nominal Resistance Value } (\Omega)}$$

Rated voltage shall be the calculated value or max. working voltage, whichever is lower.

Critical Resistance

- The maximum nominal resistance value at which the rated power can be applied without exceeding the maximum working voltage. The rated voltage is equal to the max. working voltage at the critical resistance value.

Max. Working Voltage

- Maximum D.C. or A.C. voltage (rms) that can be continuously applied to the terminations of a resistor. However, the maximum value of the applicable voltage is the rated voltage at the critical resistance value or lower.
- Maximum working voltage and rated voltage are calculated D.C. voltage based on rated power. Sine wave is assumed for the A.C. voltage so the peak voltage should be $\sqrt{2}$ times the maximum working voltage. When the wave form is not a sine wave, or when the resistance value exceeds the critical resistance, please contact us for the applicable peak voltage.

Overload Voltage

- Allowable voltage which is applied for 5 sec. according to the short time overload test. Overload voltage shall be 2.5 times of rated voltage or max. overload voltage, whichever is lower.

Maximum Overload Voltage

- Largest value of overload voltage

Example of Various Voltage of RK73G 2A

Dielectric Withstanding Voltage

- A.C. voltage (rms) that can be applied to a designated spot between the electrode and the outer coating for one minute according to the proof test.

Temperature Coefficient of Resistance (T.C.R.)

- Relative variation of resistance between two given temperatures when temperature is changed by 1K, which is calculated by the following formula.

$$\text{T.C.R. } (\times 10^{-6}/\text{K}) = \frac{R - R_0}{R_0} \times \frac{1 \times 10^6}{T - T_0}$$

R : Resistance value (Ω) at T (°C)

R₀ : Resistance value (Ω) at T₀ (°C)

T : Measured test temperature (°C)

T₀ : Measured base temperature (°C)

Rated voltage = $\sqrt{\text{Power rating} \times \text{resistance value}}$ or max. working voltage, whichever is lower

If any questions arise on whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature" in your usage conditions, please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details, refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of our catalog. Temperature rise at high power will depend on PCB layout. Be sure to contact factory prior to use and monitor terminal part temperature.

environmental applications

Temperature Rise

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

One-Pulse Limiting Electric Power

The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

4/26/22

features

- Wide lineup from 01005 to 2512 size
- Excellent heat resistance and weather resistance are ensured by the use of metal glaze thick film
- Suitable for both flow and reflow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified: 0201 (1H), 0402 (1E), 0603 (1J), 0805 (2A), 1206 (2B), 1210 (2E), 2010 (2H/W2H), 2512 (3A/W3A/W3A2)

dimensions and construction

Derating Curve

For resistors operated at an ambient temperature of 70°C or higher, the power shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve. Please refer to "Introduction of the derating curves based on the terminal part temperature" on the beginning of our catalog before use

*Parentheses indicate EIA package size codes.

Rated voltage = $\sqrt{\text{Power rating} \times \text{resistance value}}$ or max. working voltage, whichever is lower

*The nominal resistance value for RK73H1H (10Ω≤R<10MΩ, 1MΩ≤R≤10MΩ) is E24.

If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature."

Prior to use and for more details refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of the catalog.

While using under high power, the temperature of the product may increase depending on the condition of heat dissipation from PCB.

Be sure to check the terminal part temperature as well as precautions to use on delivery specification before use.

environmental applications

Temperature Rise

RK73H 1F-1J

RK73H 2A-2E

RK73H W2H-W3A2

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm
Cu foil thickness: 35μm

One-Pulse Limiting Electric Power

RK73H 1F-2A

RK73H 2B-W3A2

The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

environmental applications

One-Pulse Limiting Electric Power

Please ask us about the resistance characteristic of continuous applied pulse.

Please calculate One-Pulse Limiting Electric Power using upper limit of resistance (50mΩ or 100mΩ) for applied current.

The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Performance Characteristics

Parameter	Requirement		Test Method
	Limit	Typical	
Resistance	50mΩ Max. after the test	15mΩ Max. after the test	25°C
Overload (Short time)	50mΩ Max. after the test	18mΩ Max. after the test	Maximum overload current for 5 seconds , 1 cycle
Resistance to Solder Heat	50mΩ Max. after the test	15mΩ Max. after the test	260°C ± 5°C, 10 seconds ± 1 second
Rapid Change of Temperature	50mΩ Max. after the test	15mΩ Max. after the test	Characteristic (Nil) Standard: -55°C (30 minutes), +125°C (30 minutes), 100 cycles Characteristic (A) Heat Shock Resistance: -55°C (30 minutes), +125°C (30 minutes), 1000 cycles
Moisture Resistance	100mΩ Max. after the test	18mΩ Max. after the test	40°C ± 2°C, 90%-95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	100mΩ Max. after the test	18mΩ Max. after the test	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	100mΩ Max. after the test	15mΩ Max. after the test	+125°C, 1000 hours: 1F +155°C, 1000 hours: 1H, 1E, 1J, 2A, 2B, 2E, W2H/2H, W3A/3A

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

4/26/22

NEW

Coating Color - Black

features

- Lead-free resistor-meets RoHS thresholds without exemption
- Excellent heat resistance and weather resistance are ensured by the use of metal glaze thick film.
- Suitable for both flow and reflow solderings.
- These products meet EU RoHS requirements.

Derating Curve

For resistors operated at an ambient temperature of 70°C or higher, the power (for RK73B, RK73H) or a current rating (for RK73Z) shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve.

Please refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of the catalog before use.

Operating Temperature Range: -55°C ~ +155°C

Rated voltage = $\sqrt{\text{Power Rating} \times \text{Resistance value}}$ or Max. working voltage, whichever is lower.

*1 If you use at the rated power, please keep the condition that the terminal of the resistor is below the rated terminal part temperature.

Please refer to the derating curves based on the terminal temperature of right side on the previous page.

If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature" in your usage conditions, please give priority to the "Rated Terminal Part Temperature".

For more details, please refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of the catalog.

While using under high power, the temperature of the product may increase depending on the condition of heat dissipation from PCB.

Be sure to check the terminal part temperature as well as precautions to use on delivery specifications before use.

environmental applications - Temperature Rise

Simulated and Measurement Conditions

Temperature rise is simulated and measured under our conditions. So, the values will vary depending on the operating conditions and PCB used.

This data is a reference value to show the temperature rise under specific PCB conditions. And does not guarantee or recommend use under the described PCB conditions and load power conditions. If the terminal part temperature when power is loaded to the resistor exceeds the rated terminal part temperature, please reduce the load according to the derating curve based on the terminal part temperature.

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

features

- Metal-glaze thick film resistor for surface mounting
- High precision resistor with T.C.R. of ± 50 ppm/°C and tolerance of $\pm 0.25\%$, $\pm 0.5\%$ or $\pm 1\%$
- Suitable for both flow and reflow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the above derating curve. Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

features

- High reliability with ΔR of $\pm 0.1\%$ in the long-term reliability test
- Endurance at 85°C (3,000h): ΔR of $\pm 0.1\%$ in Standard Mode
- Operating temperature range $\sim 155^\circ\text{C}$
- Rated ambient temperature: 85°C
- High precision type $\pm 0.05\%$ is available
- Low current noise
- High reliability and high stability at elevated temperatures
- Improved moisture resistance by glass passivation layer
- Sulfur resistance verified according to ASTM B 809-95
- Products meet EU RoHS requirements
- AEC-Q200 Qualified

* No marking on E-192 values. Operating Temperature: -55°C to +155°C. At the maximum power in power mode, terminal temperature must be at or below the rated terminal part temperature.

† See the Performance Characteristics table below for use of the resistor in Power Mode

environmental applications - Performance Characteristics

Parameter	Requirement Δ R ± (%+0.05%) Limit		Test Method
	Typical		
Resistance	Within specified tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C: T.C.R. +5 (x10 ⁴ K); +25°C/55°C and +25°C/+155°C: others
Overload (Short time)	Standard Mode: ±0.05%	±0.01%	Rated Voltage x 2.5 or Max. overload voltage, whichever is less, for 5 seconds
	Power Mode: ±0.05%	±0.01%	1E, 1J: Rated voltage x 2.0 or Max overload voltage, whichever is less, for 5 seconds 2A, 2B, 2E: Rated voltage x 1.5 or Max overload voltage, whichever is less, for 5 seconds
Resistance to Solder Heat	±0.05%**	±0.01%	260°C ± 5°C, 10 seconds ± 1 second
Rapid Change of Temperature	±0.1%**	±0.02%	1E, 1J, 2A: -55°C (30 minutes) / +155°C (30 minutes), 1000 cycles 2B, 2E: -55°C (30 minutes), +155°C (30 minutes), 500 cycles
Moisture Resistance	Standard Mode: ±0.1%**	±0.05%	85°C ± 2°C, 85% ± 5%RH, 1000 hours. Rated voltage or Max working voltage, whichever is less. 1.5 hr ON, 0.5 hr OFF cycle
	Power Mode: ±0.1%**	±0.04%	85°C ± 2°C, 85% ± 5%RH, 1000 hours. Rated power x 0.1 or Max working voltage, whichever is less
Endurance at 85°C	Standard Mode: 0.1%	±0.03%	Rated terminal part temp. ± 2°C or Rated ambient temp. 85°C ± 2°C, 3000 hours 1.5 hr ON, 0.5 hr OFF cycle
	Power Mode: ±0.2%	±0.04%	Rated terminal part temp. ± 2°C or Rated ambient temp. 85°C ± 2°C, 3000 hours 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	±0.1%**	±0.05%	+155°C, 1000 hours

Precautions for Use

** Depends on resistance value, please contact KOA Speer for details.

- The property and electrostatically measured taping materials are used for the components, but attention should be paid to the fact that there is some danger the parts absorb on the top tapes to cause a failure in the mounting and the parts are destructured by static electricity (1J, 2A, 2B, 2E: 1kV and more, 1E: 0.5kV and more at Human Body Model 100pF, 1.5kQ) to change the resistance in the conditions of an excessive dryness or after the parts are given vibration for a long time as they are packaged on the tapes. Similarly, care should be given not to apply the excessive static electricity when mounting on the boards.
- Ionic impurities such as flux etc. that are attached to these products or those mounted onto a PCB, negatively affect their moisture resistance, corrosion resistance, etc. The flux may contain ionic substances like chlorine, acid, etc. while perspiration and saliva include ionic impurities like sodium (Na⁺), chlorine (Cl⁻) etc. Therefore these kinds of ionic substances may induce electrical corrosion when they invade into the products. Either through washing or using RMA solder and flux are necessary since lead free solder contains ionic substances. Washing process is needed, before putting on moisture proof material in order to prevent electrical corrosion.
- The upper electrodes could be peeled off when a heat-resistant masking tape is attached to the mounted chip resistors and then detached from them. It is confirmed that the adhesiveness gets stronger due to the exposure to heat under mounting. Accordingly, we recommend the use of masking tape be refrained. If the use of heat-resistant masking tape is unavoidable, please make sure that the adhesives on the tape do not directly come in contact with the product.
- When high-pressure shower cleaning is implemented, there is a possibility of exfoliation of the top electrodes caused by the water pressure stress so please avoid the implementation.
- If the implementation is unavoidable, then please evaluate the products beforehand.

For Surface Temperature Rise Graph see Environmental Applications. Additional environmental applications can also be found at www.koaspeer.com
Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

1/20/25

precision thin (metal) film flat chip resistors (high reliability)

features

- High reliability with ΔR of $\pm 0.1\% \sim \pm 0.25\%$ in the long-term reliability test
- Endurance at 85°C (1,000h): ΔR of $\pm 0.1\%$ in Standard Mode
- Operating temperature range $\sim 155^\circ\text{C}$
- Rated ambient temperature: 85°C
- High precision type $\pm 0.05\%$ is also available
- Low current noise
- Improved moisture resistance by high humidity protective coating
- Suitable for control circuits in various industrial equipment
- Sulfur resistance verified according to ASTM B 809-95
- Products meet EU RoHS requirements
- AEC-Q200 Qualified

Derating Curve

For resistors operated at an ambient temperature of 85°C or above, a power rating shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve. Please refer to "Introduction of the derating curves based on the terminal part temperature" on the beginning of our catalog before use.

features

- Metal-glaze thick film resistor for surface mounting
- High precision resistor with T.C.R. $\pm 25 \times 10^{-6}/K$ and tolerance $\pm 0.1\%$
- High reliability with ΔR of $\pm 0.2\%$ and $\pm 0.5\%$ in the reliability test
- Suitable for both flow and reflow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

Rated voltage = $\sqrt{\text{Power rating} \times \text{resistance value}}$ or max. working voltage, whichever is lower

*1 Measurement Temperature: +25°C/+125°C. Cold T.C.R. (-55°C/+25°C) is -50~+25x10⁻⁶/K

*2 Please inquire about E-192

If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves in the terminal part temperature" in the beginning of the catalog.

environmental applications

Temperature Rise

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

One-Pulse Limiting Electric Power

The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Rated voltage = $\sqrt{\text{Power rating} \times \text{resistance value}}$ or max. working voltage, whichever is lower

¹ If you want to use at rated power use derating curves based on the terminal part temperature on the right side graph located below.

If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature", please give priority to the "Rated Terminal Part Temperature." For more details refer to the "Introduction of the derating curves based on the terminal part temperature" in the beginning of the catalog.

environmental applications

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve.

Please refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of the catalog before use.

Temperature Rise

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Simulated and Measurement Conditions

Temperature rise is simulated and measured under our conditions. So, the values will vary depending on the operating conditions and PCB used.

One-Pulse Limiting Electric Power

The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

features

- SMD metal film resistors of wide terminal type
- High precision type $\pm 0.1\%$ is also available as standard
- High performance T.C.R. ± 10 ppm/ $^{\circ}\text{C}$ is also available as standard
- Low current noise
- Operating temperature range $\sim 155^{\circ}\text{C}$
- Rated ambient temperature: 85°C
- High reliability with ΔR of $\pm 0.1\%$ in the long-term reliability test
- Endurance at 85°C (1,000h): ΔR of $\pm 0.1\%$
- Improved moisture resistance by special protective coating
- High precision resistor solution for tough environments, especially in high reliable automotive, medical and industrial applications
- Suitable for both flow and reflow solderings
- Products meet EU RoHS requirements
- Sulfur resistance verified according to ASTM B 809-95
- AEC-Q200 Qualified

Rated voltage = $\sqrt{\text{Power rating} \times \text{resistance value}}$ or max. working voltage, whichever is lower

If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature" in your usage conditions, please give priority to the "Rated Terminal Part Temperature."

Prior to use and for more details, please refer to the "Introduction of the derating curves based on the terminal part temperature" in the beginning of our catalog.

environmental applications

Derating Curve

For resistors operated at an ambient temperature of 85°C or above, a power rating shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve.

Please refer to "Introduction of the derating curves based on the terminal part temperature" on the beginning of our catalog before use.

* Depends on resistance value

features

- Superior to RK73 series chip resistors in surge withstanding voltage and pulse withstanding voltage
- Suitable for both reflow and flow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified: 0603(1J), 0805(2A), 1206(2B), 1210(2E), 2010(2H/W2H), 2512(3A/W3A)

dimensions and construction

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

dimensions and construction

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature in the Applications and Ratings chart, the power shall be derated according to the derating curves on the left.

If you want to use the rated power of ^{*1}, ^{*3}, please use the derating curve based on the terminal part temperature in the far left graph. Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

*¹ Cold T.C.R. (-55°C ~ +25°C) is +150 x 10⁻⁶/K

*² Applies when power rating is 0.4W or lower.

Rated voltage = $\sqrt{\text{Power rating} \times \text{resistance value}}$ or max. working voltage, whichever is lower

Please contact KOA Speer for how to handle a specific surge/pulse

If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

environmental applications
Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

If you want to use the rated power of ², please use the derating curve based on the terminal part temperature above.

Additional environmental applications can also be found at www.koaspeer.com

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

high temperature flat chip resistors

features

- High heat resistance that can be used even at high temperatures of 155°C or higher. The maximum operating temperature of Sn plating products compatible with solder mounting is 175°C, and Au plating products compatible with conductive glue mounting is 200°C.
- Excellent heat resistance and weather resistance are ensured by the use of metal glaze thick film
- High stability and high reliability with the triple-layer structure of electrode
- Superior to RK73 series chip resistors pulse withstanding voltage and high power
- Applicable to various kinds of automatic mounters for taping, etc
- Products meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

environmental applications

Temperature Rise

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

One-Pulse Limiting Electric Power

The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse.

high temperature flat chip resistors (anti-sulfuration)

features

- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material
- High heat resistance that can be used even at high temperatures of 155°C or higher. The maximum operating temperature of Sn plating products compatible with solder mounting is 175°C.
- Excellent heat resistance and weather resistance are ensured by the use of metal glaze thick film
- High stability and high reliability with the triple-layer structure of electrode
- Superior to RK73 series chip resistors pulse withstanding voltage and high power
- Applicable to various kinds of automatic mounters for taping, etc
- Products meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

Additional environmental applications can also be found at www.koaspeer.com

features

- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material
- Excellent heat resistance and weather resistance are ensured by the use of metal glaze thick film
- High stability and high reliability with the triple-layer structure of electrode
- Suitable for both flow and reflow
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified: 0201 (1H), 0402 (1E), 0603 (1J), 0805 (2A), 1206 (2B), 1210 (2E), 2010 (W2H), 2512 (W3A)

Rated voltage = $\sqrt{\text{Power rating} \times \text{resistance value}}$ or max. working voltage, whichever is lower

* If you use at the rated power, please keep the condition that the terminal of the resistor is below the rated terminal part temperature. Please refer to the derating curves based on the terminal temperature.

If any questions arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," in your usage conditions, please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves in the terminal part temperature" in the beginning of the catalog.

While using under high power, the temperature of the product may increase depending on the condition of heat dissipation from PCB. Be sure to check the terminal part temperature as well as precautions to use on delivery specification before use.

environmental applications

Derating Curve

**RK73B-RK73H-RK73Z-RT
Ambient Temperature**

**RK73B-RK73H-RK73Z-RT
Terminal Part Temperature**

**RK73B-RK73H-RT
Terminal Part Temperature W3A2**

For resistors operated at an ambient temperature of 70°C or higher, the power (for RK73B, RK73H) or a current rating (for RK73Z) shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve.

Please refer to "Introduction of the derating curves based on the terminal part temperature" on the beginning of our catalog before use.

Temperature Rise

RK73B 1F-1J

RK73B 2A-2E

RK73B W2H-W3A2

RK73H 1F-1J

RK73H 2A-2E

RK73H W2H-W3A2

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm
Cu foil thickness: 35µm

Please refer to conventional products for characteristic data such as temperature rise.

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

One-Pulse Limiting Electric Power

The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Please ask us about the resistance characteristic of continuous applied pulse. Please calculate One-Pulse Limiting Electric Power using upper limit of resistance (50mΩ or 100mΩ) for applied current. The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Derating Curve

For resistors operated at an ambient temperature of 85°C or above, a power rating shall be derated in accordance with the derating curve.

For resistors operated terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve. Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

Temperature Rise

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Measurement condition
 Room temperature: 25°C
 PCB: FR-4t = 1.6mm
 Cu foil thickness: 35µm

One-Pulse Limiting Electric Power

The maximum applicable voltage is equal to the max. overload voltage. Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Please refer to conventional products for characteristic data such as temperature rise.

features

- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material/pulse
- Superior to RK73 series chip resistors in pulse withstanding voltage
- Suitable for both reflow and flow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

environmental applications

Derating Curve

Ambient Temperature

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

Terminal Part Temperature

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

surge current flat chip resistors (anti-surge, anti-sulfuration)

Temperature Rise

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm

*1 Cold T.C.R. (-55°C ~ +25°C) is $\pm 150 \times 10^{-6} / K$

*2 Applies when power rating is 0.4W or lower.

Rated voltage = $\sqrt{\text{Power rating} \times \text{resistance value}}$ or max. working voltage, whichever is lower

If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

environmental applications

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

If you want to use the rated power of ², please use the derating curve based on the terminal part temperature above.

Additional environmental applications can also be found at www.koaspeer.com

endured surge voltage flat chip resistors (anti-surge, anti-sulfuration)

environmental applications (continued)

ESD Limiting Voltage

Temperature Rise

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Measurement condition
Room temperature: 25°C
PCB: FR-4 t = 1.6mm
Cu foil thickness: 35μm

Please refer to conventional products for characteristic data such as temperature rise.

low resistance flat chip resistors (anti sulfuration)

features

- Excellent anti-sulfuration characteristic due to using high sulfuration-proof inner top electrode material
- Current detecting resistors for power supply, motor circuits, etc
- High reliability and performance with resistance tolerance ± 1.0 , T.C.R. $\pm 100 \times 10^{-6}/K$
- Suitable for both reflow and flow solderings
- Products with lead free termination meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

Rated voltage = $\sqrt{\text{Power rating} \times \text{resistance value}}$ or max. working voltage, whichever is lower

¹ The nominal resistance value for SR731E (1Ω~10Ω), SR731J, 2A, 2B (0.1Ω~0.43Ω) and SR732E (0.1Ω~0.39Ω) is in E24

² Please use the derating curve based on the terminal part temperature.

If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

SR73 2A (0.5W), SR73 2B (0.5W), SR73 2E (0.66W)

Temperature Rise

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Measurement condition
 Room temperature: 25°C
 PCB: FR-4t = 1.6mm
 Cu foil thickness: 35μm

One-Pulse Limiting Electric Power

Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Rated voltage = $\sqrt{\text{Power rating} \times \text{resistance value}}$ or max. working voltage, whichever is lower

¹ When using Power Rating, please use the derating curves based on the terminal part temperature below.

If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature", please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to the "Introduction of the derating curves based on the terminal part temperature" in the beginning of the catalog.

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

When the terminal part temperature of the resistor exceeds the rated terminal part temperature shown above, the power shall be derated according to the derating curve.

Please refer to "Introduction of the derating curves based on the terminal part temperature" in the beginning of the catalog before use.

Temperature Rise

Simulated and Measurement Conditions

Temperature rise is simulated and measured under our conditions. So, the values will vary depending on the operating conditions and PCB used.

One-Pulse Limiting Electric Power

The maximum applicable voltage is equal to the max. overload voltage.

Please ask us about the resistance characteristic of continuous applied pulse.

The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Please refer to conventional products for characteristic data such as temperature rise.

Additional environmental applications can also be found at www.koaspeer.com

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

3/20/25

features

- Flame retardant coating (UL94 V-0)
- It has excellent pulse resistance and is suitable as a surface mount component for precharge resistance, snubber resistance, and damping resistance
- Products with EU RoHS requirements
- AEC-Q200 Qualified

Endurance of Rated Terminal Part Temperature	±5%	±3%	130°C ± 2°C, Rated Voltage, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Resistance to Solvent	No abnormality in appearance such as disappearance of making, etc.	—	On immersing the sample in IPA for 3 minutes, the resistor surface should be lightly wiped with a dry cloth (velvet or gauze)
High Temperature Exposure	±2%	±0.3%	+155°C, 1000 hours

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

11/11/22

features

- Thick film resistor protected by liquid crystal polymer resin
- Excellent heat cycle characteristics
- Encapsulated with flame retardant resin molding. (UL94 V-0)
- High operating temperature range up to 180°C
- Products meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

Rated voltage = $\sqrt{\text{Power Rating} \times \text{Resistance Value}}$ or Max. working voltage, whichever is lower

If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

environmental applications

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve. Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

Temperature Rise

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm
Cu foil thickness: 35μm

One-Pulse Limiting Electric Power

The maximum applicable voltage is equal to the max. overload voltage.

Please ask us about the resistance characteristic of continuous applied pulse.

The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Performance Characteristics

Parameter	Requirement Δ R ±%		Test Method
	Limit	Typical	
Resistance	Within specified tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C

Endurance at 70°C	±2%	±0.2%	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle

features

- In normal condition, it works as a resistor and when excessive voltage is applied, it protects circuits by fusing quickly
- The same shape as RK73 series
- Suitable for both flow and reflow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- Recognized by safety standard UL1412. (0603 (1J) is not recognized)

RN41: MELF type fixed metal film resistors
RD41: MELF type fixed carbon film resistors
CC: MELF type cross-conductors

features

- Free direction for mounting due to cylindrical design
- High precision products (Resistance tolerance $\pm 0.1\%$ and T.C.R. $\pm 25 \times 10^{-6}/K$) available (RN41)
- The electrode strength is firm
- The noise characteristics are excellent
- Suitable for reflow, flow and iron soldering
- Products meet EU RoHS requirements
- AEC-Q200 Qualified (RN41 2ES/3AS, CC 12M/25)

Dimensions (mm)

Weight 9.70g/1000pcs

Performance Characteristics

Parameter	Requirement $\Delta R \pm(\%+0.05\Omega)$		Test Method
	Limit	Typical	
Resistance	Within specified tolerance	—	25 $^{\circ}$ C
T.C.R.	Within specified T.C.R.	—	+25 $^{\circ}$ C/-55 $^{\circ}$ C, +25 $^{\circ}$ C/+125 $^{\circ}$ C
Overload (Short time)	$\pm 0.1\%$	$\pm 0.01\%$	Rated voltage x 2.5 or Max. overload volume, whichever is less, for 5 seconds
Resistance to Soldering Heat	$\pm 0.1\%$	$\pm 0.02\%$	260 $^{\circ}$ C $\pm 5^{\circ}$ C, 10 seconds ± 1 second
Rapid Change of Temperature	$\pm 0.25\%$	$\pm 0.01\%$	-55 $^{\circ}$ C (30 minutes), +125 $^{\circ}$ C (30 minutes), 5 cycles
Moisture Resistance	$\pm 0.25\%$	$\pm 0.03\%$	40 $^{\circ}$ C $\pm 2^{\circ}$ C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70 $^{\circ}$ C	$\pm 0.25\%$	$\pm 0.03\%$	70 $^{\circ}$ C $\pm 2^{\circ}$ C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	$\pm 0.25\%$	$\pm 0.02\%$	+125 $^{\circ}$ C, 100 hours

features

- High precision high voltage divider
- Maximum resistance value 51MΩ, maximum working voltage 1000V, maximum resistance ratio 1000:1
- Relative precision of pair resistors are guaranteed
- Higher integration saves board space and overall assembly costs
- Excellent reliability with standard molded IC package
- Suitable for reflow soldering
- Products meet EU RoHS requirements
- AEC-Q200 Qualified

example of application

typical characteristics

Endurance at 70°C (Typical: 1k Ω , 8 resistors/package)

merit of thin film resistor networks

Metal thin film resistors formed by sputtering method have very similar characteristic among pair resistors. When their characteristic of T.C.R., aging, etc. for relative precision is requested, it's very suitable to apply thin film resistor networks to utilize the characteristic as above.

four-terminal current sense resistor

current sense

features

- Extremely low resistance and high precision tolerance
- Low T.C.R. achieved ($\pm 50\text{ppm}/^\circ\text{C}$)
- Flameproof UL 94 V-0
- Products with lead-free terminations meet EU RoHS and China RoHS requirements

These pad dimensions are only for standard pattern and the characteristics are not guaranteed, which you are suggested to confirm before use.

environmental applications

One-Pulse Limiting Electric Power

PSF4

Please ask us about the resistance characteristic of continuous applied pulse.

The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Thermal Resistance

Type	Resistance (Ω)	Rth (°C/W)
PSF4	0.5m	8
	1m	14

$$R_{th} = (H_s - t_s) / \text{Power}$$

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions. Please refer to us before use.

The temperature of the resistor will increase the same ΔT from the standard terminal part temperature regardless of the ambient temperature when the same power is applied. This is because there is hardly any heat dissipation from the resistor surface to the ambient air.

Performance Characteristics

current sense

features

- Ultra low resistance, suitable for large current sensing
- Automatic mounting machines are applicable
- Suitable for reflow soldering (Not suitable for flow soldering)
- Products meet EU RoHS requirements
- AEC-Q200 Qualified

dimensions and construction

Derating Curve

When the terminal part temperature of the resistor exceeds the rated part temperature, the power shall be derated according to the derating curve.

For more details, please visit www.koaspeer.com and go to "Resources," then "Technical Information," and select "[Derating Curves - Caution & Terms.](#)"

	8W (126A)	±115	0.5mΩ			

environmental applications

One-Pulse Limiting Electric Power

Please ask us about the resistance characteristic of continuous applied pulse.

The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Thermal Resistance

Type	Resistance (Ω)	Rth (°C/W)
PSL2	0.2m	3.2
	0.5m	6.7

$$R_{th} = (H_s - t_s) / \text{Power}$$

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions. Please refer to us before use.

The temperature of the resistor will increase the same ΔT from the standard terminal part temperature regardless of the ambient temperature when the same power is applied. This is because there is hardly any heat dissipation from the resistor surface to the ambient air.

Performance Characteristics

current sense

features

- SMD type of small size, ultra-low resistance (3mΩ~) and high accuracy (±0.5%) resistor for current sensing
- Flameproof UL94V0 molded polymer case
- Excellent dimension accuracy, mountability and shock resistance
- Excellent terminal strength and solderability due to structure of a metal plate terminal electrode
- Easy to absorb the thermal expansion and shrinkage because of a metal plate terminal structure
- Suitable for flow, reflow and iron solderings
- Low profile type available (TSL)
- Wide range operating temperature -55°C to +180°C
- Products with lead-free terminations meet EU RoHS requirements
- AEC-Q200 Qualified

If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.

environmental applications

Derating Curve

For resistors operated at an ambient temperature of 70 $^{\circ}$ C or above, a power rating shall be derated in accordance with the above derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog before use.

 If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog.
¹ Prior to use, refer to the "Higher Power Ratings" in the beginning of catalog. Rated voltage = $\sqrt{\text{Power rating} \times \text{resistance value}}$ or max. working voltage, whichever is lower

environmental applications

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" on the beginning of our catalog before use.

features

- Current detecting resistors for power supply, motor circuits, etc.
- High reliability and performance with resistance tolerance $\pm 0.5\%$, T.C.R. $\pm 100 \times 10^{-6}/K$
- Suitable for both reflow and flow solderings
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- AEC-Q200 Qualified

environmental applications

One-Pulse Limiting Electric Power

Please ask us about the resistance characteristic of continuous applied pulse.
The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Thermal Resistance

Type	Resistance (Ω)	Rth (°C/W)
TLR2A	2m	26.1
	10m	54.7

$$R_{th} = (H_s - t_s) / \text{Power}$$

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions. Please refer to us before use.

The temperature of the resistor will increase the same ΔT from the standard terminal part temperature regardless of the ambient temperature when the same power is applied. This is because there is hardly any heat dissipation from the resistor surface to the ambient air.

Performance Characteristics

Parameter	Requirement ΔR %		Test Method
	Limit	Typical	
Resistance	Within regulated tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C

$$R_{th} = (H_s - t_s) / \text{Power}$$

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions. Please refer to us before use.

The temperature of the resistor will increase the same ΔT from the standard terminal part temperature regardless of the ambient temperature when the same power is applied. This is because there is hardly any heat dissipation from the resistor surface to the ambient air.

Performance Characteristics

Parameter	Requirement ΔR ±%		Test Method
	Limit	Typical	
Resistance	Within regulated tolerance	—	25°C

features

- SMD Type of small size, low resistance resistor for current detection
- Carrier metal plate inside, resistor of high radiation of heat structure (3AW, 3AP)
- High reliability and performance with low T.C.R.
- Automatic mounting machines are applicable
- Suitable for reflow soldering (2A: Not suitable for wave soldering)
- Products meet EU RoHS requirements
- AEC-Q200 Qualified*

*Please contact us for details

current sense

Rated voltage = $\sqrt{P \cdot R}$

If any questions should arise whether to use the "Rated Ambient Temperature" or the "Rated Terminal Part Temperature," please give priority to the "Rated Terminal Part Temperature." Prior to use and for more details refer to "Introduction of the derating curves on the terminal part temperature" in the beginning of the catalog. *Please inquire before use.

environmental applications

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

For resistors operated at a terminal part temperature of described for each size or above, a power rating shall be derated in accordance with the derating curve.

Please refer to "Introduction of the derating curve based on the terminal part temperature" in the beginning of our catalog prior use.

low resistance flat chip resistors (low T.C.R.)

Temperature Rise

UR73

Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm
Cu foil thickness: 35µm

UR73D

Measurement condition
Room temperature: 25°C
PCB: FR-4t = 1.6mm
Cu foil thickness: 35µm

Regarding the temperature rise, the value of the temperature varies per conditions and board for use since the temperature is measured under our measuring conditions.

One-Pulse Limiting Electric Power

Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

Performance Characteristics

Parameter	Requirement $\Delta R \pm (\% + 0.005\Omega)$		Test Method
	Limit	Typical	
Resistance	Within specified tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/+55°C and +25°C/+125°C
Overload (Short time)	$\pm 2\%$	$\pm 0.5\%$	Rated voltage x 2.5 for 5 seconds
Resistance to Solder Heat	$\pm 1\%$	$\pm 0.3\%$	260°C \pm 5°C, 10 \pm 1 second
Rapid Change of Temperature	$\pm 1\%$	$\pm 0.5\%$	-55°C (30 minutes) / +125°C (30 minutes), 100 cycles
Moisture Resistance	$\pm 2\%$	$\pm 1\%$	40°C \pm 2°C, 90%~95%RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	$\pm 2\%$	$\pm 1\%$	70°C \pm 2°C or rated terminal part temperature $\pm 2^\circ\text{C}$ 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	$\pm 1\%$	$\pm 0.3\%$	+125°C, 1000 hours

current sensing flat chip resistors (for automotive, low T.C.R.)

current sense

features

- Current detecting resistors for power supplies, motor circuits, etc.
- Low resistance (100mΩ or under) and high accuracy (±1%) for current detection
- High reliability and performance with T.C.R. $\pm 75 \times 10^{-6}/K$
- Suitable for flow and reflow solderings
- Products will meet EU RoHS requirements
- Operating temperature range $\sim 155^{\circ}C$
- AEC-Q200 Qualified

Endurance at 70°C	±2%	±0.2%	70°C ± 2°C or rated terminal part temperature ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	±1%	±0.1%	+155°C, 1000 hours

features

- Flameproof coating is available (specify “CFP”)
- Reduced body size (specify “CFS/CFPS”)
- Suitable for automatic machine insertion
- Stronger in pulse resistance than chip resistors of the same type
- Products with lead-free terminations meet EU RoHS and China RoHS requirements

Derating Curve

Surface Temperature Rise

Load Life @ 70°C, 1000 Hr

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Performance Characteristics

Parameter	Requirement ΔR ±(% + 0.05Ω)		Test Method
	Limit	Typical	
Resistance	Within specified tolerance	—	Measuring points are at 10mm ±1mm from the end cap.
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C
Overload (Short time)	±1%	±0.5%	Rated voltage x 2.5 or max. overload voltage for 5 seconds, whichever is lower
Resistance to Solder Heat	±1%	±0.5%	260°C ±5°C, 10 seconds ± 1 second, 350°C ± 10°C, 3.5 seconds ± 0.5 second
Terminal Strength	No lead-coming off and loose terminals	—	Twist 360°C, 5 times
Rapid Change of Temperature	±1%	±0.5%	-55°C (30 minutes), +125°C (30 minutes), 5 cycles
Moisture Resistance	±5%	±2.5%	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±3%	±1.5%	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Resistance to Solvent (CFP & CFPS only)	No abnormality in appearance. Marking shall be easily legible.	—	Ultrasonic washing with Isopropyl alcohol for 2 minutes. Power: 0.3W/cm², f: 28kHz, temp: 35°C±5°C
Flame Retardant (CFP & CFPS only)	No evidence of flaming or self-flaming	—	Flame test: The test flame shall be applied and removed for each 15 seconds respectively to repeat the cycle 5 times. Overload flame retardant: AC Voltage corresponding to 2, 4, 8, 16 and 32 times the power rating shall be applied for each 1 minute until disconnection occurs. However the applied voltage shall not exceed 4 times the maximum operating voltage.

features

- Type J are molded
- Suitable for automatic machine insertion
- Marking: Type J are black, no marking
- Products meet EU RoHS requirements

environmental applications

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Performance Characteristics

Parameter	Requirement	Test Method JIS C5201-1
Resistance	20mΩ or less	Measuring points are 10mm ± 1mm from the end cap
Resistance to Solder Heat		260°C ± 5°C, 10 seconds ± 1 second, 350°C ± 10°C, 3.5 seconds ± 0.5 second
Terminal Strength	No mechanical damages	(Pulling Test) Z16: 5N, 30 seconds, Z25: 10N, 30 seconds (Twist Test) 360°, 5 times (Bending Test) 5N, 90°, 2 times (Z16: 2.5N)
Rapid Change of Temperature	20mΩ or less	-55°C (30 minutes) / +125°C (30 minutes), 5 cycles
Moisture Resistance		40°C ± 2°C, 90-95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance @ 70°C		70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Solvent Resistance	No visible damages to protective coating and marking	Isopropyl alcohol with ultrasonic cleansing for 2 minutes Power: 0.3W/cm ² , f: 28kHz, Temperature: 35°C ± 5°C

coat-insulated precision fixed metal film leaded resistor

features

- High precision resistors with resistance tolerance $\pm 0.1\%$ and T.C.R. $\pm 5 \times 10^{-6}/K$
- Suitable for automatic machine insertion
- Products meet EU RoHS requirements
- Excellent long term stability in resistance values

Moisture Resistance	5.0	0.9	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle			
Load Life	5.0	0.7	40°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle			
Low Temperature Operation	5.0	0.7	-40°C, 24 hours			
High Temperature Exposure	5.0	2.0	+200°C, 1000 hours			

The resistance measurement before and after the examination should be performed in room temperature with difference ±1°C.

features

- Miniature construction can endure to high voltage and high power
- Excellent in anti-surge characteristics
- Wide resistance range of 500kΩ - 10GΩ and small T.C.R.
- Product meets EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in resistor element and brass cap.

features

- KOA original bulk ceramic resistors
- Excellent in anti-pulse resistance, inrush current and active discharge characteristics
- Higher reliability against disconnection compared to wirewound resistors and film resistors
- Products meet EU RoHS requirements
- Non-inductive resistors
- AEC-Q200 Qualified

features

- KOA original bulk ceramic resistors
- Flame retardant coating (Equivalent of UL 94 V-0)
- Excellent in in-pulse and inrush current characteristics
- Non-inductive resistors
- Products meet EU RoHS requirements
- Higher reliability against disconnection compared to wirewound resistors and film resistors
- AEC-Q200 Qualified

environmental applications

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the derating curve.

One-Pulse Limiting Electric Power

Please ask us about the resistance characteristic of continuous applied pulse. The pulse endurance values are not assured values, so be sure to check the products on actual equipment when you use them.

features

- PSN can respond to high voltage and high power with a wide resistance range of 500Ω~6GΩ
- PSO is made completely moisture preventive to be PSN that can be used under high moisture environment
- PN is a non-inductive type and can be used for high frequency
- PWW and PAP type are non-inductive wire wound resistors
- PWW resistors have the same shapes as PSN and can be used for a low resistance area that cannot be produced with PSN resistors
- PAP resistors are non-inductive wirewound resistors with inductance less than PWW can be used for pulse wave measurement, impulse generators, etc. and have the same dimensions as PWW resistors. EU RoHS regulation is not intended for lead in brass.

anti-surge power type leaded resistor

features

- Excellent anti-surge characteristics
- Stable characteristics of moisture resistance up to high resistance range
- RCR50 +(1MΩ - 12MΩ), RCR50EN (1MΩ - 12MΩ) and RCR60 (1MΩ - 12MΩ) are discharge resistors recognized by UL1676 and c-UL(CSA-C22.2 No.1-M94)
- RCR25EN (100kΩ~33MΩ), RCR50EN (100kΩ - 33MΩ) and RCR60 (100kΩ - 56MΩ) is approved by EN6234-68-1 G.10 safety
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.
- Surface mount style "N" forming is suitable for automatic mounting

environmental applications

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Notice of Surge Load

Surge withstanding load voltage for the resistors cannot be guaranteed when the undermentioned 4 items get to a remarkable overload in comparison with the conditions shown by surge withstanding voltage in Anti-surge characteristics. Please contact KOA in advance if such a case is anticipated.

1. Peak voltage to be applied
2. Pulse width
3. Conditions of protecting insulation around the resistor
4. Situation of proximity conductivity object

For example: In the figure, a metal wire is placed less than 5mm away from the resistor body, there is such a case that causes an electric discharge by a surge load 10kV and then destroys the outer coating.

BGRV: rectangular type wirewound resistors with glass core (for automotive)
BWRV: rectangular type wirewound resistors with ceramic core (for automotive)
BSRV: rectangular type metal oxide film resistors (for automotive)

features

- High power resistors
- Uses flame-retardant insulated ceramic case
- Excellent in anti-pulse and inrush current
- Suitable for high reliability applications like automotive
- Products meet EU RoHS requirements
- AEC-Q200 Qualified**

*Please contact us for details

Rated voltage= √Power Rating × Resistance value or Max. working voltage, whichever is lower.

Please consult with us in advance about custom-made products.

*** Please note that when used at a rated power of 60W, the surface temperature of the product will reach approximately 300°C.

rectangular type metal plate resistors

features

- Power type current detecting resistors
- Flame retardant resistors in ceramic case
- Automatic insertion for a 5mm pitch between terminals is applicable (26 type, 58 type)
- Low inductance
- Space saving
- Products with lead-free terminations meet EU RoHS requirements

High Temperature Exposure	±3.0%	±2.0%	+125°C, 100 hours
Resistance to Solvent	No evidence of damage to protective coating and marking	—	After immersing the sample in I.P.A for 60 seconds ± 10 seconds, the resistor surface should be rubbed with absorbent cotton 10 times

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

11/09/22

features

- Flameproof silicone coating equivalent (UL 94 V-0)
- CWH resistors meet MIL-PRF-26 (U characteristics)
- CWH high precision resistors with T.C.R. less than $\pm 20 \times 10^{-6}/K$
- Suitable for automatic machine insertion
- Excellent in long time stability
- Products with lead-free terminations meet EU RoHS and China RoHS requirements
- CW1SS has UL1412 approval (File No. E320246)
- Surface mount style "N" forming is suitable for automatic mounting CW, CWP

Thunder Surge	3%: CW1SS	—	Combination wave, +1.5kV 20 seconds 3 cycles
Load Life	0.5%: CW□H	0.45%: CW□H	-25°C, power rating, 1.5 hr ON, 0.5 hr OFF 2000 hours

* Refer to MIL-PRF-26G standard

features

- The super low resistance ($3\text{m}\Omega \sim$) is suitable for high power current sensing
- Pitches and heights adjustable according to mounting conditions
- All custom-made products
- Easy soldering
- Products with lead-free terminations meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in electrode, resistor element and glass.

Leadless resistors

dimensions and construction

* Please consult with factory about dimensions "P" and "H"
T style is applied for the diameter of $\phi 2.3$ or above

environmental applications

Derating Curve

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Performance Characteristics

Parameter	Requirement Δ R ±%		Test Method
	Limit	Typical	
Resistance	Within specified tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C
Resistance to Soldering Heat	±2.0%	±1.6%	350°C ± 10°C, 3 seconds
Moisture Resistance	±3.0%	±2.7%	Power rating x 1/10, 40°C, 90% - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±5.0%	±3.0%	Rated voltage, 70°C, 1000 hours 1.5 hr ON, 0.5 hr OFF cycle

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

12/18/25

reduced size metal oxide power type leaded resistor

features

- Small size power type resistor
- Coated with UL 94 V-0 equivalent flameproof material
- Suitable for automatic machine insertion
- Surface mount style "N" forming is suitable for automatic mounting
- Various types of formings are available
- High reliability
- Products meet EU-RoHS requirements
- Automatic mounting machine is applicable by surface mounted device style lead forming

leaded resistors

coat-insulated miniature precision power wirewound resistors

features

- Resistors meeting MIL-R-26E (U and V characteristics) and surface temperature (hot spot) 350°C max.
- Resistors with a wide range of 0.1Ω ~ 62kΩ, covering applications from precision to power
- RW□N type resistors are non-inductive wound and can be used in high frequency applications.
- Products meet EU RoHS requirements

Leaded resistors

 Rated Ambient Temperature: +70°C Operating Temperature Range: -55°C to +200°C
 Rated voltage = $\sqrt{\text{Power Rating} \times \text{Resistance value}}$ or Max. working voltage, whichever is lower.

environmental applications

Derating Curve

Surface Temperature Rise

Load Life @ 70°C, 1000 Hr

For resistors operated at an ambient temperature of 70°C or above, a power rating shall be derated in accordance with the above derating curve.

Performance Characteristics

Parameter	Requirement $\Delta R \pm(\% + 0.05\%)$		Test Method
	Limit	Typical	
Resistance	Within specified tolerance	—	Measuring points are at 10mm ±1mm from the end cap.
T.C.R.	Within specified T.C.R.	—	+25°C/+125°C
Overload (Short time)	$\pm(1\%+0.1\Omega)$	$\pm 0.5\%$	Rated voltage x 2.5 or max. overload voltage for 5 seconds, whichever is lower
Resistance to Solder Heat	$\pm 1\%$	$\pm 0.5\%$	260°C ± 5°C, 10s ± 1s, 350°C ± 10°C, 3.5s ± 0.5s
Terminal Strength	No lead-coming off and loose terminals	—	Twist 360°C, 5 times
Rapid Change of Temperature	$\pm 1\%$	$\pm 0.5\%$	-55°C (30 minutes) / +155°C (30 minutes), 5 cycles
Moisture Resistance	$\pm(3\%+0.1\Omega)$:1/4W-2W $\pm(5\%+0.1\Omega)$:3W,5W	1.5: 1/4W-2W 2.5: 3W, 5W	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	$\pm(3\%+0.1\Omega)$:1/4W-2W $\pm(5\%+0.1\Omega)$:3W,5W	1.5: 1/4W-2W 2.5: 3W, 5W	70°C ± 2°C, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Resistance to Solvent	No abnormality in appearance. Marking shall be easily legible	—	Ultrasonic washing with isopropyl alcohol for 2 minutes. Power: 0.3W/cm ³ , f: 28kHz, Temp: 35°C ±5°C
Flame Retardant	No evidence of flaming or self-flaming	—	Flame test: the test flame shall be applied and removed for each 15 seconds respectively to repeat the cycle 5 times. Overload flame retardant: power (AC) corresponding to 2, 4, 8, 16 and 32 times the power rating shall be applied for each 1 minute until disconnection occurs. However the applied voltage shall not exceed the value of 4 times of the maximum operating voltage

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

**coat-insulated wirewound resistors
(with fusing function)**

features

- Flameproof retardant coating (equivalent to UL94 V-0)
- Fail-safe mains fusing at AC 250V (CWFS23: 4.7Ω~9.1Ω: AC200V)
- Products with lead-free terminations meet EU RoHS

leaded resistors

Fusing Characteristics

I-R Characteristics

Precautions for the Thermal Sensors

Refer to the precautions of common matters for all products in the beginning of this catalog.

Particulars Common to Thermal Sensors

- Excessive voltage such as ESD, could damage thermal sensors.
- Water drops from condensation or impure substances that adheres between the electrode wires may cause insulation deficiency and lower the resistance value of the thermal sensors. Be aware when using this product.
- Avoid sudden changes in temperature to maintain the accuracy of the thermal sensors.
- Some of the thermal sensors use special temperature sensing films. Contact us if the sensors are constantly operated under high temperature environment.
- It is necessary to suppress self heating in the design to maintain accuracy of the thermal sensor if rated temperature is set.

Platinum Thin-Film Thermal Sensors

- Welding is recommended to connect the lead wires of SDT101B, SDT310P, SDT310MTM, SDT310AP, SDT310HCTP and SDT310VASP2 since they are heat resistant lead wires. Select the flux for stainless-steel when soldering. Wash the flux with hot water after the soldering to remove the residue completely.
- The 3-wire or 4-wire method is recommended for implementing high precision temperature measuring for both SDT101 and SDT310 series.
- When molded or placed in a metal tube filled with resin, the resistance value may change depending on the kind of resins used.

Terms and Definitions

Platinum Thin Film Thermal Chip Sensors

- Also known as a platinum resistance temperature detector, an electronic component whose resistance value changes with temperature as determined by standards.
- It uses a platinum thin film as a resistor and has excellent environmental resistance, and its resistance value rises almost linearly as the temperature rises.

Linear Positive Temperature Coefficient Resistor

- Unlike the platinum thin film thermal chip sensors, there are many types of resistance value changes with temperature, and there are many types of resistance values, and the resistance value changes with temperature.
- The resistance value change range is narrow compared to the thermistors but the linearity is high.

Thermistor

- Thermally sensitive resistors, constructed from temperature sensitive semi-conductive materials, with predictable, large variation in resistance due to change in temperature. There are two kinds of thermistors characterized by resistance change.
- PTC (Positive Temperature Coefficient): Resistance increases with a rise in temperature.
- NTC (Negative Temperature Coefficient): Resistance decreases with a rise in temperature.

Thermal Time Constant

- Time needed for a sensor's temperature to change 63.2% when the ambient temperature of a sensor is rapidly changed by a condition in which self heat generation can be ignored.

Thermal Dissipation Constant

- The necessary power which is needed to increase the temperature of the element 1°C by self heating and is expressed with the following formula:

$$\delta(W/^{\circ}C) = \frac{W}{(T_1 - T)}$$

W : Electrical input power (W)
T : Standard Temperature (°C)
T1 : Self heating temperature generated by applied power (°C)

Self-Heating Coefficient

- Self-heating coefficient expressed in °C/mW in values measured at temperature: 0°C in flowing oil with a velocity >0.2m/s, which is value of elements and vary with connecting or fixing methods.

Temperature Coefficient of Resistance (T.C.R.)

- Relative variation of resistance between two given temperatures when temperature is changed by 1K, which is calculated by the following formula.

$$T.C.R. (ppm/^{\circ}C) = \frac{R - R_0}{R_0} \times \frac{1}{T - T_0} \times 10^6$$

R : Resistance value (Ω) at T (°C)
R0 : Resistance value (Ω) at T0 (°C)
T : Measured test temperature (°C)
T0 : Measured base temperature (°C)

Specified Current

- The electricity which it is charged with in the element is moved to the range that rise in temperature due to a self-heat generation can be ignored. Ordinarily recommended measuring currents are 1mA for 100Ω and 0.1mA for 500Ω.

Rated Power

- The maximum wattage which can be continuously applied to a resistor at the rated ambient temperature.

Critical Resistance Value

- The maximum nominal resistance value at which the rated power can be applied without exceeding the maximum working voltage.
- The rated voltage is equal to the maximum working voltage at the critical resistance value.

Maximum Working Voltage

- Maximum D.C. or A.C. voltage (rms) that can be continuously applied to a resistor or a thermosensor. However, the maximum value of the applicable voltage is the rated voltage at the critical resistance value or lower.

Overload Voltage

- Allowable voltage which is applied for 5 sec. according to the short time overload test. Overload voltage shall be 2.5 times of rated voltage or max. overload voltage, whichever is lower.

Rated Ambient Temperature

- Maximum ambient temperature at which the power rating may be applied continuously. The rated ambient temperature refers to the temperature around the resistor mounted inside the equipment, not to the air temperature outside the equipment.

Derating Curve

- Curve that expresses the relation between ambient temperature and the maximum allowable power, which is generally expressed in percentage.

External Conductor

- A conductor connected to a temperature sensor that is located outside of the protective body.

Internal Conductor

- A conductor connected to a temperature sensor that is located inside of the protective body.

features

- SMD platinum thin film thermal sensors
- T.C.R. is in accordance to JIS-IEC standards
- Suitable for temperature control in various industrial equipment
- Suitable for both flow and reflow solderings
- Products meet EU RoHS requirements

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 140.40Ω. The value for 500Ω at 0°C will be the value obtained by multiplying the resistance value in this table by 5.

Performance Characteristics

platinum thin film thermal chip sensors (for automotive)

features

- SMD platinum thin film thermal sensors
- T.C.R. is in accordance to JIS IEC standards
- Suitable for both flow and reflow solderings
- Products meet EU RoHS requirements
- AEC-Q200 Qualified

applications and ratings

Part Designation	Resistance @ 0°C	Resistor Tolerance	Thermal Time Constant ¹	Thermal Dissipation Constant ¹	T.C.R. (ppm/°C) ²	T.C.R. Tolerance (ppm/°C)	Specified Current ³	Operating Temperature Range
SDT73V 2B	100Ω 500Ω	C: ±0.2% F: ±1%	6.5 seconds	2.4mW/°C	3850	±50	1mA Max.: 100Ω 0.1mA Max.: 500Ω	-55°C to +155°C

¹ Thermal time constant and thermal dissipation constant are reference values, which are values of elements and vary with connecting or fixing methods. Thermal dissipation constant is approx. 4mW/°C under the surface mounting condition.

² T.C.R. measuring temperature: 0°C/+ 100°C

³ The electricity which it is charged with in the element is moved to the range that rise in temperature due to a self-heat generation can be ignored. Ordinarily recommended measuring currents are 1mA for 100Ω and 0.1mA for 500Ω.

For further information on packaging, please refer to Appendix A.

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

Mechanical Shock	±0.5%	-0.001%	100gs Maximum, 6Dms (Standard), 12.3 feet/second
Vibration	±0.5%	-0.009%	Test from 10-2000Hz, 5g's for 20 minutes, 12 cycles each of 3 orientations

NEW

features

- Electrode structure suitable for Al wire bonding of thick lines (Max. $\phi 300\mu\text{m}$)
- Soldering and sintering can be mounted by metallization on the back side
- Products meet EU RoHS requirements
- AEC-Q200 Qualified

200	1758.6	—	—	—	—	—	—	—	—	—

Note:

Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 1404.0 Ω.

Performance Characteristics

Parameter	Requirement Δ R± (%)		Test Method
	Limit	Typical	
Resistance	Within specified tolerance	—	0°C
T.C.R.	Within specified tolerance	—	0°C/100°C
Rapid Change of Temperature	0.3	-0.014	-55°C (30 minutes) / +200°C (30 minutes), 1000 cycles
Moisture Resistance	0.3	0.021	85°C ± 2°C, 85% RH, 1000 hours; 2 mA continuous current
High Temperature Load Life	0.3	0.018	200°C, 1000 hours, 2 mA continuous turning on electricity
High Temperature Exposure	0.3	0.014	200°C, 1000 hours
Low Temperature Exposure	0.3	0.008	-55°C, 1000 hours

features

- SDT101SA is ultra-compact sensor element and offers 1kΩ
- Simple structure for lead forming
- STD101A and SDT101SA can be easily soldered
- Ideal for low directivity heat flow sensor elements
- Products meet EU RoHS requirements
- AEC-Q200 Qualified¹ (SDT101B 500Ω, SDT101SA)

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 136.72Ω. The value for 500Ω at 0°C will be the value obtained by multiplying the resistance value in this table by 5. Similarly, the value for 10Ω at 0°C will be the value obtained by dividing the resistance value by 10 and the value for 1kΩ at 0°C will be value obtained by multiplying the resistance value by 10.

Performance Characteristics

Parameter	Requirement $\Delta R \pm(\%+0.05\Omega)$		Test Method
	Limit	Typical	
Resistance	Within specified tolerance	—	0°C
T.C.R.	Within specified T.C.R.	—	0°C/ +100°C
Overload (Short Time)	±0.5%	±0.2%	Rated voltage x 2.5 for 5 seconds
Resistance to Solder Heat (SDT101A)	±0.3%	±0.1%	350°C, 1 second (SDT101A/SA)
Rapid Change of Temperature	±0.5%	±0.2%	-55°C (30 minutes)/ +25°C (10 minutes)/ +150°C (30 minutes)/ +25°C (10 minutes), 5 cycles
Moisture Resistance	±1%	±0.3%	80°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
Endurance at 70°C	±1%	±0.2%	70°C ± 3°C (SDT101A/SA), 200°C ± 3°C (SDT101B), 1000 hours, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Exposure	±1%	±0.7%	+150°C (SDT101A/SA), +300°C (SDT101B), 1000 hours
Shelf Life	±0.3%	±0.1%	Left for 1 year on shelf in natural condition

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

features

- T.C.R. is in accordance to JIS-IEC standards
- The small package with a real ability of 1kΩ resistance
- Thermal time constant is improved with the small package
- Products meet EU RoHS requirements. EU RoHS regulation is not intended for Pb-glass contained in glass.

¹ [t] is a measuring temperature indicated at -C that is not related to marking + -.

² T.C.R. measuring temperature: 0°C/+100°C.

³ Thermal time constant and thermal dissipation constant are values measured in stationary air and are typical values, which are values of elements and vary with connecting or fixing methods.

⁴ The electricity which it is charged with in the element is moved to the range that rise in temperature due to a self-heat generation can be ignored. Recommended measuring currents are 1mA for 100Ω and 0.1mA for 500Ω or 1kΩ. SDT310AP can be used as hot-film sensor. Maximum specified current is 100mA when using under self-heating condition.

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 140.40Ω. The value for 500Ω at 0°C will be the value obtained by multiplying the resistance value in this table by 5. Similarly, the value for 1KΩ at 0°C will be the value obtained by multiplying the resistance value by 10.

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes. When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 140.40Ω. The value for 500Ω at 0°C will be the value obtained by multiplying the resistance value in this table by 5. Similarly, the value for 1KΩ at 0°C will be the value obtained by multiplying the resistance value by 10.

Performance Characteristics

Parameter	Requirement Δ R (%+0.05Ω)		Test Method
	Limit	Typical	
Resistance	Within specified tolerance	—	0°C
T.C.R.	Within specified T.C.R.	—	0°C/ +100°C
Insulation Resistance	100MΩ or more	—	d.c. 100V
Dielectric Withstanding Voltage	±0.12%	±0.010%	a.c. 100V, 60 seconds - 70 seconds
Resistance to Solder Heat	±0.5%	±0.014%	350°C for 3.5 seconds
Rapid Change of Temperature	±0.12%	-0.026%	-55°C (30 minutes)/ +25°C (2 - 3 minutes)/ +155°C (30 minutes)/ +25°C (2 - 3 minutes), 10 cycles (SDT310LTC, SDT310HLTC); -55°C (30 minutes)/ +25°C (2 - 3 minutes)/ +400°C (30 minutes)/ +25°C (2 - 3 minutes), 10 cycles (SDT310P, SDT310A); +25°C (30 minutes)/ +650°C (30 minutes) 10 cycles (SDT310MTM)
Moisture Resistance	±0.5%	-0.004%	60°C ± 2°C, 90 - 95% RH, 1000 hours, 1mA, 1.5 hr ON, 0.5 hr OFF cycle
Normal Temperature Load Life	±0.5%	-0.017%	20°C ± 10°C, 1000 hours, 1mA continuous turning on electricity
High Temperature Load Life	±0.5%	-0.022%	155°C ± 2°C (SDT310LTC, SDT310HLTC), 400°C ± 8°C (SDT310P, SDT310AP), 1000 hours, 650°C ± 13°C (SDT310MTM), 250 hours, 1mA continuous turning on electricity
High Temperature Exposure	±0.12%, ±0.5% (SDT310MTM)	-0.027%, -0.060% (SDT310MTM)	+155°C (SDT310LTC, SDT310HLTC), +400°C (SDT310P, SDT310AP), +650°C (SDT310MTM), 250 hours
Low Temperature Exposure	±0.12%	-0.036%	-55°C, 250 hours

features

- Characteristics are equivalent with IEC 60751⁻²⁰⁰⁸, JISC 1604⁻²⁰¹³
- Small package of 1.2mm x 3mm with 100Ω resistance
- Products meet RoHS requirements. RoHS regulation is not intended for Pb-glass contained in glass.

dimensions and construction

Type	Dimensions inches (mm)

¹ [t] is a measuring temperature indicated at °C that is not related to marking + · -.

² T.C.R. Measuring Temperature : 0°C/+100°C.

³ Thermal time constant is value measured in stationary air and is typical value, which is value of element and vary with connecting or fixing methods.

⁴ Self-heating coefficient expressed in °C/mW is values measured at temperature : 0°C in flowing oil with a velocity >0.2m/s, which is value of elements and vary with connecting or fixing methods.

⁵ Specified current is a current value that is used at reliability test under the condition of self heat-generation that can be disregarded. Recommended measuring currents 1mA for 100Ω.

environmental applications

Temperature Characteristics

Approximate Expression for Resistance-Temperature Characteristics
 -55°C~0°C : $R_T = R_0 \{1 + C_1 T + C_2 T^2 + C_3 (T-100) T^3\}$
 0°C~+400°C : $R_T = R_0 (1 + C_1 T + C_2 T^2)$

R_T : Resistance value at T°C
 R_0 : Resistance value at 0°C
 T : Ambient temperature(°C)
 Constants C_1, C_2, C_3 :
 $C_1 = 3.908 \times 10^{-3} \text{ } ^\circ\text{C}^{-1}$
 $C_2 = -5.775 \times 10^{-7} \text{ } ^\circ\text{C}^{-2}$
 $C_3 = -4.183 \times 10^{-12} \text{ } ^\circ\text{C}^{-4}$

Note: Desired temperature values are obtained by adding temperatures in the vertical and horizontal axes.
 When calculating a resistance value of 105°C, read the value in the column where 100°C in the vertical axis and 5°C in the horizontal axis cross. The value will be 140.40Ω.

environmental applications (continued)

Performance Characteristics

Parameter	Requirement $\Delta R \pm(\%)$		Test Method
	Limit	Typical	
Resistance	Within specified tolerance	—	0°C
T.C.R.	Within specified T.C.R.	—	0°C/ +100°C
Insulation Resistance	100M Ω or more	—	d.c. 100V
Dielectric Withstanding Voltage	$\pm 0.06\%$	-0.003%	a.c. 100V, 60 seconds - 70 seconds
Rapid Change of Temperature	± 0.06 (F0.15 at 300°C) ± 0.12 (F0.3 at 400°C)	-0.002% +0.013%	-55°C (30 minutes)/ +25°C (2 - 3 minutes)/ +300°C or +400°C (30 minutes)/ +25°C (2 - 3 minutes), 10 cycles
Moisture Resistance	$\pm 0.06\%$	-0.002%	60°C \pm 2°C, 90 - 95% RH, 1000 hours, 1mA, 1.5 hr ON, 0.5 hr OFF cycle
High Temperature Load Life	± 0.06 (F0.15 at 300°C) ± 0.12 (F0.3 at 400°C)	-0.016% -0.022%	300°C or 400°C, 1000 hours, 1mA continuous turning on electricity
High Temperature Exposure	± 0.06 (F0.15 at 300°C) ± 0.12 (F0.3 at 400°C)	+0.004% +0.014%	+300°C or +400°C, 1000 hours
Low Temperature Exposure	$\pm 0.06\%$	+0.010%	-55°C, 1000 hours

features

- Achieves a thermal time constant of 2.8-seconds due to volume reduction
- Excellent heat-resistance
- Applies axial lead type suitable to use as heater element
- Products with lead-free terminations meet EU RoHS requirements
- AEC-Q200 Qualified¹

applications and ratings

Part Designation	Resistance (Ω at 0°C)	Resistance Tolerance (%)	T.C.R. x 10 ⁻⁶ /K ²	Thermal Time Constant ³ (s)	Maximum Current (mA)	Power Rating (mW)	Operating Temperature Range ⁴
SDT310VASP2	20Ω	±1%	3850±40	2.8	76	0.336	-55°C to +600°C

² T.C.R. measuring temperature: 0°C/+100°C.

³ Thermal time constant is value measured in stationary air and is typical value, which are values of elements and vary with connecting or fixing methods.

⁴ Temperature of the device including a self-heating.

Derating Curve

For sensors operated at an element part temperature of 25°C or above, a power rating shall be derated in accordance with the above derating curve.

environmental applications

Temperature Characteristics

Approximate Expression for Resistance-Temperature Characteristics
 -55°C~0°C : $R_T = R_0 \{1 + C_1 T + C_2 T^2 + C_3 (T-100) T^3\}$
 0°C~+400°C : $R_T = R_0 (1 + C_1 T + C_2 T^2)$

R_T : Resistance value at T°C
 R_0 : Resistance value at 0°C
 T : Ambient temperature(°C)
 Constants C_1, C_2, C_3 :
 $C_1 = 3.908 \times 10^{-3} \text{ } ^\circ\text{C}^{-1}$
 $C_2 = -5.775 \times 10^{-7} \text{ } ^\circ\text{C}^{-2}$
 $C_3 = -4.183 \times 10^{-12} \text{ } ^\circ\text{C}^{-4}$

thermal sensors

guarantee of product

The guaranteed term of the product is one year after delivery. However, when trouble occurs during the guaranteed term because of our responsibility, the product is exchanged or is repaired. We guarantee the product itself, any damages caused by this product shall be excused.

features

- Thin film thermal sensors of SMD type
- Resistance tolerance $\pm 1\%$, a wide range of TCRs $+3000 \times 10^{-6}/K \sim +5000 \times 10^{-6}/K$ with the standard products
- Suitable for control of temperatures in various industrial equipment
- Suitable for both flow and reflow soldering
- Products with lead-free terminations meet EU RoHS and China RoHS requirements

5000	0.886014	0.00437224	7.48809 x 10 ⁻⁶

(Values are not guaranteed but typical)

$$R_T = R_{25} (C_0 + C_1 T + C_2 T^2)$$

R_T: Resistance value at T°C
R₂₅: Resistance value at 25°C
T: Ambient temperature (°C)
C₀, C₁, C₂: Constants

Performance Characteristics

Parameter	Requirement Δ R ±(%+0.05Ω)		Test Method
	Limit	Typical	
Resistance	Within regulated tolerance	—	25°C
T.C.R.	Within specified T.C.R.	—	+25°C/+65°C
Overload	±0.5%	±0.3%	Rated voltage x 2.5 for 5 seconds
Resistance to Solder Heat	±0.5%	±0.3%	260°C ± 5°C, 10 seconds + 1 second/- 0 second
Rapid Change of Temperature	±0.5%	±0.3%	-55°C (30 minutes), +25°C (2-3 minutes), +125°C (30 minutes), +25°C (2-3 minutes), 5 cycles
Moisture Resistance	±2.0%	±1.5%	40°C ± 2°C, 90 - 95% RH, 1000 hours, 1.5 hours ON, 0.5 hours OFF cycle
Endurance at 70°C	±2.0%	±1.5%	70°C ± 2°C, 1000 hours, 1.5 hours ON, 0.5 hours OFF cycle

Confirming resistance drift is recommended since this product has a tendency to have bigger resistance change than general flat chip over 70°C. Please pay attention not to be applied ESD, it may cause of resistance change.

Actual Value (Out of Guarantee)

Test Items	Reference	Test Method

Performance Characteristics

Parameters	Performance Requirements $\Delta R \pm (\% + 0.05\Omega)$		Test Methods
	Limit	Typical	
Resistance	Within specified tolerance	-	25°C
T.C.R.	Within specified T.C.R.	-	+25°C/+75°C
Overload (Short Time)	1%	0.02%	Rated voltage x 2.5 or Max. overload Vol., whichever is lower, for 5 seconds
Resistance to Soldering Heat	1%	0.10%	260°C ± 5°C, 10 seconds ± 1 second
Rapid Change of Temperature	2% : TCR ≤ +3300 5% : TCR ≥ +3600	0.53% 2.59%	-55°C (30min.)/+155°C (30min.), 1000 cycles
Moisture Resistance	3%	0.15%	85°C ± 2°C, 85% ± 5% RH, 1/10 rated power, 1.5h ON/0.5h OFF cycle. 1000 hours
Endurance at 85°C	2% : TCR ≤ +3300 5% : TCR ≥ +3600	0.30% 0.76%	85°C ± 2°C, 1000 hours 1.5h ON/0.5h OFF cycle.
High Temperature Load Life	2% : TCR ≤ +3300 5% : TCR ≥ +3600	0.40% 2.17%	125°C, Rated voltage, 1000 hours
High temperature Exposure	2% : TCR ≤ +3300 5% : TCR ≥ +3600	0.81% 3.20%	155°C, 1000h
Low Temperature Exposure	2%	-0.10%	-55°C, 1000h

Please pay attention not to be applied ESD, it may cause of resistance change.

Actual Value (Out of guarantee)

Test Items	Reference	Test Methods
ESD	500V	Human Body Model, 100pF, 1.5kΩ

Precautions for the Inductors

Refer to the precautions of common matters for all products in the beginning of this catalog for the matters common to all products.

Inductors in General

- Characteristics such as the inductance, Q value etc. are frequency dependent.
- The stress from resin coating and molding can result in change of inductance.
- Since the inductors use ceramic materials, chipping and cracking can occur. Please be careful when handling. Excessive vibration and impact could destroy the parts.
- Keep magnetic tweezers and other magnets away from the inductors to avoid change of inductance caused by magnetization. Do not press the wire wound part of the chip inductor with sharp objects.
- The inductance could decrease according to magnetic saturation when the inductor is used exceeding the allowable current. There is also a possibility of disconnection and short-circuit or emitting smoke and ignition caused by the heat generation of the inductor.
- There is a risk of disconnection when excessive current (inrush current) is applied. Change of the characteristics may occur by the magnetization of the core when excessive current is applied to a DC circuit.
- When the parts are used at high-frequency, the heat generation will be larger and the part temperature will be higher compared with DC or low-frequency. This is caused by increasing iron loss and copper loss. Please be careful not to exceed the operating temperature rise by high frequency.

Ex. Temperature rise by high frequency

- The electrical characteristics change from the variation of frequency of the parts. When the part is used above the frequency band of the SRF (self-resonant frequency), it will function as a capacitor. Please do not use the parts above the SRF.

L-Frequency Characteristics

Mounting

- Some of the inductors have magnetic polarity to which attention should be paid when mounting.
- The inductance and Q values of a non-magnetically-shielded inductor could change from magnetic coupling affected by other components, chassis, patterns, etc. When mounting in high density, check the characteristic in advance with the actual equipment. Additionally, take care of the positioning of the components since closely mounted inductors may cause magnetic coupling. Do not place large magnetic materials like audio speakers, etc. near the inductors.
- Do not expose the inductors to the heat radiation from other high temperature parts.

Reference

- For basic precautions, please refer to the Technical report of JEITA RCR-2501C Safety application guide for inductors for use in electronic equipment.

Terms and Definitions

Nominal Inductance

- Inductance that the inductor is designed to have and generally indicated on the body.

Q Value (Quality factor)

- A coefficient that shows the quality of the inductors. It is calculated from the following formula shown below.

$$Q = \frac{\omega L}{R}$$

ω = Angular Frequency ($\omega=2\pi f$)
 L = Inductance
 R = Resistance

Self-Resonant Frequency

- Frequency that resonance occurs by the distribution capacity and inductance of the inductor.

DC Resistance Value

- Resistance value at DC.

Allowable DC Current

- Upper limit of the current which is set to assure the safe use of the inductor.
- It is defined as the smaller DC current value of either the DC superposition or the surface temperature rise characteristics.
- DC superposition characteristic is a phenomenon which occurs when the inductors, made with magnetic materials such as ferrite, have a large DC current applied. When this occurs, the inductance drops because of the magnetic saturation.
- The plot below shows the relationship between the DC superposition and the surface temperature rise.

Iron Loss

- Electrical energy that is lost when the wire wound magnetic material is magnetized by the applied AC. It is calculated by the sum of hysteretic loss and eddy-current loss.

Copper Loss

- Energy that is transformed into Joule heat by the resistance of the wound wire. The Copper loss increases in the high frequency band from the skin effect.

features

- Designed to reduce noise at high frequencies
- Standard EIA packages: 1E, 1J, 2A, 2B
- Nickel barrier with solder overcoat for excellent solderability
- Marking: Black body color with no marking
- Products with lead-free terminations meet EU RoHS requirements

Precautions for the Fusing Components

Refer to the precautions in the beginning part of this catalog for the matters common to all products.

Safety Standards

- KOA's fuse components comply with the following safety standards:
 - U.S.A. UL (Underwriters Laboratories Inc.) UL248
 - CANADA CSA (Canadian Standards Association) C22.2 No.248
c-UL (Underwriters Laboratories Inc.) UL248
*c-UL is equivalent to CSA in recognition
 - INTERNATIONAL IEC (International Electrotechnical Commission) 60127-1, -4
 - JAPAN Electrical Appliances and Materials Safety Act (PSE) Class-B

Rated Current

- Specified amperage that conforms to safety standards, such as fusing time. This is not to be confused with the steady-state (stationary) current, which is calculated using the following equation:

$$\text{Stationary Current} \leq \text{Rated Current} \times \text{Stationary Derating Coefficient} \times \text{Ambient Temperature Derating}$$
 The table below indicates deratings for each type of products.

Type	Stationary Derating Coefficient
CCF1N, CCF1F	0.7
TF16AT	0.75
TF10BN, TF16SN, TF16VN	1.0

Deratings for Ambient Temperatures

The following Deratings for Ambient Temperatures are required:

- If the current waveform is a repeated pulse or AC waveform, the peak current shall be both the rated current and stationary current. Do not use the effective value of the current waveform.

Rated Voltage

- A rated voltage indicates the voltage that does not run through electrodes after the fuse blows. In case of exceeding the rated voltage, the circuit voltage should be applied at voltage not higher than the rated voltage because the current may run again or may break the elements.

Interrupting Capacity

- Maximum current and voltage that can be interrupted when an abnormal situation arises. Make sure beforehand that voltage and current at the time of abnormality occurring in the circuit are within the interrupting capacity.

Type	Fusing Current	Fusing Time
CCF1N (0.4~10)	Rated Current x 2 or Over	1 second
TF16SN	Rated Current x 2 or Over	1 second
TF10BN	Rated Current x 2 or Over	5 seconds
TF16AT	Rated Current x 2 or Over	5 seconds
TF16VN	Rated Current x 2.5 or Over	5 seconds
CCF1N (12~30)	Rated Current x 2 or Over	60 seconds
CCF1F	Rated Current x 2 or Over	60 seconds

Fusing Current

- Minimum current needed to break fusing element. Refer to the following list to quickly interrupt if an abnormal current occurred in the circuit:
 - If fusing time is within 1 second, the variance in the fusing time is largely affected by the surroundings (temperature, mounting pad dimensions, substrate material, etc.). If the fusing time is not less than 1 second, the verification should be made with an actual circuit.

Anti-Surge Characteristics

Be careful of the short time over current (inrush current, reversible current at motor-lock etc.) that is generated in the circuit.

- Inrush current will differ according to the ambient temperature and the charging/discharging condition of the capacitor etc. Check the current wave form with the condition which will be the maximum current.
- When components that are highly dependent on temperatures such as thermistors are used within the circuit, check the current wave form with the condition which will be the maximum current.
- Set the sampling frequency at a level which the peak current can be detected when measuring the surge current with a digital oscilloscope.
- Generally, current probes are used for current measurement. When shunt resistors are used, be sure to use the lowest resistance value as possible according to the impedance in the circuit.

Operation Check

- Before you decide which fuse product you use, please mount the selected fuse on actual device and confirm that rush current and surge current have enough margin and that the product has performance that enables it to interrupt the abnormal current quickly.

Soldering

- This product is suitable both for reflow-soldering and for flowsoldering, but excessive heat may cause an open-circuit and change its characteristics.
- The part shall be soldered at the maximum temperature of 260°C or less.
- If a soldering iron is used, it shall be at 350°C or less and should be soldered in a short time. Further, pay attention that the products are not touched directly by the top of the iron. It may cause disconnection or characteristic change.

Placement

- Please confirm sufficiently the evaluation of reliability and use those that have small contractile stress at a resin stiffening time. By contractile stress at the resin stiffening time, fuses might be broken, resistance value may be changed and disconnection might occur in case of resin coating/potting or molded sealing. There is a possibility that heat may fill the surrounding of the fuses by shielding and may cause the fusing characteristics to change so, please check with the actual circuit.
- The fusing characteristics may change when there are components that generate heat around the fuses. Keep fuses away from those parts.

Storage

- Avoid storing components under the condition of high temperature/high humidity (40°C/70%RH or more) which may deteriorate solderability.
- Also avoid direct sun light which may deteriorate solderability and induce changes in taping strength.se parts.

Parts Selection

- If you have any questions about fuse selection, please do not hesitate contacting us.

Reference

- For basic precautions, refer to JEITA technical report "JEITA RCR-4800 Safety application guide on fuse for use in electronic and electrical equipment".

features

- Stable fusing characteristics due to original technology
- Suitable for reflow and flow soldering
- Products meet EU RoHS requirements
- Excellent anti-sulfuration characteristics due to using high sulfuration-proof material

environmental applications

Derating Curve

Stationary Current: Regard the peak of stationary current waveform as stationary current value when the stationary current is repeated pulse. Normal derating of this product should be 0.7max. as standards.

Deratings by ambient temperatures. When using the products at the temperatures other than normal temperature (25°C ± 5°), temperature adjustment will be required. Please refer the derating coefficient as shown in the figure.

Fusing Characteristics

Performance Characteristics

Parameter	Requirements		Test Method
	Limit	Typical	
Fusing Characteristics	Within specified time. Insulation resistance shall not be less than 0.1MΩ	—	Fusing time measured under rated current x 200%) (at 25°C)
Surface Temperature Rise	Maximum temperature rise 75°C and not fusing (all the rating)	—	Surface temperature should be measured by 1.00N
Bending Test	No mechanical damage	—	Distance between holding points 90mm, bent by 3mm at rate of 1mm/second
Resistance to Soldering Heat	ΔR±10%	±3%	260°C ± 5°C, 10 seconds ± 0.5 seconds
Solderability	95% coverage minimum	—	235°C ± 5°C, 3 seconds ± 0.5 seconds
Load Life	ΔR±10%	±5%	70°C ± 2°C, 1000 hours, rated current x 70%, 1.5 hr ON, 0.5 hr OFF cycle
Load Life Moisture	ΔR±10%	±5%	40°C ± 2°C, 90 - 95% RH, 1000 hours, rated current x 70%, 1.5 hr ON, 0.5 hr OFF cycle
Rapid Change of Temperature	ΔR±10%	±5%	-55°C (30 minutes), +125°C (30 minutes), 100 cycles
Sulfuration Test	ΔR±10%	—	Soaked in industrial oil with 3.5% sulfur concentration, 105°C±3°C, 500 hours

circuit protection

features

- Surface mount fuse suitable for primary and secondary circuits
- Ceramic case provides excellent mechanical strength
- Suitable for flow and reflow soldering
- Stable fusing characteristics due to the original technology
- Excellent anti-surge characteristics
- Products with lead-free terminations meet EU RoHS requirements

environmental applications

Deratings

- Stationary current
Regard the peak of stationary current waveform as stationary current value when the stationary current is repeated pulse.
- Normal derating
Normal derating of this product should be 0.7max. as standards.
- Deratings by ambient temperatures
When using the products at the temperatures other than normal temperature (25°C ±5°C), temperature adjustment will be required. Please refer to the derating coefficient as shown in the figure.

Fusing Characteristics

Performance Characteristics

Parameter	Requirement Δ R±%		Test Method
	Limit	Typical	
Fusing Characteristics	Within specified time. Insulation resistance shall not be less than 0.2MΩ	—	Fusing time measured under rated current x 160% and x 200%. (at 25°C)
Surface Temperature Rise	Max. Temp. Rise 140°C (For PSE)	—	Surface temperature should be measured by rated current x 115%
	Max. Temp. Rise 75°C (For UL)	—	Surface temperature should be measured by rated current x 100%
Bending Test	No mechanical damages	—	Distance between holding points 90mm, bent by 3mm at rate of 1mm/s
Resistance to Soldering Heat	±10%	±3%	260°C ±5°C, 10 seconds ± 0.5 seconds
Solderability	±95% coverage min.	—	235°C ±5°C, 3 seconds ± 0.5 seconds
Load Life	±10%	±5%	70°C ± 2°C, 1000 hours, rated current x 70%, 1.5 hr ON, 0.5 hr OFF cycle
Load Life Moisture	±10%	±5%	40°C ± 2°C, 90 - 95% RH, 1000 hours, rated current x 70%, 1.5 hr ON, 0.5 hr OFF cycle
Rapid Change of Temperature	±10%	±5%	-55°C (30 minutes), +125°C (30 minutes), 100 cycles

features

- Small, lightweight design
- Special manufacturing method stabilizing fusing characteristics and occupying less area
- Low power consumption and less voltage drop due to low internal resistance
- Suitable for overcurrent protection of circuit block in electronic devices
- Suitable for flow and reflow soldering
- Products meet EU RoHS requirements

Residual Resistance	10kΩ or more	—	Measure DC resistance after fusing

circuit protection

Specifications given herein may be changed at any time without prior notice. Please confirm technical specifications before you order and/or use.

Precautions for the Varistors

The reliability of the metal oxide varistors are dependant on the ways of their use and could lead to accidents so please be aware.

Selection and Protection

- It is recommended that the steady-state circuit voltage which remains at 80% or less of the max. allowable circuit voltage. Exceeding the specification will cause deterioration, short-circuits, etc.
- Select proper parts according to the surge energy and the number of the impressions if the varistors are used to absorb the surge for an inductive loading.
- The rated surge endurance is defined in terms of shock wave current waveform (starting up 8 μ s/wave-tail length 20 μ s).
- Insert fuses or thermal fuses in series with varistors if the size of the surge power cannot be estimated, in order to prevent varistors from bursting due to an excessive surge over the rating.
- Give consideration on the layout to combustible materials and to take measurements on the circuits (fuses or thermal fuses) since there may be smoking or flaming if the varistor short-circuits due to an excessive surge over the rating.
- Upon mold sealing, fully confirm the reliability and use the resin which has small contractile stress at stiffening since the protection coat may peel off, cracks may occur at the solder connection, and the characteristics of the varistor may change.
- Perform the withstand voltage test and the insulation resistance test with the varistors removed from the circuit since the test voltage may exceed the varistor voltage.

Failure Mode

- Varistor voltage will drop and the leakage current will increase when excessive surge which is above the rating is applied to the varistor. Temperature will increase due to Joule heating as the leakage current increases, which will cause thermal runaway and short circuit.

Reference

- For basic precautions, please refer to the technical report of EMAJ-R039 Safety application guide for varistors.

Terms and Definitions

Maximum Allowable Circuit Voltage

- The maximum commercial frequency sinusoidal voltage effective value or maximum D.C. voltage or A.C. voltage (rms) that can be continuously applied.

Maximum Energy (E)

- The maximum energy within the varistor voltage change rate of $\pm 10\%$ when a single impulse of 2ms is applied.

Maximum Peak Current (Ip)

- The maximum peak current within the varistor voltage change rate of $\pm 10\%$, when a single standard impulse of 8/20 μ s is applied.

Operating Temperature (Topt)

- The allowable ambient temperature range while the device is operating.

Storage Temperature (Tstg)

- The temperature range in which the elements do not deteriorate.

Varistor Voltage (Vc)

- The terminal voltages on both ends of the varistor when the specified current is applied.

Clamping Voltage (Vp)

- The peak value of the voltage between two terminals of the varistor when the specified standard waveform impulse current (8/20 μ s) is applied.

Recommended value of varistor voltage for the power supply voltage

Voltage of Power Line	Varistor Voltage
3.3V d.c.	8.2V
5V d.c.	8.2V, 12V
12V d.c.	24V, 27V
24V d.c.	47V, 56V
48V d.c.	82V, 100V

features

- Varistors own two-way symmetries and can absorb positive and negative surges
- Multilayer construction allows its small size to absorb a large surge
- Small space and high density mounting available due to the small package
- Suitable for both flow and reflow solderings
- Products with lead free termination meet EU RoHS requirements

environmental applications

Performance Characteristics

Parameter	Requirement Δ V±%	Test Method
Varistor Voltage	Within specified tolerance	Voltage between terminals when 1mA is flowed
Solderability	95% coverage minimum	230°C ± 5°C, 4 seconds ± 1 second
Resistance to Solder Heat	±10%	270°C ± 5°C, 3 seconds ± 0.5 second
Rapid Change of Temperature	±10%	-40°C (30 minutes), +125°C (30 minutes), 30 cycles
Maximum Peak Current	±10%	A single standard impulse of 8/20μ seconds, positive/negative applied once each
Maximum Energy	±10%	A single standard impulse of 2ms, once
High Temperature Life with d.c. Bias	±10%	85°C ± 5°C, 1000h, Load: Maximum allowable circuit voltage (d.c.)
High Temperature Life with a.c. Bias**	±10%	85°C ± 5°C, 1000h, Load: Maximum allowable circuit voltage (V _{a.c.r.m.s.})
High Temperature & High Humidity Life with d.c. Bias	±10%	40°C ± 5°C, 95% RH, 500h, Load: Maximum allowable voltage (d.c.)
High Temperature Storage Life	±10%	125°C ± 5°C, 1000h
Low Temperature Storage Life	±10%	-40°C ± 5°C, 1000h

features

- SMD type metal oxide varistors
- Ideal for countermeasures against ESD (Conforming to IEC61000-4-2)
- Symmetrical non-linearity V-I characteristics absorb positive and negative surge
- High maximum energy type
- Low leakage current
- High resistance to cyclic temperature stress
- Suitable for both flow and reflow soldering
- Products meet EU RoHS requirements
- AEC-Q200 Qualified

environmental applications

Voltage Current Curves (Ta = +25°C)

Performance Characteristics

Parameter	Requirement $\Delta V_{1mA} \pm \%$	Test Method
Varistor Voltage	Within specified tolerance	Voltage between terminals when 1mA and 10mA are flowed
Solderability	95% coverage minimum	230°C \pm 5°C, 5 seconds \pm 0.5 second
Resistance to Solder Heat	$\pm 10\%$	260°C \pm 5°C, 10 seconds \pm 0.5 second
Rapid Change of Temperature	$\pm 10\%$	-40°C (30 minutes) / +125°C (30 minutes), 1000 cycles
Short-Time Applied Voltage	$\pm 10\%$	Maximum value of D.C. voltage that can be applied for a short period of time (5 min.)
Maximum Peak Current	$\pm 10\%$	A single standard impulse current of 8/20 μ seconds is applied
Maximum Energy	$\pm 10\%$	A single standard impulse of 2m second, once
Electrostatic Discharge	$\pm 10\%$	25kV (Non contact) (NV73DL1J12, NV73DL2A12: 15kV (Non contact))
Vibration Resistance	No visible damage. No remarkable mechanical damage	Vibration frequency: 10Hz~2000Hz; Full amplitude: 1.5mm, 10Hz~2000Hz~10Hz 20 min. XYZ direction 4 hrs for each total 12 hrs
High Temperature Life with d.c. Bias	$\pm 10\%$	125°C \pm 2°C, 1000h, Applied voltage: Varistor voltage (V _{1mA}) x 0.85
High Temperature & High Humidity Life with Bias	$\pm 10\%$	85°C \pm 2°C, 85% RH, 1000h, Applied voltage: Varistor voltage (V _{1mA}) x 0.85
Thermal Shock	$\pm 10\%$	-55°C (15 min.) / +125°C (15 min.) 300 cycles
Shock	$\pm 10\%$	Half sine wave, Applied time: 1m second, Applied cycle: 500m/s ² , 5 cycles
High Temperature Storage	$\pm 10\%$	150°C, 1000h
Low Temperature Storage	$\pm 10\%$	-40°C, 1000h

circuit protection

features

- Varistors own two-way symmetries and can absorb positive and negative surges
- Multilayer construction allows its small size to absorb a large surge
- Small space and high density mounting available due to the small package
- Suitable for both flow and reflow solderings
- Products meet EU RoHS requirements
- AEC-Q200 Qualified

Voltage Current Curves (Reference) (Ta = +25°C)

Performance Characteristics

Parameter	Requirement $\Delta V \pm \%$	Test Method
Varistor Voltage	Within specified tolerance	Voltage between terminals when 1mA is flowed
Clamping Voltage	Individual Vp or less	Voltage between terminals when a single standard impulse current of 8/20 μ s is applied. 2E: 2.5A 2J: 5A 2L: 10A 2LH: 100A
Resistance to Solder Heat	$\pm 10\%$	260°C $\pm 5^\circ\text{C}$, 10 seconds ± 0.5 second
Solderability	95% coverage minimum	230°C $\pm 5^\circ\text{C}$, 5 seconds ± 0.5 second
Rapid Change of Temperature	$\pm 10\%$ No mechanical damage (Cracks in solder fillets are not covered by warranty.)	-40°C (30 minutes)/ +125°C (30 minutes), 1000 cycles
Maximum Peak Current	$\pm 10\%$	A single standard impulse current of 8/20 μ seconds is applied
Maximum Energy	$\pm 10\%$	A single standard impulse of 2m second, once
Electrostatic Discharge	$\pm 10\%$	25kV (Non contact)
Vibration Resistance	No visible damage. No remarkable mechanical damage	Vibration frequency: 10Hz~2000Hz; Full amplitude: 1.5mm, 10Hz~2000Hz~10Hz 20 min. XYZ direction 4 hrs for each total 12 hrs
High Temperature Life with d.c. Bias	$\pm 10\%$	125°C $\pm 2^\circ\text{C}$, 1000h, Applied voltage: Varistor voltage (V _{1ma}) x 0.85
High Temperature & High Humidity Life with Bias	$\pm 10\%$	85°C $\pm 2^\circ\text{C}$, 85% $\pm 3\%$ RH, 1000h, Applied voltage: Varistor voltage (V _{1ma}) x 0.85
Thermal Shock	$\pm 10\%$ No mechanical damage (Cracks in solder fillets are not covered by warranty.)	-55°C (15 min.)/ +125°C (15 min.) 300 cycles
Shock	$\pm 10\%$ No mechanical damage	Half sine wave, Applied time: 1m second, Applied cycle: 500m/s ² , 5 cycles
High Temperature Storage Life	$\pm 10\%$	150°C $\pm 5^\circ\text{C}$, 1000h
Low Temperature Storage Life	$\pm 10\%$	-50°C $\pm 5^\circ\text{C}$, 1000h

features

- Adjustment processes are decreased by function and ratio trimmings
- Various types of package are available
- High reliability achieved by KOAs original thick film technology

construction

ordering information

New Part #	KLC	AB1
	Type	KOA Ref. Number

features

- Suitable for bare chip mounting as it has thermal expansion coefficient close to that of silicon and excellent dimensional accuracy and flatness.
- Excellent high frequency characteristics are achieved by the low-loss dielectric ceramic and the low-loss conductor.
- Downsizing and high integration density can be achieved by the multilayer wiring, the multi-cavity structure and the surface/buried resistor printing.
- The substrate and the cavity can be formed in round, polygonal, concave or convex shape.
- Thermal vias can be placed in the bare chip mounting area to improve the thermal conductivity of the substrate.
- The use of ceramic material contribute to the excellent heat and humidity resistance and prevents outgas and dust generation.
- Products meet EU RoHS requirements

what is LTCC ?

LTCC stands for Low Temperature Co-fired Ceramics.

LTCCs are multilayer ceramic substrates that can be fired simultaneously with low-resistance conductors since the glass-based material is added to the alumina material to lower the firing temperature compared to the general ceramic firing process.

On KOA's LTCC, silver (Ag) based paste that has low conductor resistance is co-fired to create the conductor patterns on each layer of the ceramic substrate.

It realizes the multilayer substrate with excellent low-loss electrical characteristics as well as high dimensional accuracy.

KOA's LTCC also provides downsizing by integrating resistors and transmission lines in the inner and surface layers of the substrate. In addition, the thermal expansion coefficient close to silicon enhances the reliability of the bare chip mounting, and the cavity structure contributes to the lower profile package.

high-precision specification

Substrates with higher precision based on the LTCC multilayer substrate are available.

- High-precision pad positioning and excellent flatness.
- High-density wiring structure by utilizing LTCC multilayer substrate.

Please contact us for details.

environmental applications

Characteristics of Substrate Material

Parameter	Characteristics
Bending Strength (MPa)	250
Thermal Expansion Coefficient ($\times 10^{-6}/K$)	5.5
Thermal Conductivity (W/m · K)	3
Insulation Resistance ($\Omega \cdot \text{cm}$)	$>10^{13}$
Dielectric Constant at 1GHz	6.6
Dielectric Loss at 1GHz	0.004
Density (g/cm^3)	2.8
Surface Roughness Ra (μm)	<0.4
Withstanding Voltage (kV/mm)	>15
Substrate Thickness (mm)	0.4~2.0 Standard
Layer Thickness ($\mu\text{m}/\text{Layer}$)	80, 100, 125 Standard

Standard Design Rules

Symbol	Parameter	Design Value
A	Line Width	0.06mm Min.
B	Line to Line Spacing	0.06mm Min.
C	Via Diameter	0.1mm, 0.15mm, 0.2mm
D	Via Pad Diameter	Via diameter +0.05mm Min.
E	Via to Via Spacing	0.2mm Min.
F	Via pad to Line Spacing	0.125mm Min.
G	Part Edge to Conductor Spacing	0.2mm Min.
H	Part Edge to Via Spacing	0.3mm Min.
J1, J2	Cavity Width	0.6mm Min.
K1, K2	Cavity Depth	0.1mm Min.
L	Wall Width of Cavity	0.5mm Min.
M	Shelf Width in the Cavity	0.5mm Min.

Conductor

Parameter	Characteristics
Material of Conductor	Ag
Resistivity of Conductor ($\mu\Omega \cdot \text{cm}$)	2.5
Surface Plating	Ni-Au, Ni-Pd-Au

Surface/Buried Printed Resistor

Parameter	Surface Resistor	Buried Resistor
Resistance Range (Ω)	10 ~ 100k	10 ~ 200k
Resistance Tolerance (%)	± 5	$\pm 20 \sim 50$

Surface layer - Inner layer

Cavity

* Please contact us for the use out of the standard design rules, and detailed design rules.

features

- Plural semiconductors in one package offers downsized system with high performance and standardization
- Wiring space saving by multilayer fine patterns on build-up substrate. No signal delay by shortened wiring distance
- Less mounting problem because of the decreasing number of the terminals

features

- Surface-mountable chip type test terminal
- Automatic mounting can be done by an ordinary chip mounter
- Inch size code 1206, 0805 and 0603 are available. (for size 1206, two kinds of the height 1.25mm and 2mm are provided.)
- Suitable for both flow and reflow solderings
- Since only the outside surface is solder-plated, the inside is structured unsolderable
- Products meet EU-RoHS requirements
- AEC-Q200 Qualified*

*Please contact us for details

dimensions and construction

surface mount resistors

Anti-Sulfur Precision Flat Chip Resistors

- RK73H1ERT-Kit1 (0402 chip size)**
122 values, 100 pcs each
- RK73H1JRT-Kit1 (0402 chip size)**
122 values, 100 pcs each

Precision Flat Chip Resistors

- RK73H1FTK001Kit (01005 chip size)**
38 values, Lead-free, 25 pcs each (10R0 ~ 620K = ±1%)
- RK73H1HTK001Kit (0201 chip size)**
217 values, Lead-free, 50 pcs each (0, 10R0 ~ 1M00 = ±1%)
- RK73H1ETK001 (0402 chip size)**
122 values, Lead-free, 100 pcs each (0, 10R0 ~ 1M00 = ±1%) E-24
- RK73H1JTK001 (0603 chip size)**
122 values, Lead-free, 100 pcs each (0, 10R0 ~ 1M00 = ±1%) E-24
- RK73H2ATK001 (0805 chip size)**
122 values, Lead-free, 100 pcs each (0, 10R0 ~ 1M00 = ±1%)
- RK73H2BTK001 (1206 chip size)**
122 values, Lead-free, 100 pcs each (0, 10R0 ~ 1M00 = ±1%)

General Purpose Flat Chip Resistors

- RK73B1FTK001Kit (01005 chip size)**
51 values, Lead-free, 25 pcs each (0, 10 ~ 1M = ±5%)
- RK73B1HTK001Kit (0201 chip size)**
139 values, Lead-free, 50 pcs each (0, 2R2 ~ 2M2 = ±5%)

High Voltage Flat Chip Resistors

- HV73TK001Kit (0603, 0805, 1206, 2010 chip sizes)**
156 values, Lead-free, 25 pcs each (10k ~ 10M = +1%)

Surge Current Flat Chip Resistors

- SG73TK001Kit (0603, 0805, 1206, 1210, 2010, 2512 chip sizes)**
204 values, ±10%, Lead-free, 25 pcs each
- SG73STK001Kit (0603, 0805, 1206, 1210 chip sizes)**
101 values, ±1%, Lead-free, 25 pcs each
- SG73PTK001Kit (0603, 0805, 1206, 1210 chip sizes)**
97 values, ±1%, Lead-free, 25 pcs each

Wide Terminal Flat Chip Resistors

- WK731JT-Kit1 (0306 chip size) (WK73R Series)**
73 values, Lead-free, 100 pcs each (±1%)
- WK732AT-Kit1 (0508 chip size)**
138 values, Lead-free, 100 pcs each (±1%)
- WK73TK001Kit (0612, 1020, 1225 chip sizes)**
64 values, Lead-free, 25 pcs each (±1%, ±5%)
- WK732BT-Kit1 (0612 chip size)**
145 values, Lead-free, 100 pcs each (±5%)
- NEW WK732HT-Kit1 (1020 chip size)**
145 values, Lead-free, 100 pcs each (±1%, ±5%)
- NEW WK733AT-Kit1 (2512 chip size)**
145 values, Lead-free, 200 pcs each +/-1%, +/-5%
- NEW WN73H1JT-Kit1 (0306 chip size)**
32 values, Lead-free, 100 pcs each (±0.1%)
- NEW WN73H2BT-Kit1 (0612 chip size)**
37 values, Lead-free, 100 pcs each (±0.1%)
- WU73TK001Kit (0612 chip sizes)**
27 values, Lead-free, 20 pcs each (±1%)

Circuit Protection - Fuses

- CCFTK001Kit (2410 chip size)**
18 values, Lead-free, 20 pcs each
- FuseKit-TF10BN (0402 chip size)**
12 values, Lead-free, 100 pcs each
- FuseKit-TF16SN (0603 chip size)**
14 values, Lead-free, 100 pcs each
- FuseKit-TF16AT (0603 chip size)**
13 values, Lead-free, 100 pcs each

Ultra Precision Flat Chip Resistor

- RN73H1ET-Kit (0402 chip size)**
49 values, Lead-free, 50 pcs each (±0.1%, 25ppm°C)
- RN73H1JT-Kit (0603 chip size)**
67 values, Lead-free, 50 pcs each (±0.1%, 25ppm°C)
- RN73H2AT-Kit (0805 chip size)**
73 values, Lead-free, 50 pcs each (±0.1%, 25ppm°C)
- RN73R1ET-Kit1 (0402 chip size)**
49 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)
- RN73R1JT-Kit1 (0603 chip size)**
67 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)
- RN73R2AT-Kit1 (0805 chip size)**
73 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)
- RN73R2BT-Kit1 (1206 chip size)**
74 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)
- RS73F1ET-Kit1 (0402 chip size)**
86 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)
- RS73F1JT-Kit1 (0603 chip size)**
121 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)
- RS73F2AT-Kit1 (0805 chip size)**
132 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)
- RS73F2BT-Kit1 (1206 chip size)**
138 values, Lead-free, 100 pcs each (±0.1%, 25ppm°C)

current sense resistors

Surface Mount Molded

SLW07TK001Kit (2010, 1W size)

27 values, 20 pcs each ($\pm 1\%$)

SLW1TK001Kit (2512, 1.5W size)

25 values, 20 pcs each ($\pm 0.5\%$)

SL1TK001Kit (2512, 1W size)

33 values, 20 pcs each ($\pm 1\%$)

SL2TK001Kit (4528, 2W size)

45 values, 20 pcs each ($\pm 1\%$)

SL3TK001Kit (4528, 3W size)

33 values, 20 pcs each ($\pm 1\%$)

SLN3TK001Kit (4528, 3W size)

32 values, 20 pcs each ($\pm 0.5\%$)

SLN5TK001Kit (4528, 5W size)

21 values, 10 pcs each ($\pm 0.5\%$)

TSL1TK001Kit (2512, 1W size)

33 values, Lead-free, 20 pcs each ($\pm 1\%$)

SLRTK001Kit (2513, 1W size)

40 values, 15 pcs each ($\pm 1\%$)

Metal Plate

TLR2ATK001Kit (0805 chip size)

6 values, 20 pcs each ($\pm 1\%$)

TLR2BWD-Kit (1206 chip size)

17 values, 15 pcs each ($\pm 1\%$)

TLR2HW-Kit (2010 chip size)

10 values, 15 pcs each ($\pm 1\%$)

TLR3APD-Kit (2512 chip size)

10 values, 20 pcs each ($\pm 1\%$)

TLRDK001Kit (1206, 2010, 2512 chip sizes)

36 values, Lead-free, complete range, 20 pcs each ($\pm 1\%$)

TLR2BP-Kit (1206 chip size)

17 values, 15 pcs each ($\pm 1\%$)

Chip Resistors

UR73TK001Kit (0402, 0603, 0805, 1206, 2010, 2512 chip sizes)

144 values, Lead-free, 20 pcs each ($\pm 1\%$)

UR73VTK001Kit (1206 chip sizes)

8 values, 20 pcs each ($\pm 1\%$)

Thick Film

SR731HTK001Kit (0201 chip size)

29 values, Lead-free, 50 pcs each (R47 ~ 10R0, $\pm 1\%$, $\pm 5\%$)

SR731ETK001Kit (0402 chip size)

25 values, Lead-free, 50 pcs each (R100 ~ 1R00, $\pm 1\%$)

SR731JK001Kit (0603 chip size)

49 values, Lead-free, 50 pcs each (R100 ~ 10R0, $\pm 1\%$)

SR732AK001Kit (0805 chip size)

49 values, Lead-free, 50 pcs each (R100 ~ 10R0, $\pm 1\%$)

SR732BK001Kit (1206 chip size)

49 values, Lead-free, 50 pcs each (R100 ~ 10R0, $\pm 1\%$)

SR732EK001Kit (1210 chip size)

49 values, Lead-free, 50 pcs each (R100 ~ 10R0, $\pm 1\%$)

SR732HK001Kit (2010 chip size)

49 values, Lead-free, 50 pcs each (R100 ~ 10R0, $\pm 1\%$)

SR733AK001Kit (2512 chip size)

49 values, Lead-free, 50 pcs each (R100 ~ 10R0, $\pm 1\%$)

world class quality

Successful companies recognize the value in selecting suppliers committed to total quality. KOA Speer has long embraced the principals of continuous improvement to attain new performance levels in every aspect of customer support. Our manufacturing programs redefine industry standards with defect levels measured in parts per billion. This organization-wide focus on quality resulted in our receiving ISO 9001:2015 certification. In addition, our quality program has received the more stringent IATF16949:2016 certification required to be a tier one supplier in the automotive industry.

customer programs

KOA Speer can play a vital role in helping your operation achieve maximum efficiency. Our sales/customer service representatives will meet with your design, production and purchasing teams to create a program that makes sense for your organization. Among the areas we regularly address are data entry and access through customized EDI, and inventory management through dock-to-stock and JIT programs. Our willingness to not only develop these programs but to execute them as promised, makes KOA Speer a dependable partner worth integrating into your operation.

responsive service

Providing products and answers when you need them is a fundamental policy at KOA Speer. Our 185,000 square foot warehouse features an automated material handling system based upon bar coding and radio frequency data communication (RFDC) to maintain an inventory of billions of components, while shipping millions of components per day. Standard product availability, the industry's most extensive electronic data interchange (EDI) program and a willingness to inventory to customer requirements, make KOA Speer JIT delivery an integral part of our customer's efforts at improving efficiency.
